

MEMORANDUM OF AGREEMENT
AMONG THE NATIONAL CEMETERY ADMINISTRATION OF THE U.S. DEPARTMENT OF
VETERANS AFFAIRS, THE TONAWANDA SENECA NATION, THE NEW YORK STATE
HISTORIC PRESERVATION OFFICE, AND THE ESTATE OF LEROY VEENENDAAL,
REGARDING ESTABLISHMENT OF A NEW NATIONAL CEMETERY AT AN
APPROXIMATELY 132-ACRE SITE LOCATED AT 1232 INDIAN FALLS ROAD, GENESEE
COUNTY, NY (SHPO Project Review No.12PR2608)

WHEREAS, in accordance with the Service Members Civil Relief Act, also known as the Veteran's Benefit Act of 2010, Public Law 111-275, Sec. 503, *Reports on Selection of New National Cemeteries* (Title 38, United States Code 2400), the National Cemetery Administration of the Department of Veterans Affairs (NCA) was directed to establish five new National Cemeteries, including a cemetery in western New York; and

WHEREAS, the proposed undertaking is described to be the acquisition, development and operation of a National Cemetery; and

WHEREAS, pursuant to authority granted by Title 38, United States Code, Section 2406, NCA proposes to purchase an approximately 132-acre parcel of land ("property") (Attachment 1) from the Estate of Leroy Veenendaal ("Landowner") for the purpose of establishing the new National Cemetery; and

WHEREAS, NCA has determined the area of potential effect (APE) to be the 132-acre parcel, the same as the purchase area; and

WHEREAS, NCA has determined there are archeological sites within the APE that may be eligible for the National Register of Historic Places under Criterion E (historic properties), and the likely presence of cultural artifacts may qualify the site as a Traditional Cultural Property; and

WHEREAS, NCA is in the process of implementing the Data Recovery Plan (DRP) (Attachment 2), as accepted by the New York State Preservation Office (SHPO) on October 30, 2013, resulting in recovered artifacts and records; and

WHEREAS, NCA has acknowledged the proposed undertaking will result in an adverse effect to the historic properties within the APE; and

WHEREAS, NCA has consulted with the SHPO and The Seneca Nation of Indians of New York (SNI) and the Tonawanda Seneca Nation (TSN) in accordance with Section 106 of the National Historic Preservation Act, 16 U.S.C. § 470 (NHPA), and its implementing regulations, 36 CFR Part 800.6(b)(1)), as well as Executive Order 13175; and

WHEREAS, pursuant to 36 CFR 800.6(a)(1), NCA notified the Advisory Council on Historic Preservation (ACHP) of the adverse effect finding, and the Council declined to participate in consultation; and

WHEREAS, pursuant to 36 CFR 800.6(c)(3), NCA has invited TSN to sign this Memorandum of Agreement (MOA) and SNI to concur; and

WHEREAS, all parties recognize that time is of the essence, and in order to allow for execution of the MOA prior to March 1, 2014, all parties will work in good faith to complete responsibilities under this agreement, where possible, in a timely manner and expedite reviews as is feasible;

NOW, THEREFORE, all parties agree that upon NCA's decision to proceed with the Undertaking, NCA shall ensure that the following stipulations are implemented in order to mitigate the adverse effects of the Undertaking on historic properties, and that these stipulations shall govern the Undertaking and all of its parts until this MOA is terminated. This MOA applies to the initial development of the property identified as Early Turnover and Phase 1.

1) Definitions.

- a) "Items of cultural value to the Nation" is defined as here as all aspects of the human environment that have historical, architectural, archaeological, or cultural significance, including, but not limited to, historic properties, archaeological resources and data, Native American ancestral remains and cultural items, religious places and practices, historical objects and artifacts, historical documents, and community identity.

2) Stipulations.

a) Stipulations of NCA.

- i. All of the following stipulations within Section 1, Part a, are contingent upon acquisition of the property, which remains at the sole and absolute discretion of NCA.
- ii. NCA shall ensure that funds in the amount of \$5,000.00 will be available to TSN for two years following closing on the property in order to fund community education activities associated with the artifacts removed from the site.
- iii. NCA shall ensure delivery of the recovered artifacts and associated records to the TSN within two years following closing on the property.
- iv. Nothing in this agreement shall be construed to diminish NCA's responsibilities to TSN under Federal law.
- v. NCA shall comply with Attachment 5 in the event human remains or artifacts that are or may be Haudenosaunee Medicine Masks, or Sacred Objects, or items of cultural value to the Nation are discovered during design, construction, or operation.
- vi. NCA agrees to accept an onsite cultural monitor designated by TSN as necessary to ensure that proper protocols are followed during the construction phase of the undertaking during specific times when excavation or earthwork ground disturbance construction activities of a depth in excess of 36" are occurring. The 36" depth is based on cryoturbation and areas that have been mechanically excavated during Phase III Archeological Evaluations, and agricultural use.

- vii. NCA agrees to pay such a monitor, subject to the availability of appropriated funds, at the prevailing rates applicable to similar monitoring activities under the NHPA. The cost to NCA shall not exceed \$26,000.00. NCA agrees to follow reasonable recommendations of the cultural monitor with regard the steps necessary to protect the integrity and condition of Indian artifacts that may be discovered during the construction of the undertaking.
- viii. All other construction activities (including shallow excavation or earthwork ground disturbance construction activities of depth less than 36"), would not require a cultural monitor except if an inadvertent discovery of cultural resources were to occur. In the event of an inadvertent discovery of human remains or artifacts that are or may be Haudenosaunee Medicine Masks, Sacred Objects, or Items of cultural value to the Nation during such construction, NCA shall comply with Attachment 5. NCA will immediately stop work in the area of the discovery and, within 36 hours, contact TSN to determine appropriate next steps. NCA could continue work in other areas of the property so long as there is no direct interference with the site identified. If TSN so requests in writing, NCA will cease all activities on the property, in order to facilitate the performance of any ceremonies regarding the discovery.
- ix. If TSN incurs travel costs to facilitate the participation of Haudenosaunee leaders in ceremonies to remediate any disturbance to such human remains or artifacts, NCA shall be responsible for such reasonable travel costs, not to exceed \$2,000.00.
- x. NCA will develop an excavation or earthwork ground disturbance construction monitoring schedule that will be updated approximately every 6 weeks and provided to TSN to identify availability. If TSN has expressly agreed that for a particular phase of the undertaking, a cultural monitor is not necessary or not available, NCA may proceed without a monitor.
- xi. Following completion of the construction, during normal operations of the cemetery there is minimal undisturbed ground being excavated due to the pre-placement of crypts during initial construction. In the event of an inadvertent discovery of human remains or artifacts that are or may be Haudenosaunee Medicine Masks, or Sacred Objects during operation of the cemetery, NCA shall comply with Attachment 5. In the event of an inadvertent discovery of a cultural resource that is not subject to Attachment 5 during normal cemetery operations, NCA will contact TSN, the Seneca Nation of Indians, and the New York State Historic Preservation to determine appropriate next steps

b) Stipulations of SHPO.

- i. SHPO agrees to work in good faith to provide expedited review, and concurrence or comments, on NCA submissions.

- ii. SHPO agrees to respect the procedures and policies set forth in Attachment 5 and the Haudenosaunee Policies and Practices on Human Remains and Cultural Properties.

c) Stipulations of TSN.

- i. TSN agrees to enter into a curation agreement (Attachment 3), under which it will agree to hold all right, title, ownership, claim, and responsibility for the curated artifacts.
- ii. TSN agrees to serve as a repository of the artifact collection and associated documentation resulting from the archaeological study (OPRHP No. 12PR2608) at no cost to NCA.
- iii. TSN agrees that, upon written request and subject to TSN staff and facility availability, the collection will be made available to qualified professional researchers on a temporary basis for non-destructive forms of analysis, as determined by TSN in its sole discretion.
- iv. TSN will provide for the professional care and management of the artifacts and associated documentation deposited under this agreement in accordance with its laws and customs. The conveyance of the artifact collection and documentation is a donation by the landowner. In the event TSN determines it no longer wishes to hold and maintain the collection, TSN will allow the Seneca Nation of Indians of New York or another Haudenosaunee Nation the right of first refusal. In the event that neither the Seneca Nation of Indians of New York nor another Haudenosaunee Nation agrees to maintain the collection, TSN will work with SHPO to identify a suitable entity to maintain the collection.
- v. TSN agrees that the artifact collection will not be loaned to any person without a written agreement specifying the conditions of the loan
- vi. TSN agrees to make available a monitor based on the construction monitoring plan. If an onsite monitor is not available TSN will make available a monitor via an on-call scenario via email or phone.
- vii. TSN agrees that if an onsite or on call monitor is not available, or if NCA receives no response regarding an inadvertent discovery within 72 hours of completion of the notice protocol by NCA per the terms of Attachment 5, NCA will be allowed to continue work. NCA will take all necessary actions to ensure that the area is protected and that no cultural resources are negatively affected.
- viii. 8. Insurance. TSN shall obtain at their own cost and expense, and keep in full force and effect, during the term of their access upon the Property, a comprehensive general liability insurance policy in an amount not less than One Million Dollars (\$1,000,000.00) combined single limit for bodily injury, death and property damage arising out of any one occurrence. The policy or policies required hereunder shall be issued by insurance companies qualified to do business in the state and such policy or policies shall provide at least twenty (20) days' notice to NCA before cancellation or

material modification. TSN shall provide NCA certificates of such insurance evidencing the coverage in force as of the commencement date of the on-site monitoring, as well as any replacement certificates issued during the Term of this MOA.

d) Stipulations of Landowner.

- i. Landowner shall allow for site work to continue per the terms of the Site Access Agreement (Attachment 4) between Landowner and VA, until site work is complete or title transfers to VA (whichever occurs sooner);
- ii. Landowner will execute the attached curation agreement, and thereby relinquishes all right, ownership, future ownership or claim to all artifacts discovered on or under the site.

3) Dispute Resolution.

- a) Should any party to this agreement object in writing to NCA regarding any action carried out or proposed with respect to the Undertaking or implementation of this agreement, NCA shall consult with the objecting party to resolve the objection. If after initiating such consultation NCA and the objecting party together determine that the objection cannot be resolved through consultation, NCA shall forward all documentation relevant to the objection to the ACHP, including NCA's proposed response to the objection. Within 30 days after receipt of all pertinent documentation, ACHP shall exercise one of the following options:
 - i) Advise NCA that ACHP concurs in NCA's proposed response to the objection, whereupon NCA will respond to the objection accordingly;
 - ii) Provide NCA with recommendations, which NCA shall take into account in reaching a final decision regarding its response to the objection; or
 - iii) Notify NCA that the objection will be referred for comment pursuant to 36 CFR 800.7(a)(4), and proceed to refer the objection and comment. NCA shall take the resulting comment into account in accordance with 36 CFR 800.7(c)(4) and Section 110(f) of NHPA.
- b) Should ACHP not respond within 60 days after receipt of all pertinent documentation, VA may assume ACHP concurrence in its proposed response to the objection.
- c) NCA shall take into account any Council recommendation or comment provided in accordance with this stipulation with reference only to the subject of the objection; NCA's responsibility to carry out all actions under this agreement that are not the subjects of the objection shall remain unchanged.
- d) At any time during implementation of the measures stipulated in this agreement, should an objection pertaining to this agreement or the effect of the undertaking on historic properties be raised by a member of the public, NCA shall notify the parties to this

agreement and take the objection into account, consulting with the objector and, where appropriate, with any of the parties to this agreement to resolve the objection.

- e) In the event of a conflict between the Data Recovery Plan and this MOA, the terms and conditions of this MOA shall govern.

4) Execution, Modification and Termination.

a) If NCA determines it is not in the Federal Government's best interest to acquire the property, or if the terms of this agreement have not been implemented by December 31, 2015, this agreement shall be considered null and void. In either such event NCA shall immediately notify in writing the parties to this agreement, and if it chooses to continue with the undertaking, shall re-initiate review of the undertaking in accordance with 36 CFR Part 800.

b) This MOA constitutes the entire agreement between the parties hereto and may not be modified or amended except by instrument in writing signed by the parties hereto, and no provisions or conditions may be waived other than by a writing signed by the party waiving such provision or condition.

c) This MOA may be executed in any number of counterparts and any party hereto may execute any such counterpart, each of which when executed and delivered shall be deemed to be an original and all of which counterparts taken together shall constitute but one and the same instrument. This agreement shall become binding when all counterparts taken together shall have been executed and delivered by all of the parties. The parties hereto agree that facsimile transmission, or e-mail transmission of a scanned original signature shall constitute and be accepted as an original signatures.

d) Any party to this MOA may propose to NCA that the MOA be amended, whereupon NCA shall consult with the other parties to this agreement to consider such an amendment. 36 CFR 800.6(c)(1) shall govern the execution of any such amendment.

e) If NCA determines that it cannot implement the terms of this MOA, or if another party to this MOA determines that it cannot implement the terms of this MOA or that the MOA is not being properly implemented, such party may propose to the other parties to this MOA that it be terminated.

f) The party proposing to terminate this MOA shall so notify all parties to this MOA, explaining the reasons for termination and affording them at least 30 days to consult and seek alternatives to termination. The parties shall then consult.

g) Should such consultation fail, NCA or any other signatory to this MOA may terminate the MOA by so notifying in writing all parties.

h) Should this MOA be terminated, NCA shall either:

- i. Consult in accordance with 36 CFR 800.6 to develop a new agreement;
or
- ii. Request the comments of the Council pursuant to 36 CFR 800.7.

6) Scope and Related Agreements.

- i. Nothing within this MOA alters the rights or responsibilities of the parties to the Offer to Sell contract, entered into by U.S. Department of Veterans Affairs and landowner on September 11, 2012, and as amended on June 26, 2013, or the attached curation agreement, between TSN and the landowner.
 - ii. Nothing within this MOA shall be construed to provide NCA with any right, ownership, future ownership, claim, or responsibility for the artifacts or documentation related thereto.
-
1. Nothing in this MOA shall be construed to diminish TSN's sovereignty. Nothing herein shall be construed to waive TSN's sovereign immunity under Federal law, nor shall it be construed to waive any sovereign immunity extended by Federal law to TSN's Council of Chiefs, Clan Mothers, or employees.

Execution of this MOA and implementation of its terms evidence that NCA has afforded the Council an opportunity to comment on the proposed undertaking; and that NCA has taken into account the adverse effects of the acquisition, development and operation of a National Cemetery in Western New York on historic properties.

1. Introduction

The U.S. Department of Veterans Affairs (VA) is considering the establishment of a cemetery on Allegheny Road in East Pembroke, Pembroke Township, Genesee County, New York. To assist in completing its obligations under Section 106 of the National Historic Preservation Act to identify historic properties, the VA contracted with Commonwealth Cultural Resources Group, Inc. (CCRG). A Phase 1 cultural resource survey revealed the presence of archaeological materials in the tract (Peltier 2012), and the State Historic Preservation Office (SHPO) concurred with CCRG's recommendation that a Phase 2 investigation be undertaken. CCRG's Phase 2 field investigations of the prehistoric cultural deposits at the proposed VA cemetery began on April 15, 2013 and were concluded on June 24, 2013. Michael L. Kagelmacher served as Principal Investigator and Field Director. Field technicians included Martin Boratin, Kyle Brock, Tony Bonn, Paul Jensen, Sigmund Anteck, Joe Kline, Vivian Honsinger, Jackie Damon, Dan Whalen and James Wasiura. The project was monitored by Justin Abrams of the Tonawanda Band of Seneca Indians. This report presents the initial findings from the Phase 2 investigations and documents the proposed Phase 3 methodology and Data Recovery Plan (DRP).

The Area of Potential Effect (APE) consists of 130+/- acres east of Allegheny Rd., between the I-90 and Indian Falls Rd. It had previously (Phase 1 investigations, Fall of 2012) been found to contain several prehistoric lithic scatters of varying spatial extent, most of which were concentrated in Area F, a large agricultural field that had been planted with soybeans and, more recently, winter wheat (Figure 1). One of the largest clusters of artifacts, covering approximately 2 acres and located in the northeast corner of Area F, was found during Phase 1 investigations to include projectile points of Genesee (Late Archaic period) and Meadowood (Early Woodland period) types (Ritchie 1971). A total of 593 prehistoric artifacts were recovered during Phase 1 investigations, including projectile points, bifaces/fragments, and chert debitage.

Several other large clusters (approximately 1-5 acres in extent) of artifacts were apparent in Area F from the results of Phase 1 investigations, the largest being in the southeast corner of the field. Other large clusters were noted in the southwest and central portions of the field, as were numerous scattered finds of a more isolated nature within the field.

Eighteen additional prehistoric find spots were located elsewhere within the APE (i.e. outside Area F, the wheat field), in Areas A, B, D, E and G, and consisted mostly of 1-3 chert flakes each. Based on the Phase 1 results, CCRG recommended that Phase 2 investigations be undertaken. The SHPO concurred with that recommendation.

2. Initial Findings of Phase 2 Investigations

CCRG's Phase 2 field investigations consisted largely of close-interval (20ft) and radial shovel testing around previous Phase 1 prehistoric find spots, in order to determine the spatial extent, distribution, and relative artifact density of prehistoric sites within the APE. The majority of Phase 2 field time was spent shovel testing in close-interval grids around Phase 1 find spots in Area F. Radial shovel tests were also placed around 15 find spots south of Area F (in areas A, B, D and E) and 3 find spots north of Area F (in Area G and in the vicinity of the former farmhouse). Aside from Area F, all previous prehistoric finds in

Areas A, B, D, E and G appear to be small single-use lithic scatters of short temporal duration and minimal spatial extent, generally featuring relatively lesser-quality and earlier stage reduction flakes.

At the beginning of Phase 2 investigations, 5 foot metal u-posts were placed at 300 foot intervals across Area F, to define investigation Blocks A-P. Using 300-foot tape measures, a 20 foot close-interval grid could thus quickly be established anywhere in the field. In blocks A, D, E, and P, all or nearly all possible shovel tests were excavated, to define the boundaries of the largest clusters. Partial grids were placed over several other blocks in a similar fashion, with boundaries generally defined by the presence of double negative shovel tests around the outskirts of a cluster of positive shovel tests.

Several of the stray lithic finds in the northern portion of Area F were initially subjected to radial testing to determine the presence or absence of additional cultural material. When many of these tests were found positive, it was decided that radial testing elsewhere would be abandoned in favor of placing close-interval grids around all of the stray finds in Area F. In general, as positive Phase 1 shovel tests were relocated among the growing wheat, each was initially encompassed by a 5x5 grid of 20ft close-interval shovel tests. As with the larger clusters, these smaller grids were generally terminated as double negative shovel tests were achieved. In several cases, this resulted in the discovery of additional artifact clusters up to 100 feet across (Figures 2 and 3).

When Phase 2 investigations began, the wheat crop was approximately 1-2 inches in height. After the seeding of the field and subsequent winter melt, numerous artifacts were apparent on the surface at the beginning of Phase 2 field investigations, particularly in the vicinity of the largest clusters of positive Phase 1 shovel tests. Of the approximately 6,000 total artifacts recovered during Phase 2 investigations, approximately 25 percent were surface finds, which were recorded separately in relation to the nearest shovel tests. The Phase 2 surface finds included numerous bifaces and biface fragments, a formal count of which will be available at the conclusion of the debitage and tool analysis. As the wheat crop grew, surface visibility gradually diminished, especially as close-interval grids were being placed around the more isolated finds in Area F.

Though a formal analysis of the chert tools and debitage has not yet been undertaken, rough counts indicate approximately 6,000 artifacts were recovered during Phase 2 investigations. These include numerous bifaces and biface fragments, as well as several projectile points or point fragments. Most notably, a Meadowood Point and a Genesee-like point fragment, similar to those found during Phase 1 in what would become Block A, were recovered on the surface in Blocks E and D, respectively. A drill fragment was also recovered in Block E, and what appears to be an unfinished Late Woodland triangular point was recovered from Block J.

Based on the initial results of the Phase 2 investigations, NYSHPO has recommended a Phase 3 Data Recovery at the Indian Falls V.A. Precontact Site (A03712.000035).

3. Phase 3 Data Recovery Research Questions

A Phase 3 Data Recovery at the Indian Falls V.A. Precontact Site (A03712.000035), including a surface inspection and subsequent mechanical stripping of a portion of the topsoil in Area F to explore for

subsurface features, would be intended to address specific research questions pertaining to site function as well as timing of occupation, and would allow the site to be placed within the broader contextual framework of the Late Archaic and Early- to Late-Woodland settlement patterns of the surrounding area. These questions include the following:

1. What are the boundaries and spatial dimensions of the site(s) or artifact clusters in Area F? (This question has been partly addressed during Phase 2 close-interval shovel testing.)
2. What is the functional relationship (if any) between the various artifact clusters in Area F?
3. What is the temporal relationship between the various artifact clusters in Area F?
4. What environmental factors attracted prehistoric inhabitants to the site over the course of multiple cultural periods and over several thousand years?
5. How do the site and its various artifact clusters fit into the broader cultural/temporal context of known prehistoric sites and settlement patterns in the surrounding area?

The data provided by a Phase 3 surface inspection has the potential to add to our understanding of site boundaries in Area F, which to this point is based largely on the results of Phase 2 close-interval shovel testing. Lithic data produced by a surface inspection may also provide further insight into the function of the various artifact clusters and help to determine whether they represent separate temporal occupations or concurrent and temporally-related activity stations of varying function.

A formal surface inspection, which is typically conducted at the beginning of Phase 2 investigations, also offers a high potential for the recovery of additional temporally diagnostic artifacts, such as projectile points. This may allow a cultural age to be assigned to clusters within which no diagnostic artifacts have yet been found, and it may also allow for the identification of further cultural manifestations (e.g. additional diagnostic projectile point or tool types) not yet identified at the site.

Phase 3 mechanical stripping would provide an opportunity to explore for subsurface features and thus has the potential to further our understanding of the environmental factors that attracted prehistoric inhabitants to the area. These might include proximity to water-based resources, the presence of lithic raw materials, or the presence of seasonal food resources (game, nuts, etc.). As well, subsurface features (such as hearths) may provide datable carbon samples, which could potentially shed light on the temporal relationship between the various clusters and also allow the site to be better understood in a temporal context relating to other known prehistoric sites in the area.

4. Proposed Phase 3 Field Methodology and Schedule

Due to the number and distribution of prehistoric artifacts recovered in Area F during Phase 1 investigations, Phase 2 close-interval testing in this field (which began in April) would normally have been preceded by plowing, disking, and a surface inspection of the field, and followed by the placement of up to 30-40 excavation units (1 x 1 meter each). In order to avoid damage to the already-planted wheat

crop in Area F, and to avoid a delay to the project, the VA, CCRG, and the SHPO agreed to postpone a surface inspection until after the close-interval testing and mid-July harvest. Such a surface inspection would further our understanding of the distribution of sites or activity areas within the APE, and would have the potential to produce additional temporally-diagnostic artifacts, such as those found in the northeast corner of the field during Phase 1, in association with other clusters of artifacts.

Many of the more isolated Phase 1 prehistoric finds in the wheat field (Area F) were initially thought to be the result of plow-dragged specimens from the larger clusters. By early June of 2013, close-interval and radial shovel testing in the wheat field had revealed a larger than expected number of separate small clusters of artifacts around several of these more isolated finds.

After consultation with New York State SHPO and the VA, and in order to more adequately define site boundaries within the APE, it was determined in early June that the best course of action would be to forgo placing the planned 1m x 1m excavation units in favor of additional shovel test grids around the more isolated finds in Area F. Excavation units would have provided an opportunity to explore for subsurface features, with the potential for additional diagnostic artifacts as well as the potential for radio-carbon dates, but it was determined that this research potential could be addressed in a less labor-intensive way through mechanical stripping, which along with the postponed surface inspection would then be considered a Phase 3 investigation.

It is recognized that the project has not followed the classic trajectory of discovery, evaluation, and data recovery. Schedule concerns and avoidance of crop damage have forced the VA, CCRG, and the SHPO to modify the normal sequencing of tasks. The Section 106 compliance process is meant to be flexible, to respond to the demands of specific undertakings, and the present project displays that flexibility. The SHPO, VA, and CCRG have agreed that with the completion and reporting of the proposed Phase 3 investigations, the research potential of the site will have been achieved, and that further investigations (barring late discoveries) will not be necessary.

In interpreting lithic-dominated sites partially or completely in plowzone contexts, it is important to collect several key data sets. Certain of these data sources have been addressed during the Phase 2 investigation, and the proposed Phase 3 study will be focused on two tasks: 1) controlled surface collection of Area F, to provide a more comprehensive sample of the plowzone artifacts; and 2) machine-assisted removal of the plowzone from a sample of Area F to determine if cultural features are present, and to excavate such features.

Immediately after the harvest of the wheat crop, and prior to mechanical stripping, CCRG proposes to plow and disk the entire wheat field (Area F, approximately 40 +/- acres). After a weathering period of about 2 weeks, during which the site would be monitored by a field technician to deter looters and artifact collectors, Area F would then be subjected to a surface inspection lasting 5 days. This would afford the potential opportunity to recover additional diagnostic artifacts or tools, and may add to our understanding of the distribution of artifacts and/or sites across the field.

At the conclusion of a Phase 3 surface inspection, an End-of-Field letter (EOF) will be prepared and forwarded to the SHPO and the Nations (the Tonawanda Seneca Nation and the Seneca Nation of

Indians). This EOF will include a map showing the proposed mechanical stripping locations, and will provide an opportunity for additional consultation before a portion of the site is permanently removed through mechanical stripping.

In order to better address questions concerning site function and timing of prehistoric occupations within the APE, CCRG then proposes to mechanically strip the topsoil from an area approximately 1 acre in extent within Area F over a period of 10 days. This is equivalent to approximately half of one of the 300ft x 300ft grid blocks. Stripping would be accomplished by placing 9 "windows", of approximately 50ft x 100ft each, in and around the various concentrations identified during Phase 2 close-interval shovel testing, in order to explore for subsurface features. Two or 3 of these windows may be split into two 50ft x 50ft windows and used to investigate areas in the vicinity of the smaller clusters. Specific locations of the areas to be stripped will be determined based on artifact density (including high and low density areas), location of tools (projectile points, bifaces, etc.), and apparent site boundaries.

A total of 15 days over three weeks (pending weather) would be spent in the field for Phase 3 investigations once the harvest is concluded and the field plowed/disked/weathered. Five days would be spent on surface inspection of Area F (the wheat field), and following the completion and approval of the EOF, nine days would be spent on mechanical stripping of nine windows in Area F (approximately 50ft x 100ft each) to explore for subsurface features, and one day would be left for cleanup and to address any remaining features. A tribal monitor from the Tonawanda Senecas will be on site during plowing, surface inspection, and mechanical stripping.

A Phase 3 Management Summary will be issued within two weeks of completion of the field work. Upon SHPO review and acceptance of the Management Summary, the tract will be cleared for construction activities, with the understanding that a complete Phase 3 report will be issued within one calendar year of completion of the field work.

The Phase 3 study would include laboratory processing and analysis of all artifacts recovered during Phase 2 and 3. If features are encountered, the analysis will include zooarchaeological and ethnobotanical analyses. Up to three samples will be submitted for radiocarbon assay. The reporting and curation preparation will follow the guidelines established by Section 14.09 of the New York State Historic Preservation Act of 1980 and Section 106 of the National Historic Preservation Act of 1966. At the conclusion of reporting, any recovered artifacts will be curated by the Tonawanda Senecas at a permanent artifact repository that is currently in the planning stages.

NYSHPO recommends that the Indian Falls V.A. Precontact Site (A03712.000035) is National Register eligible under Criterion D (information potential) and has concurred with the Phase 3 archaeological testing methodology proposed above.

Tonawanda Seneca Nation**

Effective Date: March 28, 2013

The Council of Chiefs, Tonawanda Seneca Nation (TSN) agrees to serve as a repository of the artifact collection and associated documentation resulting from the archaeological study conducted for the Western New York National Cemetery project, located at 1232 Indian Falls Road, Town of Pembroke, Genesee County, New York (OPRHP No. 12PR2608). The TSN will provide for the professional care and management of the artifacts and associated documentation deposited under this agreement. The transfer of the assemblage is considered a donation, as the collection will be permanently curated with the TSN.

Curation of artifacts requiring special environmental conditions, such as waterlogged materials, or particularly fragile or unstable materials will be discussed with the TSN prior to submittal. All materials submitted to the TSN for curation will be prepared in accordance with the procedures outlined in *Standards for Cultural Resource Investigations and the Curation of Archaeological Collections in New York State* as required by the Office of Parks, Recreation, and Historic Preservation and in accordance with the New York Archaeological Council specifications (NYAC 1994).

ACCESS AGREEMENT

PROPERTY ACCESS AGREEMENT

This Property Access Agreement ("Agreement") is made and entered into this September day of 11, 2012 by and between Estate of Leroy Veenendaal who has address of 104 Bank Street, Batavia, NY 14020 (Owner") and the U. S. Department of Veterans' Affairs, a federal agency with an address of 810 Vermont Ave., Washington, DC 20420 ("Government").

Whereas, the Owner is the owner of certain real estate, consisting of approximately 132.5 acres of land, with improvements located thereon, situated in the State of New York in Genesee County, with an address of 1232 Indian Falls Road, Pembroke, New York, (hereinafter the "Property").

Whereas, Government has requested permission from Owner to enter the Property to appraise the value of the Property, to perform surveys, and to conduct engineering tests and studies, make test borings, and carry out such other exploratory investigations (collectively, the "Due Diligence") as may be reasonably necessary to complete the due diligence investigations of the Property.

Whereas, Owner is willing to give Government permission to enter the Property for the purpose of performing due diligence activities.

NOW, THEREFORE, in consideration of the foregoing, certain valuable non-monetary consideration, and of agreements hereafter contained, the Owner hereby grants to Government a license to enter the Property subject to terms and conditions set forth herein.

1. Purpose of Entry. The Government by its duly authorized officers, employees, agents and duly authorized employees of its contractors and subcontractors, may enter the Property at any reasonable time during the Term (as defined below) of this Agreement, as hereinafter described, solely for the purpose of performing due diligence activities.

2. Government's Responsibilities. Government shall be responsible for all costs associated with all such activities and shall leave the Property in the condition in which Government or Government's contractors, agents or representatives found it. Government shall not permit any liens to attach to the Property by reason of the exercise of Government's rights hereunder. All tools, equipment, buildings, improvements, and other property taken upon or placed upon the land by Government shall remain the property of Government and must be removed by Government prior to the expiration of this Agreement.

3. Term. The term of this license shall commence upon the date of execution of this Agreement and shall expire on February 15, 2013 (the "Term") except if a subsequent agreement between the parties respecting an offer by the Owner to sell the Property to the Government is accepted by the Government then the term of this license MAY BE EXTENDED as set forth in the subsequent agreement.

4. Compliance with Law. Government shall perform due diligence activities at Government's expense and in compliance with all applicable laws, ordinances and regulations and obtain at Government's own expense all permits, licenses, certificates and approvals required to perform due diligence activities.

5. Notice to Owner. At least five (5) business days prior to commencing Due Diligence, Government shall provide the Owner with notice of the commencement, and shall include a brief description and an estimated schedule for completion.

6. Security of Site. The Due Diligence shall include reasonable security measures, to minimize the risk of property damage or bodily injury at or in the vicinity of the site as the result of due diligence investigations.

7. Condition of Site. Government shall repair any damage to the Property caused by performing due diligence activities and shall leave the Property in substantially the same condition as existed when the Government entered the Property.

8. Insurance. Government is a self-insured instrumentality of the United States of America. Government's contractors and any and all subcontractors (hereinafter contractors) shall obtain at their own cost and expense, and keep in full force and effect, during the term of their access upon the Property, a comprehensive general liability insurance policy in an amount not less than One Million Dollars (\$1,000,000.00) combined single limit for bodily injury, death and property damage arising out of any one occurrence, protecting the Owner against any and all claims for bodily injury, death or property damage arising directly or indirectly from Government's use of the Property. Such policy or policies shall name the Owner as an additional insured. The policy or policies required hereunder shall be issued by insurance companies qualified to do business in the state and such policy or policies shall provide at least twenty (20) days' notice to the Owner before cancellation or material modification. The Government's contractors shall deliver to the Owner certificates of such insurance evidencing the coverage in force as of the commencement date of this Agreement, as well as any replacement certificates issued during the term of this Agreement.

9. Owner's Representation. Owner hereby represents and warrants that it is the owner of the Property and has the right to grant the Government permission to enter upon the property and perform Due Diligence.

10. Termination. The license granted pursuant to this Agreement may be terminated by Owner or Government by providing written notice to the other party. Upon any such termination, the Government shall have continued access to the Property for a reasonable and sufficient period of time to permit Government to complete any necessary repairs as set forth in Paragraph 7 of this Agreement.

11. Notices. Any notice permitted or required to be given under this Agreement shall be in writing and shall be deemed to be duly given if delivered certified mail, return receipt requested, to the party entitled to such notice as set forth hereinabove, with a copy to:

12. Third Parties. The license granted to Government under this Agreement is a personal privilege of Government and shall not be transferred or assigned except as provided in Paragraph 1 hereof. Nothing in this Agreement, whether express or implied, is intended to relieve or discharge the obligation or liability of any third persons to either party to this Agreement, nor will any provision give any third persons any right of subrogation or action over against either party to this Agreement.

13. Applicable Law: Entire Agreement. This Agreement shall be construed and enforced in accordance with and governed by the laws of the United States of America. The terms and conditions of this Agreement, together with the terms and provisions of all documents referred to herein, constitute the full and entire Agreement between the parties affecting the rights and obligations contained herein. No other agreement or understanding concerning the same has been entered into or will be recognized. Neither party has made inducements nor representations to the other except as expressly stated in

this Agreement. No amendments or modifications of this Agreement shall have any force or effect without the written consent of both parties.

Notwithstanding anything in this Agreement, any provision that purports to assign liability to the United States Government shall be subject to and governed by Federal law, including but not limited to, the Contract Disputes Act of 1978 (41 U.S.C. Sections 601-613); the Anti-Deficiency Act (31 U.S.C. Sections 1341 and 1501); and the Federal Tort Claims Act (28 U.S.C. Section 2671, et seq.).

14. Counterparts. This Agreement may be executed in counterparts, and it shall not be necessary that the signatures of all parties hereto be contained on any one counterpart hereof; each counterpart shall be deemed an original, but all of which together shall constitute one and the same instrument.

IN WITNESS WHEREOF, the parties have hereunto set their hands and seals on the date first above-written.

AMENDMENT TO PROPERTY ACCESS AGREEMENT

This AMENDMENT TO PROPERTY ACCESS AGREEMENT ("Amendment") is entered into as of this 13 day of September, 2013, by and between Estate of Leroy Veensidaal, with an address of 104 Bank Street, Batavia, NY 14020 ("Owner") and THE UNITED STATES OF AMERICA FOR AND ON BEHALF OF THE DEPARTMENT OF VETERANS AFFAIRS, a Federal agency ("Government").

Witnesseth:

WHEREAS, the parties entered into a Property Access Agreement dated September 11, 2012 ("Agreement"); and

WHEREAS, the Agreement expired on February 15, 2013 as described in paragraph 3 of the Agreement; and

WHEREAS, following the expiration of the Agreement, Government continued to access the Property as provided in the Agreement with no objection by Owner; and

WHEREAS, Government intends to continue due diligence activities on the Property as described in the Agreement in an effort to purchase the Property; and

WHEREAS, the parties desire to amend paragraph 3 of the Agreement to provide that the Agreement shall expire on December 31, 2013.

NOW THEREFORE, the parties agree to amend the Agreement as follows:

1. The expiration of the Agreement, noted in Paragraph 3, is hereby amended to be December 31, 2013.
2. All other terms and conditions of the Agreement shall remain in full force and effect.

IN WITNESS WHEREOF, the parties have executed this Amendment as of the date first above written.

Attachment 5

By this attachment, the Parties to the MOA incorporate by reference the 2002 Haudenosaunee Policies and Practices, attached, which lists Haudenosaunee sacred objects and provides background information regarding Haudenosaunee cultural practices.

Pursuant to the protocols outlined in the 2002 Haudenosaunee Policies and Practices, the parties agree that:

In the event Medicine Masks, Haudenosaunee Sacred Objects, or Human Remains are found on the site by NCA or any entity designated by NCA to conduct work or other activities on the site, such work will immediately cease and NCA or its designee will promptly contact the Nation. (See contact below). The Nation and NCA will work together to determine what steps must be taken, bearing in mind the fundamental principle that human remains should not be disturbed and that, in the event such disturbance is unavoidable, no human remains should be removed from the site without proper Haudenosaunee cultural protocols.

Part 4 Haudenosaunee Policies and Practices Today

4.1 Haudenosaunee Cultural Properties

Haudenosaunee culture shapes the behavior of its' members in deep and persistent ways, some times, even beyond the conscious control of the individual. It is a way of being, of acting, of reacting. Culture, therefore, is a way of thinking, a way of feeling, but also an intuitive way of problem solving and a unique way to express oneself in the world. The Haudenosaunee call all of this Ongwehoweka meaning all things that pertain to the way of life of the Original People.

Each generation defines for itself what its culture is, and these definitions may be different across the generations. Certainly there will be some underlying foundations that remain, but there are also new ways to express cultural values.

Identifying cultural properties for the Haudenosaunee must be done in a manner that is consistent with our culture. It must consider what is important to the Haudenosaunee. It is less about identifying a building or monument and more about identifying locations that have spiritual, cultural, and political significance to the Haudenosaunee. Appendix F is a listing of types of cultural properties that is of interest to the Haudenosaunee.

4.2 Haudenosaunee Policy on Human Remains

The Haudenosaunee Beliefs

We have been taught that we bury our dead into the ground so that their bodies can become part of the sacred Earth. We believe that we come from the Mother Earth and that the human remains that rest within the Earth are an important spiritual connection to the spirit of the Earth. The Earth is enriched by the dead as our flesh becomes part of the soil. The souls of the dead have a path of destiny that they must follow. We refer to this as their journey after life. In this way, we feel that the dead are around us and protects us as we hold our ceremonies or dances. We believe

2002 © Intellectual Property Rights of the Grand Council of the Haudenosaunee - Text cannot be used without the written consent of the Grand Council of the Haudenosaunee.

that the dead have power and it is dangerous to neglect the spiritual needs of the dead. The protection of the human remains and associated graves, sacred burial sites and related objects from the graves of the Haudenosaunee are the responsibility of each generation of Chiefs, Clan mothers, and Faithkeepers. We believe that the remains, the associated burial objects and the actual soil in which they rest is sacred. There is no acceptable excuse to justify the desecration of this sacred burial.

Violation of our Spiritual Rights

Removing the remains from their eternal resting place is a great desecration to both the dead and the living. The disturbance, destruction, and theft of the dead is a violation of the religious and spiritual welfare of the Haudenosaunee. As long as the human remains are disturbed, there will be spiritual consequences to our people. The desecration of the graves of our ancestors, no matter what the age of the burial, is a violation of our religious freedom. Permits issued by the State of New York or any other local government, to allow anyone to violate the sanctity of the graves of our ancestors can no longer be tolerated. In the past, our ancestors buried many objects along with the body with the belief that in the afterlife, you will need all of those things that you need in this life. All types of objects have been associated with burials, including decorated clothing, glass beads, shell beads, silver combs, tools and weapons, ceramic and metal cooking pots, wampum belts, strings of wampum, and a variety of personal items. The removal of these objects from the grave is a theft from the dead.

Violation of our Human Rights

The remains of our deceased relatives are not "archaeological resources" that are subjects of study. They are human beings who one lived on this land. They had real lives and feelings. They had spiritual expectations about their final resting places. To look at Native Americans as objects rather than as human beings is a gross violation of our human rights. All graves and burial sites, Native or other races, deserve respect. Our dead relatives deserve the basic human right to a dignified burial. We do not believe in the use of permanent headstones to mark graves of our ancestors and state law makes a difference between cemeteries and unmarked burials. Our burial sites deserve to be considered hallowed ground, whether they are marked or not. There has been double standard in dealing with our people and non-Native remains. Non-Native grave sites are often afforded more protection than Native burials. Despite the efforts of state agencies to identify Native grave locations, construction permits are issued nonetheless. Our dead relatives deserve the same right to an eternal resting place as all other races and religions.

Violation of our Treaty Rights

The unearthing of the remains of our ancestors from their eternal resting pace is also a violation of promises made to the Haudenosaunee under the terms of the Canandaigua Treaty of 1794. By

2002 © Intellectual Property Rights of the Grand Council of the Haudenosaunee - Text cannot be used without the written consent of the Grand Council of the Haudenosaunee.

that treaty, the United States, including the State of New York, promised not to "disturb" the Haudenosaunee in the free use and enjoyment of their lands. We have been on record protesting the desecration of our graves. The continual destruction of Native graves, the stealing of Native remains and the looting of burial objects causes us serious mental, emotional, and spiritual harm. Our people are continually upset by these events and we have been forced to adjust our spiritual traditions to accommodate outside developments. The desecration of the graves violates the mutual respect promised by the United States as they pledged a firm and permanent friendship between our peoples. The treaty also promised to remove the cause of complaint that upsets our peace. We therefore make it clear that the desecration of the graves of our ancestors causes great harm to our people and the United States and State of New York have an obligation to protect the general welfare of our people as promised in the legally binding treaties.

4.3 Past Burial Practices and Sites

In ancient days, the dead were handled differently than today. When people died, their bodies were wrapped in hides and placed on wooden scaffolds. Eventually, the flesh would decay and when the villages moved to a new location, the bones of the dead would be removed from the scaffolds, cleaned and re-wrapped. The small bundles of bones would then be buried in group graves called ossuaries. Some bodies were buried in single graves, with the body placed in a flexed position, as if sitting on the ground with the knees folded up and arms crossed over the knees.

In the late 1500s, fifty percent of Seneca graves contain artifacts showing the rituals of burial had become more complex. By the early 1600s, graves were oval or circular in shape. The grave was lined with furs, bark or woven grass mats. Bodies placed in a flexed position, with the head to the west side of the grave. The body was then covered with bark and field stones. By 1660, sixty percent of Seneca graves had brass trade items and fifty percent had iron trade items.

Wray and Schoff (1953) and Wray (1973) note that the custom of giving the dead offerings continued and probably used up their stock of trade goods as fast as it was acquired. After 1700, there appears to be a mixture of earlier and later bead types found on sites, which indicates that cemeteries were being looted at that time and the old bead types were coming into circulation. By 1687, the extended form of burial was slowly being adopted and the graves were becoming progressively shallower until by 1779, they were barely below plow depth.

Wooden caskets of pine boards with a few iron nails were beginning to be used by 1700 and the burials were made in rows instead of circular plots of scattered graves. As communities were breaking up and families began living in individual cabins, the burial plots became much smaller and more numerous with each family having their own plot behind their cabin. Burial offerings were often placed beside the body with food at the feet.

The goods included in burials during this time were mostly manufactured items with little of native make, replaced by crockery, pails, and iron tools of the European trader. The bodies would be dressed in their best clothes and would have been accompanied with food offerings in ceramic pots, tools and weapons, including flintlocks, necklaces of shell, silver ornaments on the clothing and specially prepared moccasins. All that was needed in this life was thought to be needed in the after life.

The bodies would be placed at the western end of the grave. The body of the deceased is now dressed in traditional style clothing, but no glass beads or metal is placed on the body. Glass and metal last a long time, even when buried, so they are not placed in the casket. Cloth, ribbon, feathers, or wood items are still placed on the body, as they will decay through time.

4.4 Haudenosaunee Sacred Objects

Since 1974, the Grand Council of the Haudenosaunee identified the following objects as being considered sacred and part of our national cultural patrimony. This is the underlying basis of our claims that have been made for the past twenty-eight years:

- 1) Wooden medicine masks, small and large
- 2) Corn husk masks, small and large
- 3) Snowsnakes, short and long
- 4) Condolence canes
- 5) Wampum
- 6) Peach stone game bowls and game dice
- 7) Wooden lacrosse sticks used in medicine games
- 8) Turtle rattles of all sizes
- 9) Ceremonial songs, speeches and prayers
- 10) Lacrosse sticks
- 11) Ceremonial clothing
- 12) Ceremonial dance instruments
- 13) Medicine objects and charms

In addition, a number of objects have been documented to have been included in graves of the Haudenosaunee, at one time or another.

- a) Ceramic pots
- b) Metal kettles
- c) Shell, stone or glass beads
- d) Wood spoons, ladles, or serving trays
- e) Wampum beads, ornaments or belts

- f) Metal tools, hatchets, guns, axes or knives
- g) Baskets
- h) Antler hair combs and carvings
- i) Manufactures hair combs
- j) Clay or manufactures pipes
- k) Silver and pewter ornaments

4.5 Haudenosaunee Policy on Medicine (False Face) Masks

The Grand Council of the Haudenosaunee issued, in 1995, this policy regarding all medicine masks of the Haudenosaunee.

Medicine Societies

Within the Haudenosaunee there are various medicine societies that have the sacred duty to maintain the use and strength of special medicines, both for individual and community welfare. A medicine society is comprised of Haudenosaunee who have partaken of the medicine and are thereby bound to the protection and perpetuation of the special medicines.

Such medicines are essential to the spiritual and emotional well-being of the Haudenosaunee communities. The medicine societies are a united group of individuals who must uphold and preserve the rituals that guard and protect the people, and the future generations.

Among these medicine societies are those that utilize the wooden masks and corn husk masks, which represent the shared power of the original medicine beings. Although there are variations of their images, all the masks have power and an intended purpose that is solely for the members of the respective medicine societies. Interference with the sacred duties of the societies and/or their masks is a violation of the freedom of the Haudenosaunee and does great harm to the welfare of the Haudenosaunee communities.

Status of Masks

All wooden and corn husk masks of the Haudenosaunee are sacred, regardless of size or age. By their very nature, masks are empowered the moment they are made.

The image of the mask is sacred and is only to be used for its intended purpose. Masks do not have to be put through any ceremony or have tobacco attached to them in order to become useful or powerful. Masks should not be made unless they are to be used by members of the medicine society, according to establish tradition.

Sales of Masks

No masks can be made for commercial purposes. Individuals who make masks for sale or sell masks to non-Indians violate the intended use of the masks, and such individuals must cease these activities as they do great harm to the Haudenosaunee. The commercialization of medicine masks is an exploitation of Haudenosaunee culture.

Authority Over Medicine Masks

Each Haudenosaunee [community] reservation has a medicine mask society that has authority over the use of masks for individual and community needs. Each society is charged with the protection of their sacred masks and the assurance of their proper use.

The Grand Council of Chiefs has authority over all medicine societies and shall appoint individual leaders or medicine societies as necessary. However, no individual can speak or make decisions for medicine societies or the displacement of medicine masks. No institution has the authority over medicine masks, as they are the sole responsibility of the medicine societies and the Grand Council of Chiefs.

Exhibition of Medicine Masks

The public exhibition of all medicine masks is forbidden. Medicine masks are not intended for everyone to see and such exhibition does not recognize the sacred duties and special functions of the masks.

The exhibition of masks does not serve to enlighten the public regarding the culture of the Haudenosaunee as such an exhibition violates the intended purpose of the mask and contributes to the desecration of the sacred image. In addition, information regarding medicine societies is not meant for general distribution.

The non-Indian public does not have the right to examine, interpret, or present the beliefs, functions, and duties of the secret medicine societies of the Haudenosaunee. The sovereign responsibility of the Haudenosaunee over their spiritual duties must be respected by the removal of all medicine masks from exhibition and from access to non-Indians.

Reproductions, castings, photographs, or illustrations of medicine masks should not be used in exhibitions, as the image of the medicine masks should not be used in these fashions. To subject the image of the medicine masks to ridicule or misrepresentation is a violation of the sacred functions of the masks.

The Council of Chiefs find that there is no proper way to explain, interpret, or present the significance of the medicine masks and therefore, ask that no attempt be made by museums to do so other than to explain the wishes of the Haudenosaunee on this matter.

Return of Medicine Masks

All Haudenosaunee medicine masks currently possessed by non-Indians, including Museums, Art Galleries, Historical Societies, Universities, Commercial Enterprises, Foreign Governments, and Individuals should be returned to the Grand Council of Chiefs of the Haudenosaunee, who will ensure their proper use and protection for the future generations.

There is no legal, moral, or ethical way in which a medicine mask can be obtained or possessed by a non-Indian individual or institution, as in order for a medicine mask to be removed from the society it would require the sanction of the Grand Council of Chiefs. This sanction has never been given. We ask all people to cooperate in the restoration of masks and other sacred objects to the proper caretakers among the Haudenosaunee. It is only through these actions that the traditional culture will remain strong and peace will be restored to our communities.

4.6 Haudenosaunee Standing Committee on Burial Rules and Regulations

Our Nations operate their repatriation programs under the auspices of the Haudenosaunee. The Grand Council, in accordance with the Great Law of Peace and based on Haudenosaunee protocols and cultural beliefs established the Haudenosaunee Standing Committee on Burial Rules and Regulations (HSCBRR). The HSCBRR has been tasked to work with the Nations of the Haudenosaunee to develop protocols and procedures for a coordinated approach related to burial remains.

The HSCBRR works in cooperation and collaboration with the other nations and communities on both the United States and Canadian side of the border. Through our own internal governance, we then decide where repatriated objects will be assigned. In terms of cultural patrimony, these objects are held on behalf of all of the Haudenosaunee, no matter where they reside. In reality, we view all of our aboriginal territory on both sides of the U.S. - Canada boundary line as one land and we view all of the Haudenosaunee as one people.

4.7 Procedures for Handling Discovery of Human Remains

	Known Burials	Unidentified Burials
When to contact?	Intentional excavation At the earliest time in the decision-making process.	Inadvertent Discovery Upon discovery
Which Nation to contact?	If find is within existing nation boundary, contact that nations' Cultural Resource representatives. If the find is within the traditional land use area (fifty mile radius from the current nation territory, contact the closest nations' Cultural Resource Representative. If the find is within the aboriginal territory of each nation, as shown on the attached map, contact the nation within that territory. For finds located within fifty miles on either side of the boundary lines shown on the map, contact the Cultural Resource Representatives of both nations.	
Who to contact?	Haudenosaunee Cultural Resource Representatives HSCBRR	Haudenosaunee Cultural Resource Representatives HSCBRR
How to contact?	Contact list is provided.	
Information required	Brief description of the find or potential find; site map and any information on the known cultural history of the area and summary of nearby archaeological findings	
Next steps	Nation will send a representative to review the site Non-disturbance of burials is preferred.	Company must hire a Native American on-site observer. No remains should be removed without proper Cultural protocols.
	If after proper consultation, the remains must be removed, we prefer to have them reburied as close to their original location as possible, provided the future sanctity of the grave can be assured. If no safe local burial ground can be offered, the Haudenosaunee will reclaim the remains for reburial at an undisclosed location. The local government/state agency/developer must pay all of the costs for such a reburial. All objects associated with the original burial must be reburied as well. All of the soil in the immediate area of the burial should also be placed in the new grave.	
Time Frame	30 to 45 days	As soon as possible.

Western New York National Cemetery Traffic Study

EXECUTIVE SUMMARY

This Traffic Study was conducted for the Western New York National Cemetery project located in the southeast corner of the intersection of Alleghany Road (Route 77) and Indian Falls Road in Pembroke, NY. The primary focus of this study was to:

- Assess the potential effects of the Cemetery's generated vehicular traffic, from daily/routine operations, on the adjacent roadway network.
- Provide guidance on access point locations, geometry and controls.
- Offer guidance on potential speed control measures for Alleghany Road in the vicinity of the project site.
- Provide a general documentation and understanding of how traffic associated with larger funeral processions and special events may be managed.

To establish traffic flow patterns and characteristics within the study area, seven days of vehicular traffic volumes, speeds and classification data was collected on Route 77 south of Indian Falls Road and on Indian Falls Road east of Route 77 during a typical week in April 2015. Additionally, intersection turning movement counts were conducted at Route 77/Indian Falls Road during intersection weekday morning and evening peak periods. The traffic count data confirmed field observations that motorists on Route 77 traveled at or above the posted speed limit of 55 MPH. Acceptable capacity and operations were observed at the intersection of Route 77/Indian Falls Road, which was substantiated by the intersection counts and existing conditions operations capacity analysis modeling.

It is anticipated that daily/routine operations trip generation rates will peak for the Cemetery when burial rates are estimated to peak in 2017. After 2017, burial rates are expected to remain steady then begin a slow decline over the next 20 years. Therefore, to provide a conservative assessment it was assumed that 2017 would represent the future conditions year in this study.

Based on discussions with NYSDOT, no specifically approved developments or roadway improvements/modifications were identified within the immediate area surrounding the project site. Therefore, to account for ambient traffic volume growth from undocumented sources, current counts conducted in March 2015 were compared to historic data to develop a general straight line growth rate of 1.5% per year for a total of 3.0% traffic volume growth, from 2015 to 2017. With the application of this traffic volume growth rate, minimal degradation in roadway or intersection operations was predicted.

Guidance on potential access point locations was facilitated by sight distance evaluations, which was used to identify sections (access zones) of Route 77 where public and service entrances should be located. Additionally, a sight distance evaluation was conducted for a specific spot-location on Route 77 at the southern end of the project site where a dirt access-way already exists for a billboard sign located along the Thruway.

The Cemetery's peak traffic generation correlates with burial services hours, which occur on a weekday between 9:00 AM and 3:00 PM. Based on traffic generation at other National Cemeteries, the Trip generation for this project assumed two corteges of 15 vehicles each may arrive at the Cemetery between 8:00 and 9:00 AM and

Western New York National Cemetery Traffic Study

two corteges of 15 vehicles each may leave the cemetery between 3:00 and 4:00 PM, since two committal services areas will be provided on site. Additionally, to provide a conservative assessment, it was assumed all seven employees arrive at 8:00 AM and leave at 4:00 PM along with an estimated number of visitors. This resulted in the following trip generation:

Morning Trip Generation 8:00-9:00 AM		
Trip Generator	Enter	Exit
Employee	7	0
Cortage	30	0
Visitor	10	5
Total	47	5
Afternoon Trip Generation 3:00-4:00 PM		
Trip Generator	Enter	Exit
Employee	0	7
Cortage	30	30
Visitor	10	20
Total	40	57

The estimated trip generation for the Cemetery was distributed onto the adjacent roadway network at the proposed public access point, and generally assumed that approximately 75% of the trips to the Cemetery would arrive from and return to points south of the site; with the remaining 25% of the trips to the Cemetery arriving from and returning to points north of the site. This distribution pattern assumed the Cemetery to be a destination type of land use and a majority of the traffic would arrive and leave the study area using the Thruway, I-90.

Operational analysis for proposed conditions, which included the Cemetery trips distributed onto the study area, was initially conducted assuming conventional types of roadway geometry for the public access point and the intersection of Route 77/Indian Falls Road. Both sets of analysis indicated that each intersection is predicted to operate acceptably, Level of Service results of 'c' or better. It is anticipated that the service access point for the Cemetery will accommodate less than 10 trips during either of the two analysis periods on a typical day without funerals. Given the very low traffic volumes and sporadic use of the service access, a detailed capacity analysis was not conducted; however, acceptable levels of operations are expected.

Under the conventional geometry scenario, no geometric improvements or changes to intersection controls were identified for the intersection of Route 77/ Indian Falls Road. For the public access point the operational capacity analysis assumed the Cemetery's public access would be stop sign controlled and have one lane entering and one lane exiting the site with no auxiliary turn lanes on Alleghany Road at the public access point.

Western New York National Cemetery Traffic Study

A qualitative review of traffic signal warrants determined neither intersection is an appropriate candidate for traffic signal control.

As indicated by the operational analysis, left and right turn lanes on Route 77 at the public access point are not required to accommodate the Cemetery's typical operations. However, a review of the left and right turn lane warrant indicates the addition of a right turn lane should be considered based on traffic volumes alone. Additionally, given the 55-60 MPH travel speeds on Route 77 coupled with the predominant driver types associated with the Cemetery (older, unfamiliar with the area, and potentially preoccupied by their visit), it is recommended left and right turn lanes be provided on Rout 77 at the public access point to reduce the potential for accidents. To identify a best-fit set of turn lane geometrics that will accommodate the Cemetery's functions and activities it is recommended as part of the detailed design process for the access points that follow on discussions with NYSDOT be conducted to properly vet and account for physical constraints, adjacent intersection encroachment and right-of-way impacts.

An alternative geometric option assessed for the public access point/Route 77 and Route 77/Indian Falls Road intersections was a one-lane roundabout, which is predicted to provide acceptable operations, Level of Service 'a' for both locations. It was included in this study for consideration as, primarily, a potential speed mitigation option as well as a feature that may assist with transforming the traveling characteristics of Route 77. Should the roundabout option deserve further consideration, it is recommended an engineering feasibility assessment be conducted to determine specific roundabout geometry and related right-of-way impacts.

The Hamlet of Indian Falls located north of the study area has a posted speed limit of 40 MPH on Route 77. As part of the field investigation efforts with NYSDOT, it was noted that an extension of the 40 PMH speed limit in a southerly direction on Route 77, past the project site, is not expected to have an appreciable impact on actual travel speeds and is therefore not recommended. However, additional design considerations and travel speed countermeasures to improve safety and reduced speeds on Route 77 could include:

- Roadway restriping
- Speed limit pavement legend
- Speed feedback signs
- Speed activated feedback warning signs

A more comprehensive list of speed countermeasures is included in the appendix of the report for reference and consideration with New York State Department of Transportation.

Finally, although the average funeral procession (which occurs on a weekday between 9:00 AM and 3:00 PM) is approximately 15 vehicles there are sporadic occasions when funeral procession lengths can be considerably longer. These are typically associated with the death of an active duty person or someone who has been killed-in-action. For such occurrences, the Cemetery Director and the Department of Veterans Affairs (VA) has specific procedures and protocols in place to accommodate the higher traffic loads, which include the involvement of the VA Police as well as coordination with local authorities. On Memorial and Veterans Days a majority of the parking for related holiday ceremonies may be located offsite in designated remote parking lots and shuttle service for visitors to and from the Cemetery and the parking lots will be provided. Additionally, the VA Police

Western New York National Cemetery Traffic Study

will be present at the Cemetery to control traffic. On other less busy holiday weekends when Cemetery traffic volumes may be elevated, but not to the point that may be experienced on Memorial or Veterans Day, coordination with local authorities will occur and an increased presence will be requested.

Western New York National Cemetery Traffic Study

I. Introduction

The U.S. Department of Veterans Affairs (VA) proposes to build the Western New York National Cemetery on a 130+ acre site located in Pembroke, NY. Phase I of a four to five phase build-out of the project site involves the development of 45 acres of the site, which will include construction of cemetery facilities necessary to maintain, operate and provide burials for approximately 10 years.

The purpose of this traffic assessment is to:

- Assess the effects of the Cemetery's generated vehicular traffic, from daily/routine operations, on the adjacent roadway network.
- Provide guidance on access point locations, geometry and controls.
- Offer guidance on potential speed control measures for Alleghany Road in the vicinity of the project site.
- Provide a general documentation and understanding of how traffic associated with larger funeral processions and special events may be managed.

The project site is located along the eastern side of Alleghany Road (Route 77) between Indian Falls Road (to the north) and NY I-90 (to the south) in the town of Pembroke, NY. The study area encompasses the segments of Route 77 and Indian Falls Road adjacent to the project site and the intersection of Route 77/Indian Falls Road. The land uses bordering the project site are active agricultural land with undeveloped woodland/wetland area and a few residential properties. **Figure 1** provides a project location map. **Figure 2** identifies the proposed project area.

The following sections of the report document analysis procedures, technical assumptions, and vehicular operations, conclusions and recommendations.

II. Data Collection and Field Observations

Intersection turning movement counts (TMC) were collected for the intersection of Route 77/Indian Falls Road on Thursday April 16, 2015. The turning movement count data's primary purpose was to form the basis for the morning study period and afternoon study period operational assessments. Existing conditions volume data for the intersection of Route 77/Indian Falls Road is provided on **Figures 3 and 4** in the Existing Conditions section of this report. The actual intersection turning movement count data is provided in the **Appendix** of this study.

To confirm roadway character, motorist behaviors and to validate the TMC data, Automated Traffic Recorders (ATR's) collected continuous traffic volume, speed and classification data on Route 77 south of Indian Falls Road and on Indian Falls Road east of Route 77, from April 15, 2015 to April 22, 2015. **Table 1** below summarizes the weekday ADT, 85% speed and heavy vehicle percentage data collected by the ATRs. The ATR count data is provided in the **Appendix** of this study.

Table 1

ATR Data

Route	Route 77: South of Indian Falls Road	Indian Falls Road: East of Route 77
Weekday ADT	6,535	931
85% Speed	59 MPH	45 MPH
Heavy Vehicle %	9%	7%

Additionally, to establish potential access point locations, sight distance evaluations were conducted for Route 77 and Indian Falls Road within the study area on April 7, 2015 and April 16, 2015. The criteria utilized for the sight distance evaluation, the evaluation process and findings are explained in the Future Conditions section of this study.

Field observations noted good levels of operation at the study intersection as well as for Route 77 and Indian Falls roadway segments. Motorists appeared to be traveling at or above the posted 55 MPH speed limit on Route 77. On both days of observation police were present on Route 77 monitoring traffic and stopping vehicles.

Western New York National Cemetery Traffic Study

III. Existing Conditions

This section of the study describes the current transportation network included in this assessment and documents the transportation network, capacity analysis methodology and current network operations.

A. Description of Transportation Network

Route 77– Route 77, also known as Alleghany Road, within the study limits, is a north-south travel route with one travel lane in each direction. The travel lanes are approximately 12’ wide. Route 77 is classified by NYSDOT as a rural minor arterial roadway. The posted speed limit is 55 MPH within the study limits. ATR counts documented a weekday ADT of 6,535 for Route 77.

Route 77
Southbound

Indian Falls Road – Indian Falls Road, within the study area, is an east-west travel route with one travel lane in each direction. The travel lanes are approximately 11’ wide. Indian Falls Road to the east of Alleghany Road is classified by NYSDOT as a rural minor collector roadway and to the west of Route 77 is classified as a local road. The posted speed limit is 55 MPH within the study limits. ATR counts documented a weekday ADT of 931 for Indian Falls Road.

Indian Falls Road
Westbound

Route 77 & Indian Falls Road Intersection – The Route 77 and Indian Falls Road intersection is a four-legged intersection with one lane entering from each approach. It is stop sign controlled on Indian Falls Road’s eastbound and westbound approaches.

Route 77/Indian Falls Road Intersection
Westbound Approach

Western New York National Cemetery Traffic Study

NYS Interstate 90 (I-90) Exit 48-Pembroke - I-90 is an east-west toll road with two lanes in each direction that stretches across Upstate New York. The I-90 Exit 48-Pembroke access is located off Route 77 approximately 1/3 mile south of the southern Site boundary. Although it is not included in the study area, it's proximity to the project site is notable, as a significant percentage of traffic to and from the National Cemetery is expected to take advantage and use of I-90.

B. Capacity Analysis Methodology

Intersection capacity analysis was conducted using Synchro, Version 8.0 software¹. The program is based on methods presented in the 2010 Highway Capacity Manual² that describes the levels of operation of intersections controlled by signals and regulated by stop signs.

Using an analytical approach, a Level of Service is determined for traffic travelling through an intersection. The Level of Service is defined or quantified in terms of average delay experienced by motorists, which is equated to the letters 'a' to 'f' for stop sign controlled intersections. The following provides delay descriptions for each level of service:

Stop Sign Controlled Intersections

- a 10 seconds or less
- b 10.1 to 15 seconds
- c 15.1 to 25 seconds
- d 25.2 to 35 seconds
- e 35.1 to 50 seconds
- f Greater than 50 seconds

From experience, a Level of Service 'd' for a stop controlled intersection is generally considered to be the threshold of acceptable operations in a rural setting.

C. Establishment of Study Time Period and Operational Analysis

The Western New York National Cemetery operations and functions will be in accordance with the operations for all other National Cemeteries and will closely replicate the operations of Indiantown Gap National Cemetery in Annville, PA. Based on the operations at Indiantown Gap and through discussions with the project team, weekday morning and afternoon study periods were determined for analysis purposes. Specific operational details include:

Western New York National Cemetery Traffic Study

- **Employees** arrive between 7:30-8:00 AM, begin work promptly at 8:00 AM and conclude the work day by 4:30 PM.
- **Funeral services** occur between 9:00 AM and 3:00 PM, primarily Tuesday thru Thursday, taking place promptly on the hour/half hour as scheduled throughout the day.
- **Funeral corteges** begin to arrive between 8:00-9:00 AM for 9:00 AM services. In the afternoon the last services end at 3:00 PM with attendee departures after 3:00PM.
- **Visitors** may pay their respects and tour the the Cemetery from dawn until dusk.

Based on the Cemetery operations, a morning study period of 8:00-9:00 AM was a chosen for operational capacity analysis to capture the peak traffic generating morning period of the cemetery. Similarly, an afternoon study period of 3:00-4:00 PM was chosen for operational capacity analysis to capture the peak afternoon traffic generating period of the Cemetery.

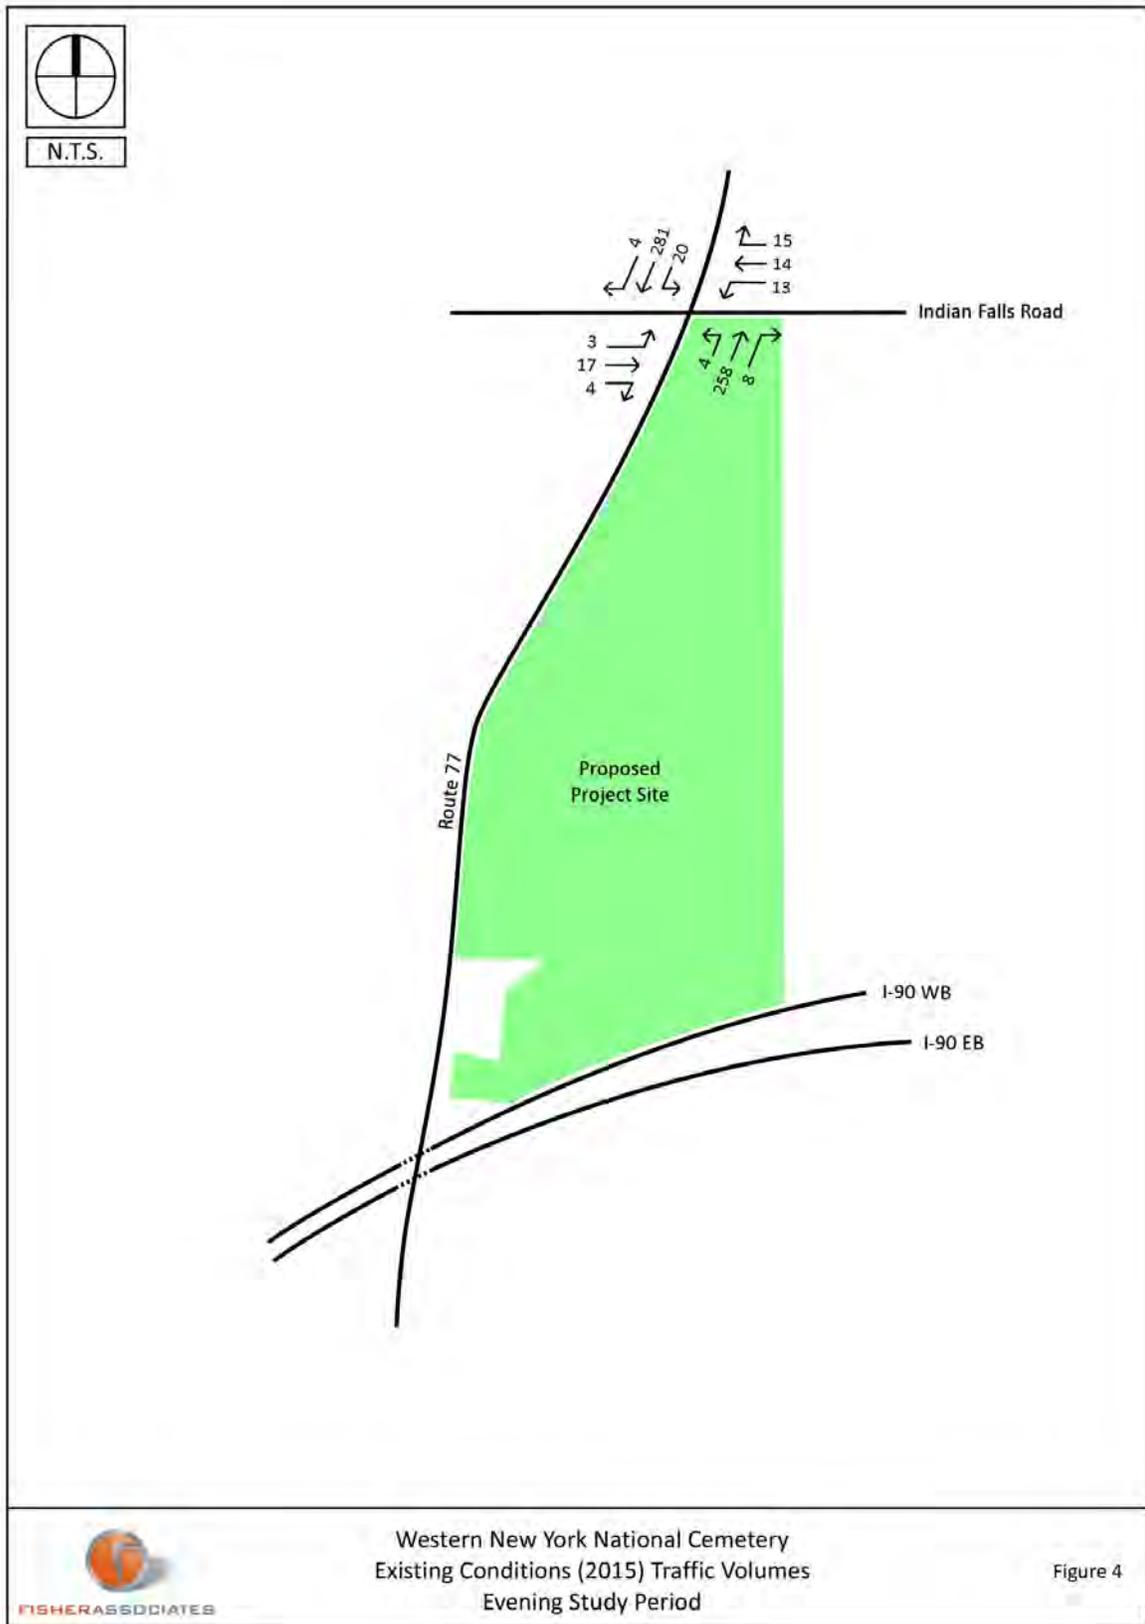

Existing conditions traffic volume data for the morning and afternoon study periods were obtained from turning movement counts collected April 16, 2015 for the intersection of Route 77/Indian Falls Road and depicted on **Figure 3** and **Figure 4**, respectively. Existing conditions capacity analysis indicate a Level of Service (LOS) 'c' or better, for all movements within the study intersection, for both time periods, which confirmed field observations.

Capacity analysis summary reports for Existing Conditions are provided in the **Appendix** of this report.

Western New York National Cemetery Traffic Study

Western New York National Cemetery Traffic Study

Western New York National Cemetery Traffic Study

IV. Background Conditions

This section of the study establishes the base conditions upon which the Cemetery generated traffic will be added to assess proposed (future) conditions and operations.

A. Background Growth

It is anticipated that the National Cemetery will be operational in 2016. However, projected internment rate data provided by the VA identifies 2017 as the year that projected internment rates are expected to be at their highest level of 421. Additionally, the data shows that internment rates are expected to consistently decline in the subsequent 20 years. Therefore, to provide a conservative assessment, background conditions were established for the year 2017.

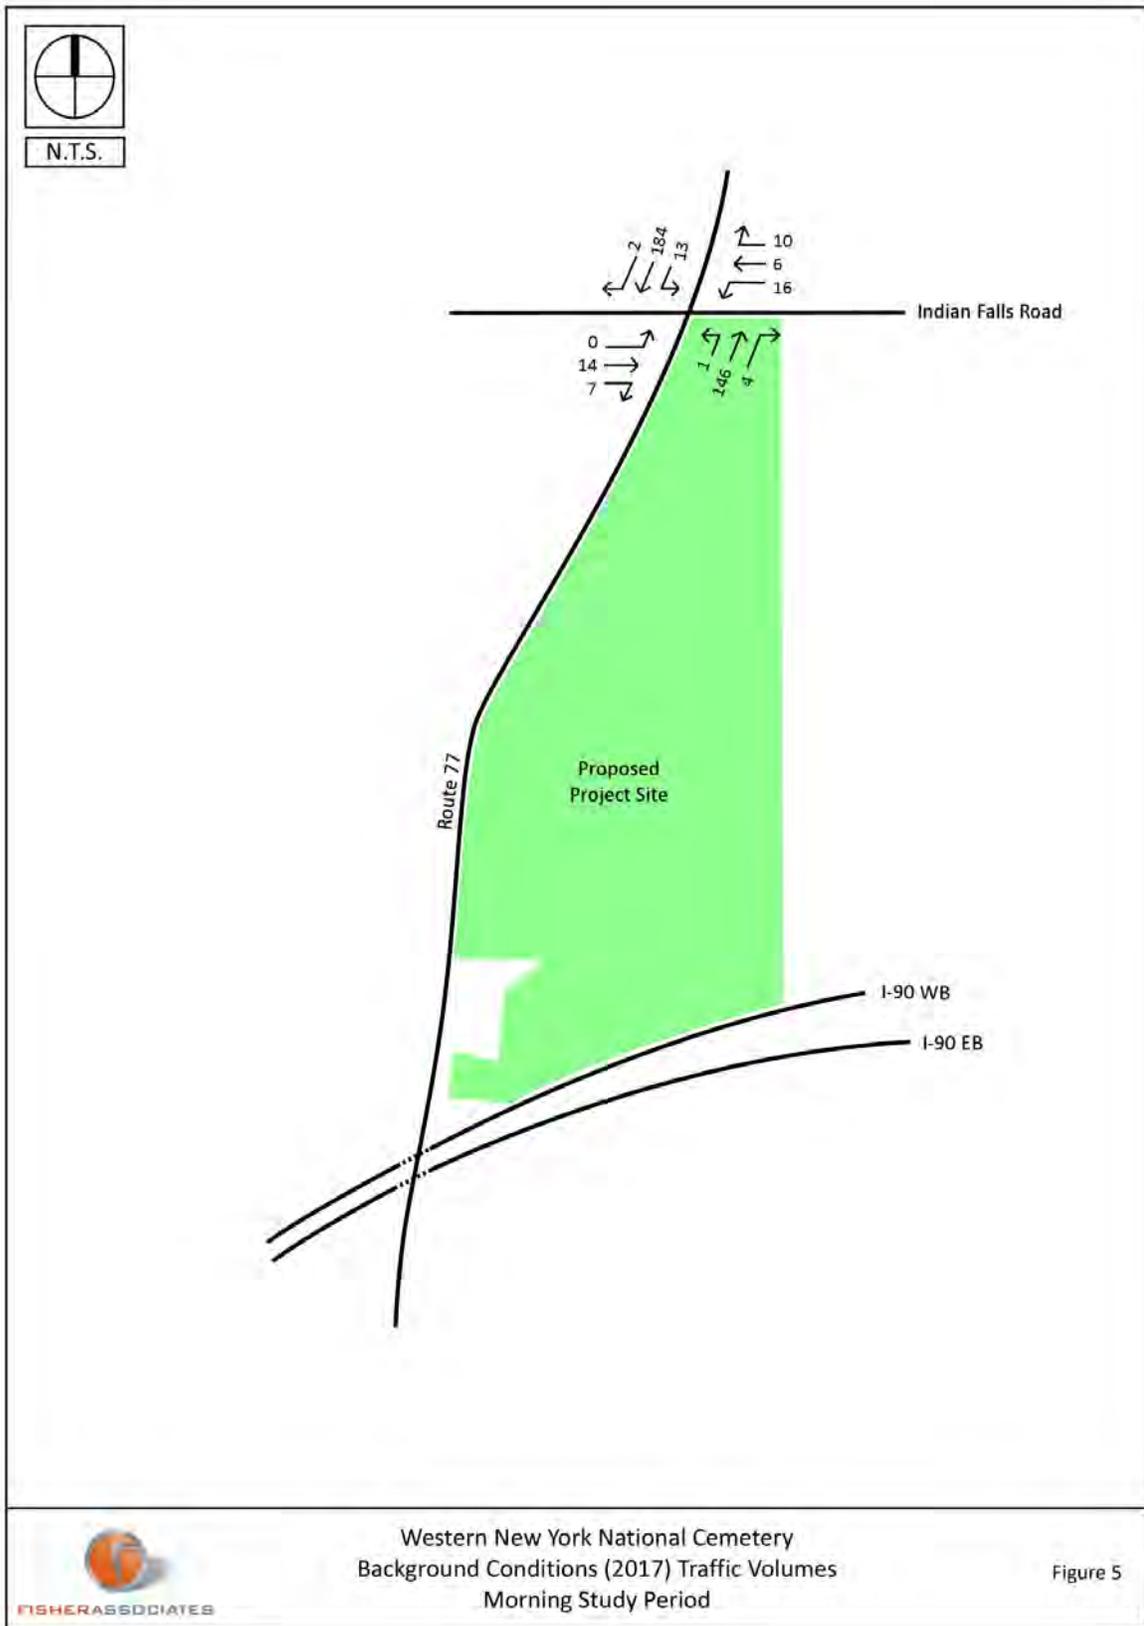

Based on discussions with NYSDOT, no specifically approved developments or roadway improvements/modifications were identified within the immediate area surrounding the project site. Hence, current Route 77 ADT from April 2015 ATR count data was compared against historic ADT data to develop a straight-line nominal growth rate of 1.5% per year to account for ambient traffic volume growth. As a result, a total of 3% traffic volume growth for 2015 to 2017 was applied to the 2015 Existing Conditions traffic volumes to establish 2017 Background Conditions traffic volumes.

Figure 5 and Figure 6 depict morning and afternoon Background Conditions traffic volumes respectively.

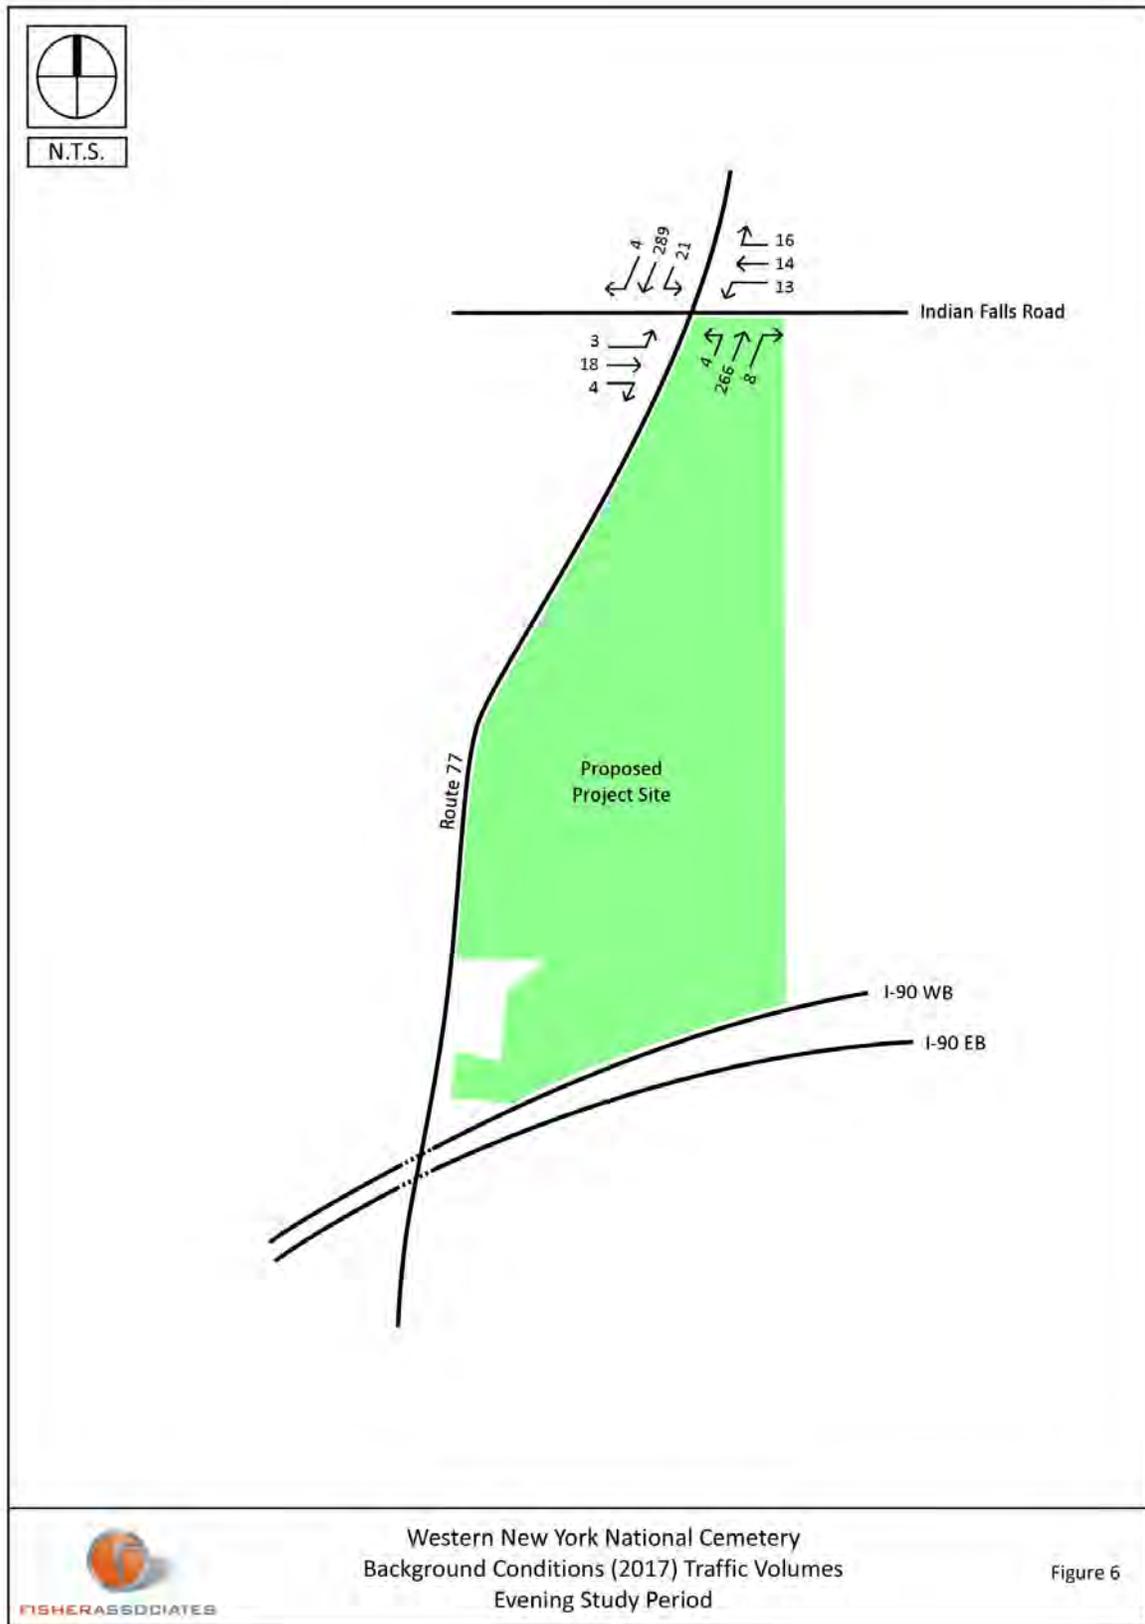

B. Background Operations & Capacity Analysis

The background conditions capacity analysis indicates a Level of Service of 'c' or better for all movements within the study intersection, for both time periods. These results are indicative of a roadway network that is projected to operate without significant capacity constraints well into the immediate future. Capacity analysis summary reports for background conditions are provided in the **Appendix** of this report.

Western New York National Cemetery Traffic Study

Western New York National Cemetery Traffic Study

Western New York National Cemetery Traffic Study

V. Future Conditions

Under future conditions the study will provide guidance on:

- Access point locations.
- Access point geometry and control recommendations
- Potential speed control measures for Route 77 in the vicinity of the project site.

Additionally, a general understanding will be provided on how traffic associated with larger funeral processions and special events may be managed by the VA and in cooperation with the local jurisdictions and authorities.

A. Access Point Sight Distance Evaluation

To identify an appropriate zone in which to locate public and service access points, a sight distance evaluation was conducted along the project's property fronting Route 77. Criterion for conducting this evaluation was obtained from ASSHTO's A Policy on Geometric Design of Highways and Streets³, FHWA's Access Management in the Vicinity of Intersections⁴ and NYSDOT's Highway Design Manual⁵.

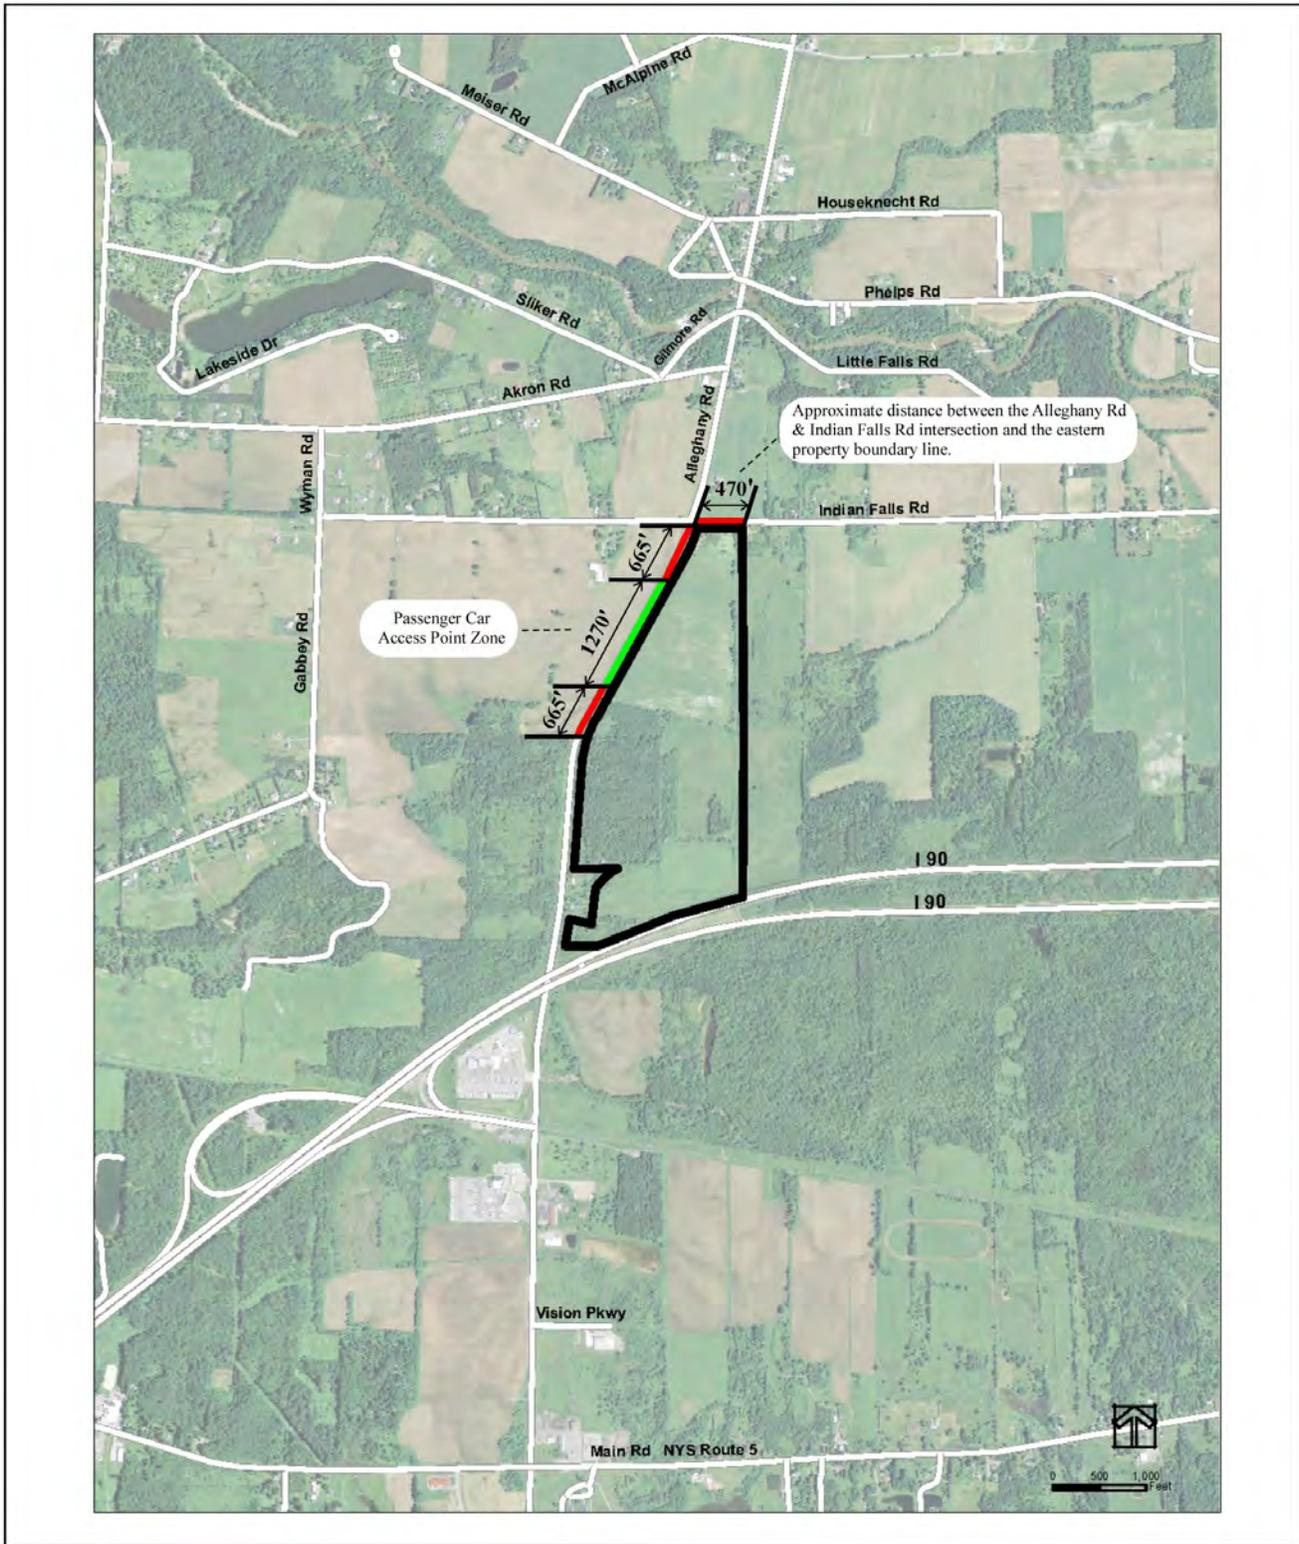

Additionally, based on field observations and project team discussions, it was assumed that:

- Access would be limited to Route 77 at the northern end of the project site
- Access from the project onto Route 77 would not occur within the wooded/wetland area.
- The horizontal curve on Alleghany Road was the sight constraint to the south.
- The intersection of Route 77 and Indian Falls Road was the sight (crest of vertical curve) constraint to the north.
- The estimated functional area of the Route 77 and Indian Falls Road intersection was used to determine the intersection separation constraint.
- The primary vehicle type using the public access point would be a passenger vehicle (car, SUV or light truck).
- The primary vehicle type using the service access point would be a utility/maintenance vehicle (heavy duty truck, box truck or single unit truck).

Based on this evaluation, a public access zone of approximately 1,270 feet and a service access zone of approximately 920 feet were identified along Route 77 at the northern end of the project site. **See Figures 7 and 8.**

Additionally, sight distance measurements for a specific service access point were documented at the southern end of the project site. This specific service access point is located in the vicinity of a dirt road/access-way for a billboard sign located along the Thruway. At this specific location, the observed intersection sight distance was greater than the desired intersection and stopping sight distance that was established for determining the service access point zone at the northern end of the project site. **See Figure 9.** A detailed access point sight distance evaluation analysis and support material is contained in the **Appendix** of this report.

Western New York National Cemetery Traffic Study

B. Trip Generation

Site specific trip data for this project was provided by the VA based on their extensive experience with development of similar national cemetery projects and historical knowledge of national cemetery operations.

The national cemetery is expected to have seven (7) employees that are expected to arrive by 8:00 AM and depart by 4:30 PM. On a typical day 3-4 (maximum 6) funeral services will be provided that will generally occur between the hours of 9:00 AM and 3:00 PM, Tuesday thru Thursday. Based on the understanding of existing operations at Indiantown Gap National Cemetery and program information provided by the VA, the average funeral cortege consists of 15 vehicles with the potential of 2 funeral services occurring at the same time. The cemetery site will be designed with an onsite vehicle staging area to accommodate 2 average corteges (30 vehicles). It is anticipated standard-practice escort services will provide sufficient traffic control assistance for these types of daily events.

Trip generation estimates are conservatively based on the assumption that 7 employees and 2 overlapping committal services with corteges of 15 vehicles each will all arrive between 8:00 – 9:00 AM and depart between 3:00-4:00 PM.

Approximately 150 visitors, 2 persons per vehicle, are expected at the cemetery on an average day amounting to 75 vehicle trips. It is assumed that up to 20% (15) of visitors may arrive and depart during the morning study period and up to 40% (30) of visitors may arrive and depart during the afternoon study period.

Table 2 below provides morning and afternoon study period trip generation summary based on the above estimates and assumptions.

Western New York National Cemetery Traffic Study

Table 2
Summary of Trip Generation

Morning Trip Generation 8:00-9:00 AM		
Trip Generator	Enter	Exit
Employee	7	0
Cortage	30	0
Visitor	10	5
Total	47	5
Afternoon Trip Generation 3:00-4:00 PM		
Trip Generator	Enter	Exit
Employee	0	7
Cortage	30	30
Visitor	10	20
Total	40	57

C. Trip Distribution

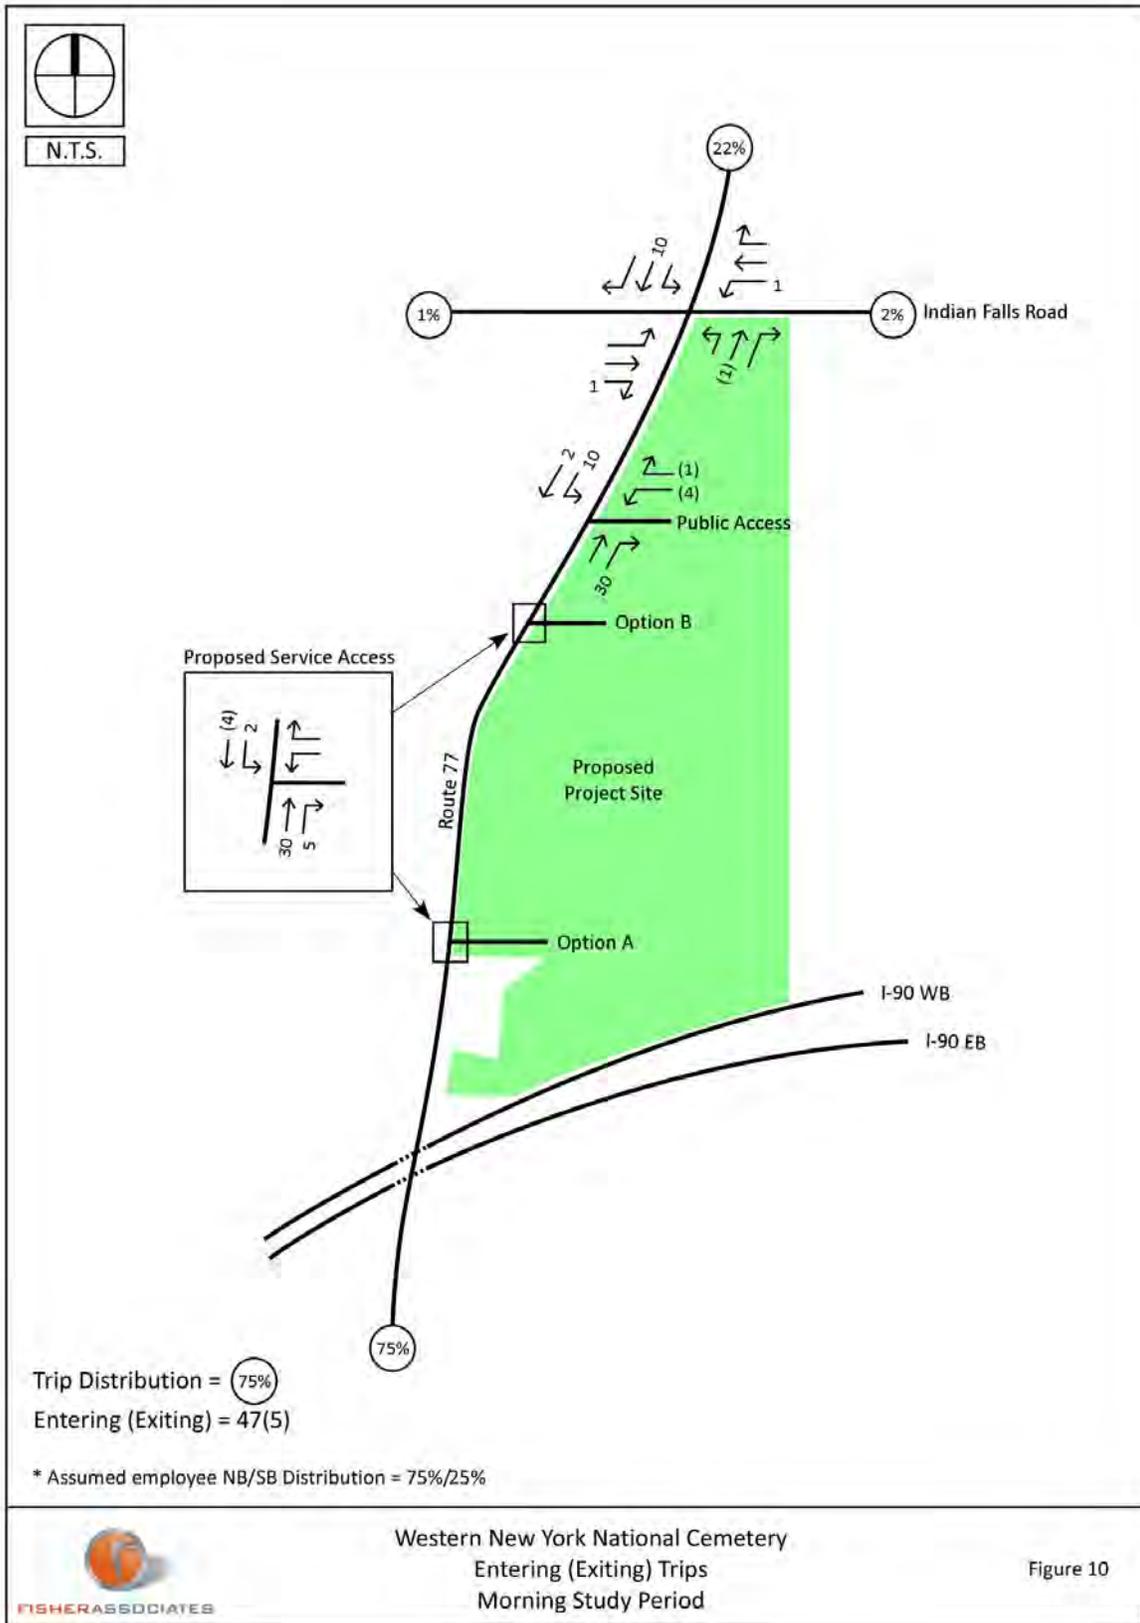

Approximately 1/3rd of mile south of Cemetery site is NYS I-90 Exit 48-Pembroke access is located on Route 77. NYS I-90 is an east-west toll road that stretches across Upstate New York and is expected it will serve a significant percentage of the traffic destined for the Cemetery.

Hence, it is was estimated that 75% of Cemetery trips traveling from and returning to south of the site are expected to travel I-90 Exit-48, and 25% of Cemetery trips travelling from and returning to north of the site are expected to travel through the intersection of Route 77/Indian Falls Road.

Cemetery trips arriving from and returning to north of the site via the Route 77/Indian Falls Road intersection were distributed based on turning movement count volume data collected April 16, 2015. Trips entering and exiting the project site were distributed based on their trip generator categorization (employee, visitor, and cortege) to determine the appropriate trip across the access point distributions.

Morning and afternoon trip distributions in the form of entering and exiting percentages along with actual new trips are provided in **Figure 10** and **Figure 11**, respectively.

Western New York National Cemetery Traffic Study

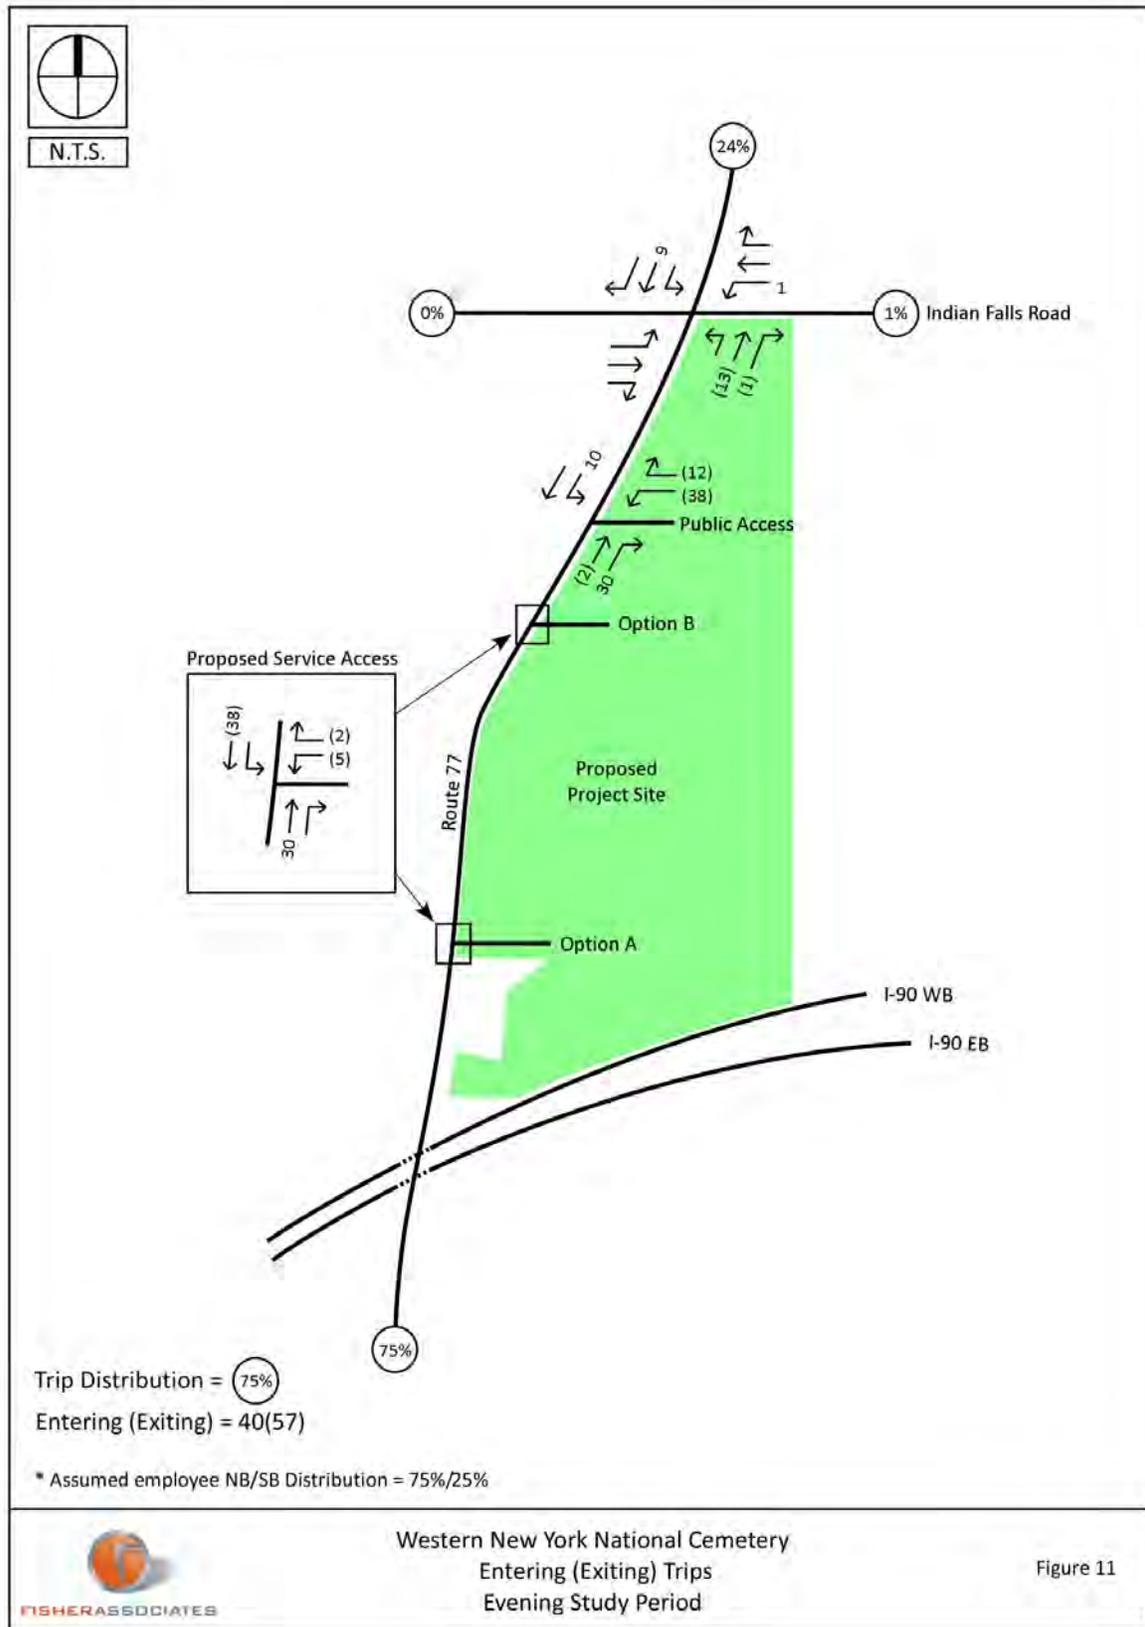

Trip Distribution = (75%)
 Entering (Exiting) = 47(5)

* Assumed employee NB/SB Distribution = 75%/25%

Western New York National Cemetery Traffic Study

Western New York National Cemetery Traffic Study

D. Cemetery Related Operations & Capacity Analysis

To conduct operational capacity analysis for the intersection of Route 77/Indian Falls Road and the Route 77/Public Access point, the Cemetery's trip generation was applied to background conditions traffic volumes. Future Conditions morning and afternoon traffic volumes are provided in **Figures 12 and 13** respectively.

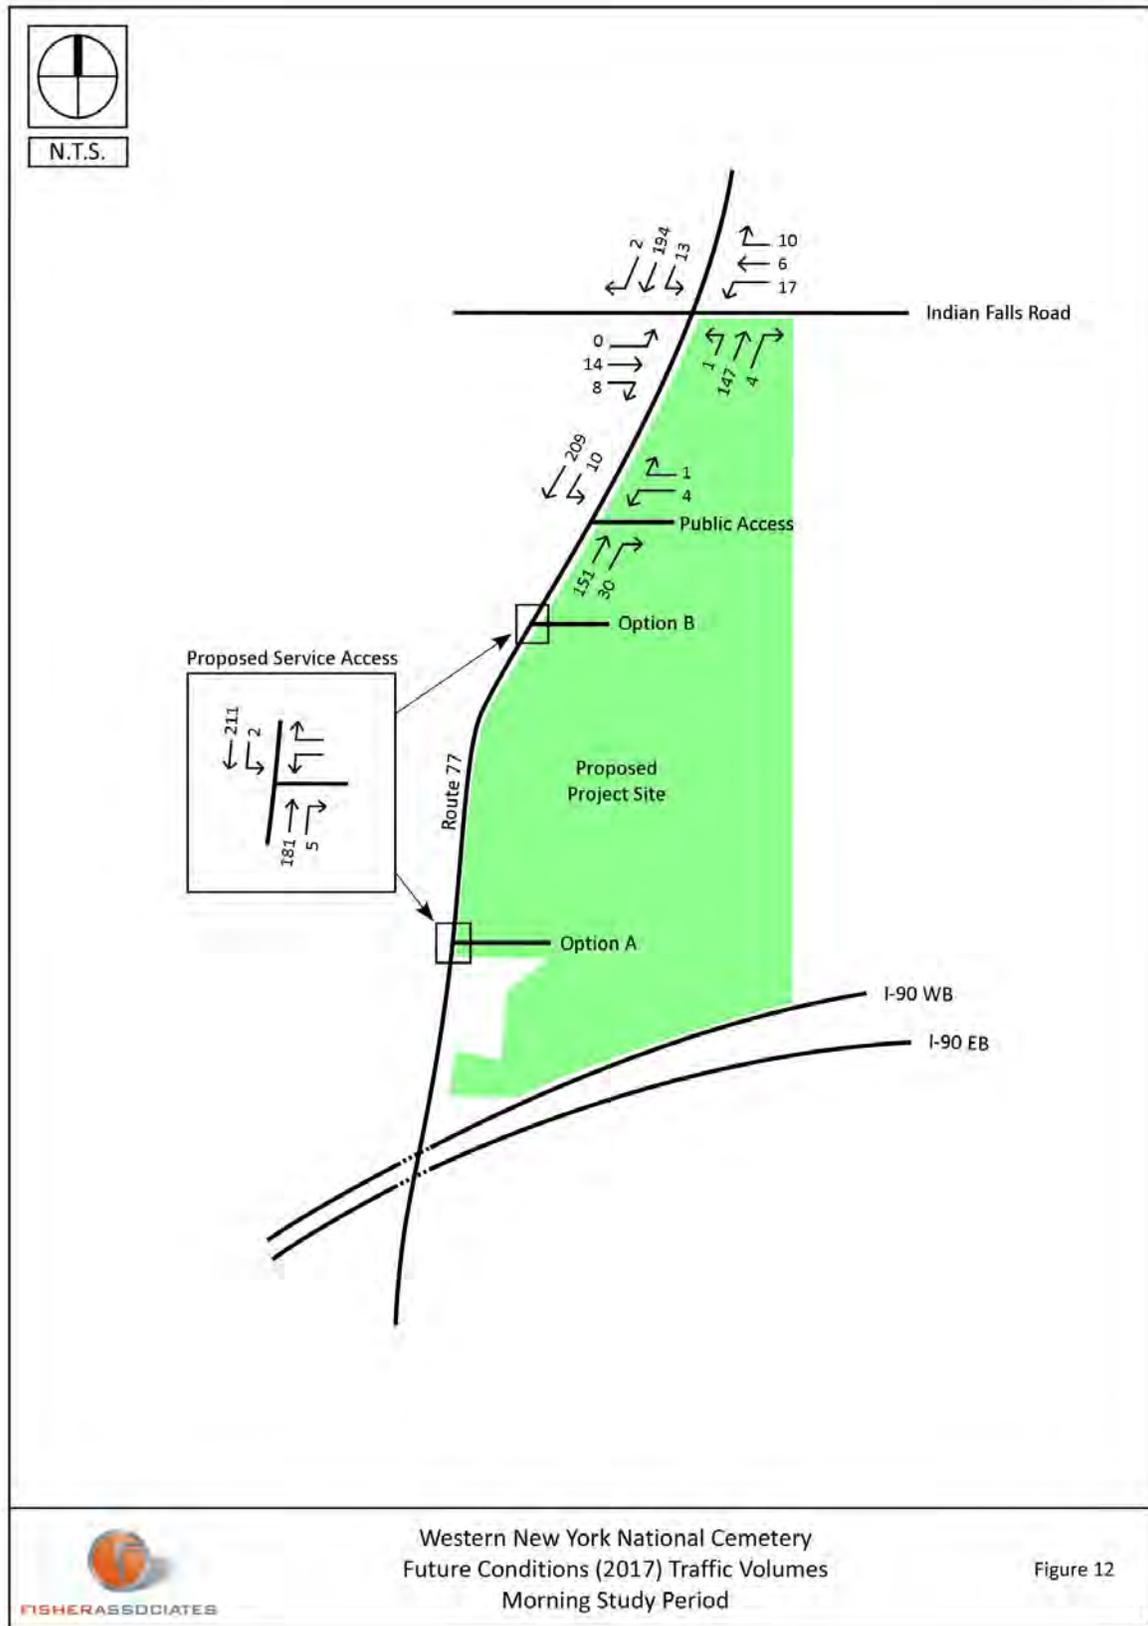

Initially, based on the projected future traffic volumes, the operational capacity analysis assumed the Cemetery's public access would be stop controlled on the Cemetery approach with one lane exiting and one lane entering the property with no left or right turn lanes on Route 77.

Although two locations were identified on Route 77 for a possible service access point, *Option A* - south of the horizontal curve on Route 77, and *Option B* - north of the horizontal curve on Route 77 within the public access zone, a preferred service access location remained under evaluation at the time of this study. *Option A* and *Option B* are both graphically depicted in the traffic volume figures along with the service access trips. It is anticipated that the service access will serve less than 10 vehicles during either of the two study periods on a typical day. Therefore, due to these minimal traffic volumes, the service access point is expected to operate acceptably.

Results of the capacity analysis indicate that all movements within the study intersections are expected to operate at a Level of Service 'c' or better during both analysis hours. Capacity analysis summary reports for proposed conditions are provided in the appendix of this report.

The 2009 edition of the Manual of Uniform Traffic Control Devices (MUTCD) Chapter 4C⁶ provides nine signal warrants to evaluate the need for a traffic signal at an intersection. A qualitative review of signal warrants indicated signal control is not applicable at the Route 77/Indian Falls Road intersection or the Route 77/Public Access intersection, which is further supported by the acceptable level of service 'c' or better for side street stop control.

 Future Conditions (2017) Traffic Volumes
 Morning Study Period

Figure 12

Western New York National Cemetery Traffic Study

Western New York National Cemetery Traffic Study

E. Turn Lane Evaluation – Safety Considerations

As indicated by the operational analysis, left and right turn lanes at the public access point on Route 77 are not necessary to achieve acceptable Levels of Service for the proposed traffic demands related to the more routine/typical weekday Cemetery activities associated with visitors, burial corteges and staffing. A review of the left and right turn lane warrants, contained in the appendix, does indicate the addition of a right turn lane should be considered based on traffic volumes alone. Additionally, given the higher travel speeds on Route 77 coupled with the predominant driver types connected with the Cemetery (older, unfamiliar with the area, and potentially preoccupied by their visit), it is recommended left and right turn lanes be provided on Route 77 at the public access point to reduce the potential for accidents. Given the low traffic volumes at the service entrance and assumed access point operations, it is anticipated left and/or right turn lanes are not warranted.

For the public access point, a review of ASSHTO's Policy on Geometric Design of Highway's and Streets³ as well as Chapter Five from the NYSDOT Highway Design Manual⁵ noted the desirable full deceleration length is 605 feet for a roadway travel speed of 60 MPH. If it is assumed that traffic entering the turn lane has already begun its deceleration by 10 MPH, then the desirable full deceleration length is 425 feet for a roadway travel speed of 50 MPH. These full deceleration lengths are in addition to vehicle storage lengths based on potential vehicle queuing. Since the operational capacity analysis for the public access point did not predict the need for turn lanes to satisfy a capacity constraint, a nominal vehicle queue length of two passenger cars was assumed. This queue length was then correlated to a lane storage length of approximately 75' at the public access point.

These turn lane geometries are provided for guidance purposes. It is recommended, as part of the detailed design process for the access points, that follow up discussions with NYSDOT occur to identify a best-fit set of turn lane geometrics to account for the physical constraints of the roadway network and desirable conditions to accommodate the Cemetery's functions and activities. Capacity analysis summary reports for turn lane evaluation are provided in the **Appendix** of this report.

F. Roundabout Evaluation

Capacity analysis was conducted for roundabouts at the Public access point and Route 77/Indian Falls intersection. Although roundabouts are not necessary to achieve acceptable Levels of Service for the proposed traffic demands related to the more routine/typical weekday Cemetery activities, it is included in this study as an option that may mitigate travel speed and may assist with changing the travelling characteristics of Route 77 within the vicinity of the Cemetery.

Results of the capacity analysis conducted for roundabout evaluation indicate that the study intersections are expected to operate at a Level of Service 'a' during both analysis hours. Capacity analysis summary reports for roundabout evaluation are provided in the **Appendix** of this report.

Should the roundabout option be pursued further, it is recommended an engineering feasibility assessment be conducted to determine specific roundabout geometry and related right-of-way impacts.

Western New York National Cemetery Traffic Study

G. Rural Road Travel Speed Countermeasures

The Hamlet of Indian Falls located north of the study area has a posted speed limit of 40 MPH on Route 77. As part of the field investigation efforts with NYSDOT, it was noted that an extension of the 40 MPH speed limit in a southerly direction on Route 77, past the project site, is not expected to have an appreciable impact on actual travel speeds and is therefore not recommended. However, additional design considerations and travel speed countermeasures to improve safety and reduced speeds on Route 77 could include:

- Roadway restriping
- Speed limit pavement legend
- Speed feedback signs
- Speed activated feedback warning signs

A more comprehensive list of speed countermeasures provided by the Federal Highway Administration (FHWA) is included in the **Appendix** of the report for reference and consideration with New York State Department of Transportation.

H. Cemetery Events and Special Occasions

Capacity analysis results indicate that the Cemetery operations throughout a typical day will have minimal operational impact on the surrounding roadway network during the study hours. However, there are occasions when funeral processions may be larger than the average 15-vehicle cortege. These typically occur when a funeral service is for an active duty service member who was killed-in-action. To accommodate the expected traffic volumes, the Cemetery Director and the VA have specific procedures and protocols in place, which include coordination with VA police and local municipalities to provide appropriate traffic controls and safety as the procession travels the roadways.

For Memorial Day and Veteran's Day ceremonies the Cemetery can experience an increase visitor demand and attendance. It is acknowledged for these events coordinated traffic control may be necessary and the will work with local authorities on appropriate temporary measures to facilitate these events. Also, because parking within the national cemetery is limited, on such occasions, off-site parking may be arranged with a shuttle service. During busy holidays like Christmas week and Mother's Day weekend when increased visitor volumes occur throughout the day, unlike a scheduled event when visitors arrive at the same time, cemetery staff may coordinate with local authorities to request an increased police presence in the area.

Western New York National Cemetery Traffic Study

VI. Conclusions

In Summary, the following transportation related recommendations and considerations are provided to accommodate the traffic generation for the Western New York National Cemetery:

- The public access point should be located within the 1270 feet public access zone.
- The service access point should be located either within 920 feet service access zone or located in the vicinity of a dirt road/access-way for a billboard sign located along the Thruway.
- No geometric improvement or modifications to intersection controls were identified for the intersection of Route 77/Indian Falls Road.
- Acceptable levels of service are predicted for the public access point with the Cemetery approach being stop sign controlled with one lane exiting and one lane entering.
- It is recommended left and right turn lanes be provided at the public access point to reduce the potential for accidents. As part of the detailed design process for the access points, follow up discussions with NYSDOT should occur to identify a best-fit set of turn lane geometrics to account for the physical constraints of the roadway network and desirable conditions to accommodate the Cemetery's functions and activities.
- Application of a roundabout at either the public access point or the intersection of Route 77/Indian Falls Road may mitigate travel speed and may assist with changing the travelling characteristics of Route 77 within the vicinity of the Cemetery. Further consideration of this option warrants an engineering feasibility assessment be conducted to determine specific roundabout geometry and related right-of-way impacts.
- Other treatments may be considered in an effort to control travel speeds within the study area, For example, but not limited to:
 - Roadway restriping
 - Speed limit pavement legend
 - Speed feedback signs
 - Advance warning signs

D. SIGHT DISTANCE EVALUATIONS

FISHERASSOCIATES

MEMO

135 Calkins Road • Rochester, NY 14623 • Phone: 585-334-1310 • Fax: 585-334-1361 • www.fisherassoc.com

To:	Darrell Meehl, RLA, ASLA	Date:	April 10, 2015
Company:	The LA Group	Phone #:	518-587-8100
Address:	40 Long Alley Saratoga Springs, NY 12866		
From:	Keith Mortimer	CC:	file
Subject:	WNY National Cemetery - Main (Public) Access Point - Sight Distance Evaluation (Passenger Car)		

Comments:

We have conducted a sight distance investigation at the proposed Western NY National Cemetery site and have identified an access point zone along the east side of Route 77 in which a main (public) access points to the site can be located that meets established intersection spacing and sight distance criteria for a passenger car. The investigation also determined that there are no recommended locations for access points on Indian Falls Road.

The findings of this investigation are considered close approximations based on direct field observation measurements. Measurements were not obtained through the use of a survey crew and survey instruments.

The attached figure summarizes the access point zone. The following portions of this memo provide an overview of the process used to determine the access point zone along the east side of Route 77.

Sight Distance & Intersection Spacing Criteria

Research was conducted to determine the adjacent roadway network characteristics and sight distance requirements prior to the field investigation using the following sources:

- Roadway Speeds: Speed data from NYSDOT's Traffic Data Viewer
- Minimum Stopping and Intersection Sight Distances:
 - AASHTO – A Policy on Geometric Design of Highways and Streets, 2011
 - NYSDOT – Highway Design Manual Appendix 5C, Intersection Sight Distance Charts
- Functional Area of an Intersection (minimum distance from other intersections):
 - FHWA - Access Management in the Vicinity of Intersections
 - AASHTO – A Policy on Geometric Design of Highways and Streets

From these sources the following criteria was identified for use in the determination of the access point zone for a passenger car:

- Assumed grades of -3% to +3%
- 85th Percentile Speed (Route 77*): ~60 mph
- Stopping Sight Distance: 570 feet
- Intersection Sight Distance:
 - Left turn from driveway: 665 feet - both directions
 - Right turn from driveway: 575 feet – one direction
- Minimum Distance from an Intersection: 605 feet

*Speed data for Indian Falls Road was unavailable

Access Point Zone Determination

An on-site sight distance investigation was conducted on Tuesday April 7th, 2015 to identify a zone in which access points meet the above criteria. The following procedure was used in the field to identify the zone:

1. Sight constraints included horizontal and vertical curves, and existing intersections.
2. At these constraint locations distances from the above criteria were measured.
3. Sight distances were verified at the measured distances utilizing methodology from AASHTO:
 - a. Stopping Sight Distance:
 - i. Height of Drivers Eye: 3.5 feet
 - ii. Height of Object: 2.0 feet
 - b. Intersection Sight Distance:
 - i. Height of Drivers Eye: 3.5 feet
 - ii. Height of Object: 2.0 feet
 - iii. Distance from Curb: 10.0 feet

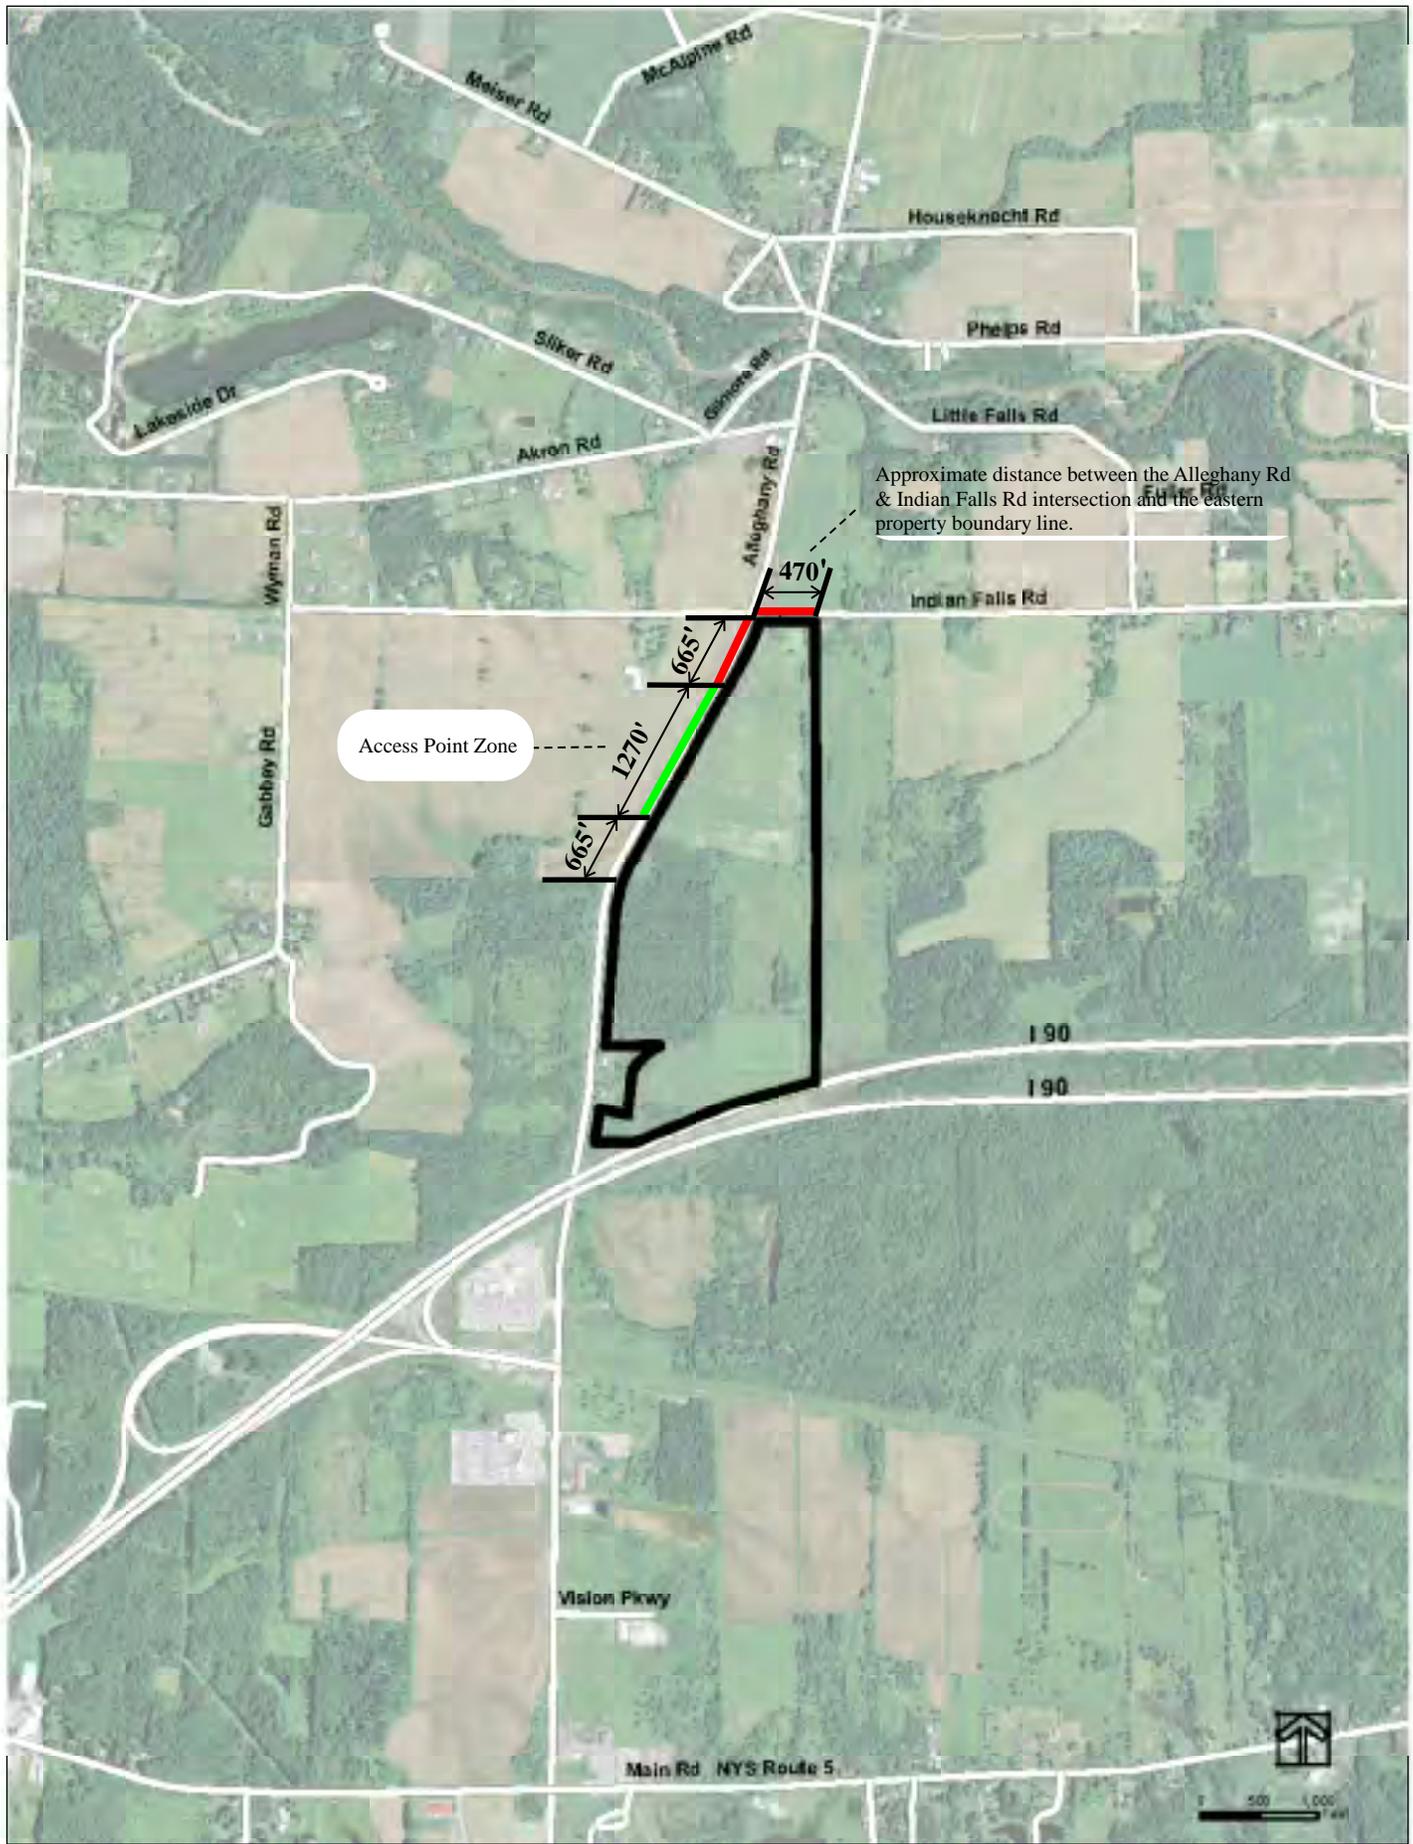

The attached figure shows the estimated limits of the access point zone for a public access point as identified in the site investigation.

Observations

The following observations were made in the determination of an access point zone during the field investigation:

- Access from Route 77 would not occur in wood/wet land areas.
- On Route 77, the horizontal curve to south was the sight constraint at the southern end of the project site.
- On Route 77, the Route 77/Indian Falls Road intersection was the constraint at the northern end of the project site;
 - Sight Constraint – intersection located on crest of a hill.
 - Intersection Spacing Constraint- Functional Area of Intersection.
- No locations were identified for access points on Indian Falls Road due to the proximity of the Route 77/Indian Falls Road intersection to the west and a vertical curve blind-spot to the east that did not meet sight distance criteria

End of Memo

Western New York National Cemetery
 Allegheny Road & Indian Falls Road
 Access Zone Map

Figure 1
 4/10/15

From these sources the following criteria was identified for use in the determination of the access point zone for a single-unit truck:

- Assumed grades of -3% to +3%
- 85th Percentile Speed (Route 77*): ~60 mph
- Stopping Sight Distance: 570 feet
- Intersection Sight Distance:
 - Left turn from driveway: 840 feet - both directions
 - Right turn from driveway: 750 feet – one direction
- Minimum Distance from an Intersection: 605 feet

*Speed data for Indian Falls Road was unavailable

Access Point Zone Determination

An on-site sight distance investigation was conducted on Tuesday April 7th, 2015 to identify a zone in which access points meet the above criteria. The following procedure was used in the field to identify the zone:

1. Sight constraints included horizontal and vertical curves, and existing intersections.
2. At these constraint locations distances from the above criteria were measured.
3. Sight distances were verified at the measured distances utilizing methodology from AASHTO:
 - a. Stopping Sight Distance:
 - i. Height of Drivers Eye: 3.5 feet*
 - ii. Height of Object: 2.0 feet
 - b. Intersection Sight Distance:
 - i. Height of Drivers Eye: 3.5 feet*
 - ii. Height of Object: 2.0 feet
 - iii. Distance from Curb: 10.0 feet

* AASHTO states that for large trucks, the driver's eye height ranges from 3.5 feet to 7.9 feet. To account for lower trucks a conservative value of 3.5 feet was used for the height of driver's eye.

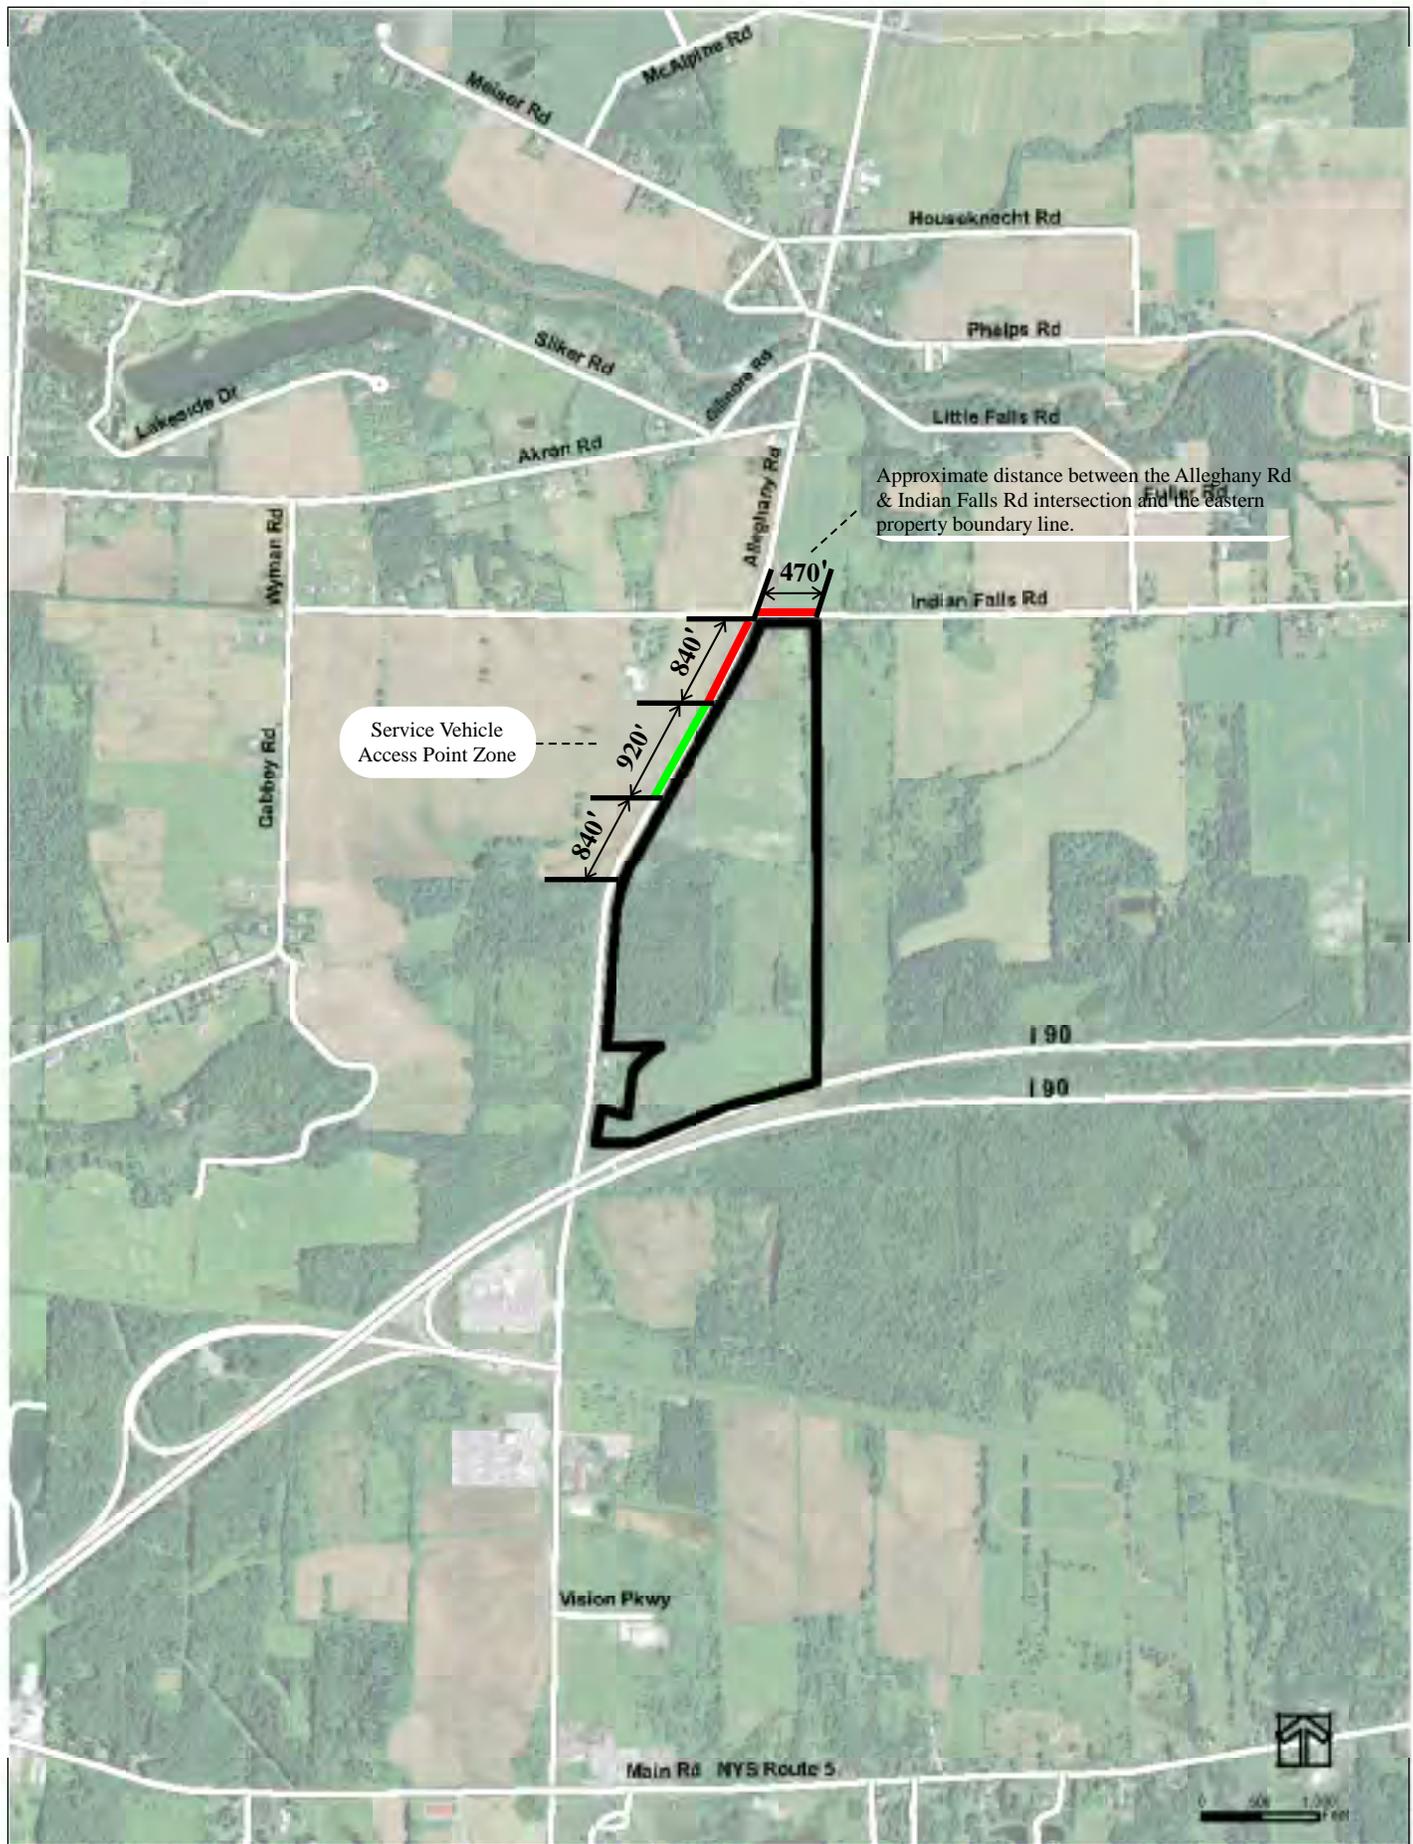

The attached **Figure 2** depicts the estimated limits of the access point zone for a service access point as identified in the site investigation.

Observations

The following observations were made in the determination of an access point zone during the field investigation:

- Access from Route 77 would not occur in wood/wet land areas.
- On Route 77, the horizontal curve to south was the sight constraint at the southern end of the project site.
- On Route 77, the Route 77/Indian Falls Road intersection was the constraint at the northern end of the project site;
 - Sight Constraint – intersection located on crest of a hill.
 - Intersection Spacing Constraint- Functional Area of Intersection.
- No locations were identified for access points on Indian Falls Road due to the proximity of the Route 77/Indian Falls Road intersection to the west and a vertical curve blind-spot to the east that did not meet sight distance criteria

E. ENGINEERING COUNTERMEASURES FOR REDUCING SPEEDS

Engineering Countermeasures for Reducing Speeds: A Desktop Reference of Potential Effectiveness

May 2009

Countermeasure	Area	Road Environment	Reference # (Year)	Sample Size (# of Sites)	After Measurement	Average Daily Volumes		85 th Percentile Speeds			
						Before (veh)	After (veh)	Before (mph)	After (mph)	Change (mph)	%Change
GEOMETRIC FEATURES											
Speed Hump -rounded raised area across the road, typically 12 to 14 feet in length and 3 to 4 inches high	Urban	Local Street	1 (1999)	178		48 to 11544	46 to 11043	35 (4)	27 (4)	-8 (3)	-22% (9%)
		Local Street	2 (2005)	7		400 to 4362	401 to 3384	32 (3)	26 (2)	-6 (2)	-20% (6%)
		Local Street	4 (2000)	4		475 to 1506	433 to 1343	36 (2)	31 (2)	-5 (1)	-15% (3%)
Speed Cushion -speed hump typically 6 to 7 feet wide that allows most emergency vehicles to straddle the hump.	Urban		1 (1999)	1		3323	2321	35 (-)	28 (-)	-7 (-)	-20% (-)
			2 (2005)	2		1042 to 1556	693 to 1563	31 to 37	26 to 30	-5 to -7	-16% to 19%
Speed Table -a long speed hump typically 22 feet in length with a flat section in the middle and ramps on the ends	Urban		1 (1999)	72		198 to 14500	242 to 14400	37 (3)	31 (3)	-6 (3)	-16% (9%)
	Rural	Small town	3 (2008)	2	12 month	1480		33 (1)	29 (2)	-4 (1)	-14% (3%)
		Residential Streets	18 (2003)	19		198 to 2102	364 to 2061	38 (n/a)	29 (n/a)	-9 (n/a)	-24% (n/a)
Raised Intersection -a raised plateau, with ramps on all approaches, where roads intersect	Urban		1 (1999)	2				37 (1)	38 (4)	1 (4)	3% (11%)
	Urban	Local Street	5 (2004)	1				30 (-)	30 (-)	0 (-)	0% (-)
Choker -mid-block curb extensions that narrow a road by extending the sidewalk or widening the planting strip	Urban		1 (1999)	4		770 to 6150	331 to 5040	34 (2)	30 (2)	-4 (1)	-3% (3%)
	Urban	Residential Area	51 (1977)	6				30 (4) 95%tile	29 (3) 95%tile	-1 (2) 95%tile	-3% (7%) 95%tile

Countermeasure	Area	Road Environment	Reference # (Year)	Sample Size (# of Sites)	After Measurement	Average Daily Volumes		85 th Percentile Speeds			
						Before (veh)	After (veh)	Before (mph)	After (mph)	Change (mph)	%Change
Neckdown -intersection curb extensions that narrow a road by extending the width of a sidewalk	Urban		1 (1999)	3		2800 to 8110	4660 to 5660	29 (9)	30 (3)	1 (7)	3% (30%)
	Urban	Local Street	5 (2004)	2				28 (3)	31 (4)	3 (7)	12% (27%)
Chicane -curb extensions that alternate from one side of the street to the other, forming S-shaped curves.	Urban		1 (1999)	2		1380 to 3200	790 to 2400	33 (4)	27 (4)	-6 (1)	-16% (4%)
			4 (2000)	4	at least 4 years	1380 to 1965	790 to 1993	31 (6)	22 (4)	-9 (4)	-29% (8%)
	Urban	School Zone	42 (1998)	1		8000		31 (-)	28 (-)	-3 (-)	-10% (-)
Lateral Shift -curb extension that shifts travel lanes to one side of road for extended distance and then back to the other side	Urban	Local Street	5 (2004)	1				36 (-)	33 (-)	-3 (-)	-8% (-)
	Rural	At City Limits	19 (1999)	5				44 (4)	33 (4)	-11 (7)	-25% (9%)
Center Island -a raised island along the centerline of a street that narrows the travel lanes	Urban		1 (1999)	1		3500	2800	33 (-)	29 (-)	-4 (-)	-12% (-)
Traffic Circle -circular, raised island placed within the middle of an intersection	Urban		1 (1999)	45		240 to 10910	269 to 8280	34 (5)	30 (4)	-4 (3)	-11% (9%)
Roundabout -large, raised, circular islands at the middle of major intersections, around which all oncoming vehicles must travel until reaching their destination street, where they then turn off.		Transition from High to Low Speed	36 (2005)	1				48 (-)	28 (-)	-20 (-)	-42% (-)
	Suburban	Y Intersection of two-lane roads	37 (2005)	1				32 (-)	24 (-)	-8 (-)	-25% (-)

SIGNS

Speed Feedback Sign -sign that dynamically displays speed of passing vehicles with the message "YOUR SPEED XX"	Rural	Main Roads	3 (2008)	1	3 months	2870		37 (-)	30 (-)	-7 (-)	-19% (-)
		15mph School Zone	8 (2002)	1				48 (-)	15 (-)	-33 (-)	-69% (-)
		School Zone	8 (2002)	1				32 (-)	25 (-)	-7 (-)	-22% (-)
		School Zone	14 (2005)	1	2 to 4 months			50 (-)	42 (-)	-8 (-)	-16% (-)
		Advance of School Zone	14 (2005)	2	2 to 4 months			57 (6)	56 (7)	-1 (1)	-2% (3%)
		Advance of Signalized Intersection	14 (2005)	2	2 to 4 months			57 (10)	56 (12)	-1 (2)	-3% (4%)
		Non-freeway	9 (2005)	20	6 to 39 months			35 (3)	32 (2)	-3 (2)	-7% (4%)
		Collector Street/Residential Cross Street	10 (2007)	6	3 years			37 (2)	33 (1)	-4 (2)	-11% (4%)
		School Zone	26 (2006)	8	6 months			25 (2)	24 (2)	-1 (2)	-5% (7%)
	Rural	Work Zone on Interstate Highway	27 (2001)	3	5 weeks	38000		65 (2)	60 (2)	-5 (1)	-8% (1%)
		School Zone	28 (2003)	2	2 months	8000 to 9200		30 (5)	28 (4)	-2 (1)	-7% (1%)
		School Zone	28 (2003)	2	2 months	11800 to 29200		43 (1)	34 (0)	-9 (1)	-22% (1%)
		Two-Lane Collector Arterial, Near to School Zone	29 (2005)	4	7 months	1486 to 2794	1270 to 2533	34 (2)	32 (3)	-2 (1)	-3% (4%)
	Rural	Interstate Highway Work Zone	32 (2006)	1	1 week			65 (-)	63 (-)	-2 (-)	-3% (-)

Countermeasure	Area	Road Environment	Reference # (Year)	Sample Size (# of Sites)	After Measurement	Average Daily Volumes		85 th Percentile Speeds			
						Before (veh)	After (veh)	Before (mph)	After (mph)	Change (mph)	%Change
Speed Activated Warning Sign -sign that displays warning messages to speeding drivers		Posted Speed Limit=50/55mph	17 (2007)	4	at least 3 months					-1.4 (0.1)	
		Work Zone at State Route	25 (2007)	3		122 to 250				-1 to -6.5	
		Multilane US Highway	25 (2007)	1						-1.6 to -4.7	
		Multilane Interstate	25 (2007)	2						-3.0 to -11.2	
	Urban	U.S. Highway Work Zone	32 (2006)	1	1 week			67 (-) PC; 65 (-) Truck	64 (-) PC; 63 (-) Truck	-3 (-) PC; -2 (-) Truck	-4% (-) PC; -3% (-) Truck
	Urban & Rural	Work Zone	35 (2007)	2				54 (4)	49 (6)	-5 (3)	-10% (5%)
	Rural	Four-Lane Divided Highway	43 (1999)	1		7000		73 (-)	69 (-)	-4 (-)	-5% (-)
		Curve on Interstate Freeway	44 (2003)	1		65000		63 (-)	62 (-)	-1 (-)	-2% (-)
Speed Activated Speed Limit Reminder Sign		Major Road	6 (2005)	1				42 (-)	37 (-)	-5 (-)	-12% (-)
		School Zone	24 (2001)	1	2 months			43 (-)	37 (-)	-6 (-)	-14% (-)
Variable Speed Limit Sign	Rural	Finland, weather-controlled	31 (1999)	3						-4.7 to -8	
	Rural	Freeway	40 (2005)	2				82 (1)	77 (6)	-5 (5)	-6% (6%)
Lower Speed Limit by 15+ mi/h	Urban & Rural	2 lane roads	21 (1997)	9	12-24 months			49 (5)	49 (4)	-0.1 (1)	-0.1% (3%)
Lower Speed Limit by 10 mi/h	Urban & Rural	2 & 4 lane roads	21 (1997)	34	12-24 months			50 (5)	50 (5)	-0.1 (1)	-0.6% (2%)
Lower Speed Limit by 5 mi/h	Urban & Rural	2 lane roads	21 (1997)	14	12-24 months			51 (6)	50 (6)	-0.3 (1)	-0.1% (2%)
Red Border Speed Limit Sign	Rural	Two-Lane highway	30 (2007)	3	8 to 14 months					-3 (4)	
One-Direction Large Arrow (W1-6) sign	Rural	Horizontal Curves	20 (2005)	1	5 days			47 (-)	47 (-)	0 (-)	0% (-)

Countermeasure	Area	Road Environment	Reference # (Year)	Sample Size (# of Sites)	After Measurement	Average Daily Volumes		85 th Percentile Speeds			
						Before (veh)	After (veh)	Before (mph)	After (mph)	Change (mph)	%Change
Add Flashers to Existing Curve Warning Sign	Rural	Horizontal Curves	20 (2005)	2	5 days			51 (2)	52 (3)	1 (1)	1% (1%)
Add Flags to Existing Curve Warning Sign	Rural	Horizontal Curves	20 (2005)	3	5 days			49 (3)	49 (3)	-0.3 (1.3)	-0.6% (3%)
Combinational Horizontal Alignment/Advisory Speed Sign	Rural	Horizontal Curves	20 (2005)	3	5 days			49 (3)	50 (2)	0.2 (1)	0.4% (2%)
Chevron Sign	Rural	Horizontal Curves	20 (2005)	1	5 days			52 (-)	52 (-)	0 (-)	0% (-)
NARROWING											
Add Shoulder Markings to narrow lane	Rural	Two-Lane Road Through Small Town	3 (2008)	2	12 months			33 (2)	33 (1)	0.5 (1)	2% (2%)
	Urban	Freeway Exit Ramp	49 (2000)	4	2 weeks			38 (10)	37 (9)	-1 (1)	-2% (2%)
Add Center Line and Edge Line	Rural	Main Roads	3 (2008)	2	12 months			34 (1)	35 (1)	1 (1)	2% (2%)
	Urban	Residential Area	50 (1984)	2	2 weeks			34 (2) Mean	34 (1) Mean	0 (0) Mean	1% (1%) Mean speed
	Rural	Two-Lane Road Day	52 (2006)	3				63 (2)	64 (3)	1 (4)	2% (7%)
	Rural	Two-Lane Road Night	52 (2006)	3				66 (4)	65 (3)	-1 (0)	-1% (0)
Longitudinal Rumble Strips -raised or grooved patterns installed on both inside edges of normal travel lane to narrow effective width	Rural	Rural High Speed Intersections on Two-lane Roadways	16 (2008)	9	at least 3 months					-4.5 (0.25)	
Road Diet -restripe road to reduce the number of lanes from 4 to 3	Urban	Arterial road	41 (1999)	1		24,000		51 (-)	47 (-)	-4 (-)	-8% (-)
Tubular Chnelizers -three foot high tubes used to create island in center of road	Rural	Main Roads	3 (2008)	3	12 months	2060		40 (5)	39 (4)	-1 (1)	-2% (2%)

Countermeasure	Area	Road Environment	Reference # (Year)	Sample Size (# of Sites)	After Measurement	Average Daily Volumes		85 th Percentile Speeds			
						Before (veh)	After (veh)	Before (mph)	After (mph)	Change (mph)	%Change
ACCESS CONTROLS											
Half Closure -Physical blockage of one direction of traffic for a short distance on a two-way street	Urban		1 (1999)	11		220 to 9540	151 to 9180	30 (4)	24 (5)	-6 (4)	-20% (12%)
Diagonal Diverter -a barrier placed diagonally across a four-legged intersection, preventing through movement	Urban		1 (1999)	7		474 to 2057	177 to 574	28 (5)	27 (5)	-1 (5)	-5% (17%)
Full Closure -physical street closure resulting in a dead-end	Urban		1 (1999)	2		1540 to 1980	850 to 1080	18 (3)	15 (3)	-3 (0)	-17% (3%)
COMBINATION MEASURES											
Gateway Treatment -the combined use of signs, textured pavements, name plates, monuments, landscaping, and/or others placed at the entrance to a neighborhood that helps to communicate a sense of neighborhood identity	Rural	Main Roads	3 (2008)	3	12 months			46 (6)	44 (6)	-2 (2)	-5% (4%)
	Urban		5 (2004)	1	9 months			30 (-)	28 (-)	-2 (-)	-7% (-)
Speed Hump + Speed Table	Urban		1 (1999)	4				36 (3)	29 (2)	-7 (4)	-17% (9%)
Speed Hump + Choker	Urban		1 (1999)	2		2456 to 3685	2593 to 2931	38 (2)	25 (0)	-13 (2)	-33% (3%)
Speed Table + Choker	Urban		1 (1999)	3				33 (1)	29 (1)	-4 (1)	-12% (3%)
Speed Table + Center Island	Urban		1 (1999)	2		6500 to 8440	6400 to 6780	37 (1)	29 (1)	-8 (3)	-22% (6%)
Half Closure + Median Barrier (-Median barriers are raised islands located along the centerline of a street and continuing through an intersection so as to block through movement at a cross street.)	Urban		1 (1999)	2		10160 to 10320	1120 to 2120	38 (2)	32 (4)	-6 (3)	-17% (8%)

Countermeasure	Area	Road Environment	Reference # (Year)	Sample Size (# of Sites)	After Measurement	Average Daily Volumes		85 th Percentile Speeds			
						Before (veh)	After (veh)	Before (mph)	After (mph)	Change (mph)	%Change
Transverse Bar + Speed Feedback Sign	Rural	Main Roads	3 (2008)	3	12 months	830 to 1680		47 (6)	43 (8)	-4 (3)	-8% (8%)
Speed Hump + Traffic Circle + Gateway Treatment			2 (2005)	2		2017 to 4213	1857 to 4635	32 (1)	25 (3)	-7 (2)	-22% (6%)
Textured Pavement + Neckdown + Pavement Marking			2 (2005)			3722 to 3792	3603	31 (-)	31 (-)	0 (-)	0% (-)
Edge Marking + Speed Limit Marking	Rural	Main Roads	3 (2008)	4	12 months			34 (3)	33 (2)	-1 (1)	-1% (4%)
Rubber Pedestrian Island + In-Roadway Yield to Pedestrian Crossing Sign (R1-6) (-Removable rubber curbing used to create island and concentrate pedestrian crossings at crosswalk.)	Rural Resort Area	High pedestrian crossing	22 (2002)	2	2 weeks			44 (2)	38 (1)	-6 (3)	-14% (6%)

Notes:

- 1) Reference table only includes U.S. studies, except where no U.S. studies on a treatment exist, then international studies are used.
- 2) Measures within parentheses in the "85th Speeds" columns represent the standard deviations from the average values.

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

EXECUTIVE SUMMARY -

This Traffic Study was conducted for the Western New York National Cemetery project located in the southeast corner of the intersection of Alleghany Road (Route 77) and Indian Falls Road in Pembroke, NY. It is a supplemental assessment to the original traffic study (dated May 11, 2015) to consider a relocated full use public access point onto Indian Falls Road. The purpose of this traffic assessment is to:

- Provide guidance on access point location, geometry and controls.
- Assess the potential effects of the Cemetery's generated vehicular traffic, from daily/routine - operations, on the adjacent roadway network. -
- Determine potential roadway improvements within the public right-of-way.

This supplemental traffic assessment builds off of the original traffic study. The operational analysis and documentations conducted for the original traffic study are considered applicable for this traffic assessment. This includes:

- Established morning and afternoon study time periods
- Existing Conditions
- Background Conditions
- Trip Generation Development

Based on the original traffic study, acceptable capacity and operations were documented at the intersection of Route 77/Indian Falls Road for Existing and Background (2017) conditions.

Temporary construction access points will be utilized during the construction of the Western New York National Cemetery. The construction access points are expected to function within acceptable standards due to their anticipated low volumes, the use of flag men, and their temporary usage.

Guidance on a potential access point location was facilitated by sight distance evaluations, which were used to identify a section (access zone) of Indian Falls Road where the public access point should be located. Based on these evaluations, a public access zone of approximately 195 feet was identified along Indian Falls Road. The location of the proposed public access point on Indian Falls Road (from the Western New York National Cemetery Overall Master Plan) is within the determined public access zone. Sight distance approximations for this proposed access point were documented. At this specific location, the observed sight distances were greater than desired intersection and stopping sight distances criterion.

The Trip Generation data established in the original traffic study are considered applicable for this traffic assessment and is summarized in the following table:

**Western New York National Cemetery
Supplemental Traffic Study – Indian Falls Road**

Trip Generation Data Table -

Morning Trip Generation 8:00-9:00 AM		
Trip Generator	Enter	Exit
Employee	7	0
Cortage	30	0
Visitor	10	5
Total	47	5
Afternoon Trip Generation 3:00-4:00 PM		
Trip Generator	Enter	Exit
Employee	0	7
Cortage	30	30
Visitor	10	20
Total	40	57

The estimated trip generation for the Cemetery was distributed onto the adjacent roadway network at the proposed public access point, and generally assumed that approximately 75% of the trips to the Cemetery would arrive from and return to points south of the site; with the remaining 25% of the trips to the Cemetery arriving from and returning to points north of the site. This distribution pattern assumed the Cemetery to be a destination type of land use and a majority of the traffic would arrive and leave the study area using the Thruway (I-90).

Operational analysis for proposed conditions, which included the Cemetery trips distributed onto the study area, was initially conducted assuming existing roadway geometry for the intersection of Route 77/Indian Falls Road and that the Cemetery’s public access would be stop controlled on the Cemetery approach with one lane exiting and one lane entering the property with no left or right turn lanes on Indian Falls Road. The analysis indicated that each intersection is predicted to operate acceptably, Level of Service results of ‘c’ or better.

No changes in volumes or operations at the Proposed Service Access point from the original traffic study are anticipated. It is projected that the service access point for the Cemetery will accommodate less than 10 trips during either of the two analysis periods on a typical day. Given the very low traffic volumes and sporadic use of the service access, a detailed capacity analysis was not conducted; however, acceptable levels of operations are expected.

A qualitative review of traffic signal warrants determined neither intersection is an appropriate candidate for traffic signal control.

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

As indicated by the operational analysis, mainline left and right turn lanes at the public access point on Indian Falls Road and on Route 77 at the Route 77/Indian Falls Road intersection are not necessary to achieve acceptable Levels of Service for the Cemetery's typical operations.

A review of the left and right turn lane warrants were conducted at the two intersections to determine if turn lanes should be considered based on traffic volumes and speeds alone. The results of the turn lane warrant review indicate that left and right turn lanes are not warranted at the public access point on Indian Falls Road. The Route 77/Indian Falls Road intersection warrants a right turn lane on the northbound approach and the southbound approach minimally meets the thresholds for a left turn lane.

Given the higher travel speeds on Route 77 coupled with the predominant driver types connected with the Cemetery (older, unfamiliar with the area, and potentially preoccupied by their visit), it is recommended that a northbound right turn lane be provided at the Route 77/Indian Falls Road intersection to reduce the potential for accidents.

The southbound approach only minimally meets the thresholds for a left turn lane. Since it only minimally meets the thresholds for a left turn lane others factors were reviewed to determine if a southbound left turn lane is recommended. The review determined that there are minimal vehicles destined for the cemetery on this approach and the results of the operational analysis indicate that a southbound left turn lane is not needed. Therefore, it is recommended that a southbound left turn lane not be implemented at the Route 77/Indian Falls Road intersection.

It is recommended, as part of the detailed design process, that the turn lane geometries be refined to identify a best-fit turn lane geometric to account for the physical constraints of the roadway network and desirable conditions to accommodate the Cemetery's functions and activities.

In Summary, the following transportation related conclusions, recommendations and considerations are provided to accommodate the public access point on Indian Falls Road for the Western New York National Cemetery:

- The proposed public access point on Indian Falls Road is acceptably located within the 195 feet public access zone and the observed sight distances were greater than desired intersection and stopping sight distances criterion.
- Acceptable levels of service are predicted for the public access point with the Cemetery approach being stop sign controlled with one lane exiting and one lane entering and no auxiliary turn lanes on the mainline approaches.
- It is recommended a northbound right turn lane be provided at the Route 77/Indian Falls Road intersection to provide a deceleration lane and reduce the potential for accidents. As part of the detailed design process, the turn lane geometries should be refined to identify a best-fit turn lane geometric to account for the physical constraints of the roadway network and desirable conditions to accommodate the Cemetery's functions and activities.

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

I. Introduction

A traffic assessment (original traffic study) dated May 11, 2015 was conducted for the U.S. Department of Veterans Affairs (VA) proposed Western New York National Cemetery (Cemetery) located in Pembroke, NY. The original traffic study evaluated consideration of a public access point to the proposed cemetery located on Alleghany Road (Route 77).

Following the completion of the original traffic study an adjoining parcel to the proposed cemetery was purchased. With the acquisition of the adjoining parcel came the opportunity for a potential relocated full use public access point onto Indian Falls Road through the adjoining parcel.

The following traffic assessment is a supplemental assessment to the original traffic study to consider the full use public access point onto Indian Falls Road. The purpose of this traffic assessment is to:

- Provide guidance on access point location, geometry and controls.
- Assess the potential effects of the Cemetery's generated vehicular traffic, from daily/routine operations, on the adjacent roadway network.
- Determine potential roadway improvements within the public right-of-way.

This supplemental traffic assessment builds off of the original traffic study. The operational analysis and documentations conducted for the original traffic study are considered applicable for this traffic assessment. This includes:

- Established morning and afternoon study time periods
- Existing Conditions
- Background Conditions
- Trip Generation Development

The original traffic study is included, for reference, in the **Appendix** of this report.

The project site is located in the town of Pembroke, NY along the eastern side of Route 77 between Indian Falls Road (to the north) and NY I-90 (to the south). The study area encompasses the segments of Route 77 and Indian Falls Road adjacent to the project site and the intersection of Route 77/Indian Falls Road. The land uses bordering the project site are active agricultural land with undeveloped woodland/wetland area and a few residential properties. **Figure 1** provides a project location map. **Figure 2** identifies the proposed project area.

The following sections of the report document analysis procedures, technical assumptions, and vehicular operations, conclusions and recommendations. -

II. Capacity Analysis Methodology

Intersection capacity analysis was conducted using Synchro, Version 8.0 software¹. The program is based on methods presented in the 2010 Highway Capacity Manual² that describes the levels of operation of intersections controlled by signals and regulated by stop signs.

Using an analytical approach, a Level of Service is determined for traffic travelling through an intersection. The Level of Service is defined or quantified in terms of average delay experienced by motorists, which is equated to the letters 'a' to 'f' for stop sign controlled intersections. The following provides delay descriptions for each level of service:

Stop Sign Controlled Intersections

- a 10 seconds or less
- b 10.1 to 15 seconds
- c 15.1 to 25 seconds
- d 25.2 to 35 seconds
- e 35.1 to 50 seconds
- f Greater than 50 seconds

From experience, a Level of Service 'd' for a stop controlled intersection is generally considered to be the threshold of acceptable operations in a rural setting.

III. Existing & Background Conditions

The Existing and Background Conditions established in the original traffic study are considered applicable for this traffic assessment.

Based on the original traffic study, a morning study period of 8:00-9:00 AM was chosen for operational capacity analysis to capture the peak traffic generating morning period of the cemetery. Similarly, an afternoon study period of 3:00-4:00 PM was chosen for operational capacity analysis to capture the peak afternoon traffic generating period of the Cemetery.

Existing conditions traffic volume data for the morning and afternoon study periods are depicted on **Figure 3** and **Figure 4**, respectively.

Existing conditions capacity analysis (from the original traffic study) indicated a Level of Service (LOS) 'c' or better, for all movements within the study intersection, for both time periods. Capacity analysis results are summarized in **Table 2** in **Section IV.E.** of this assessment.

Evening Study Period

Figure 4

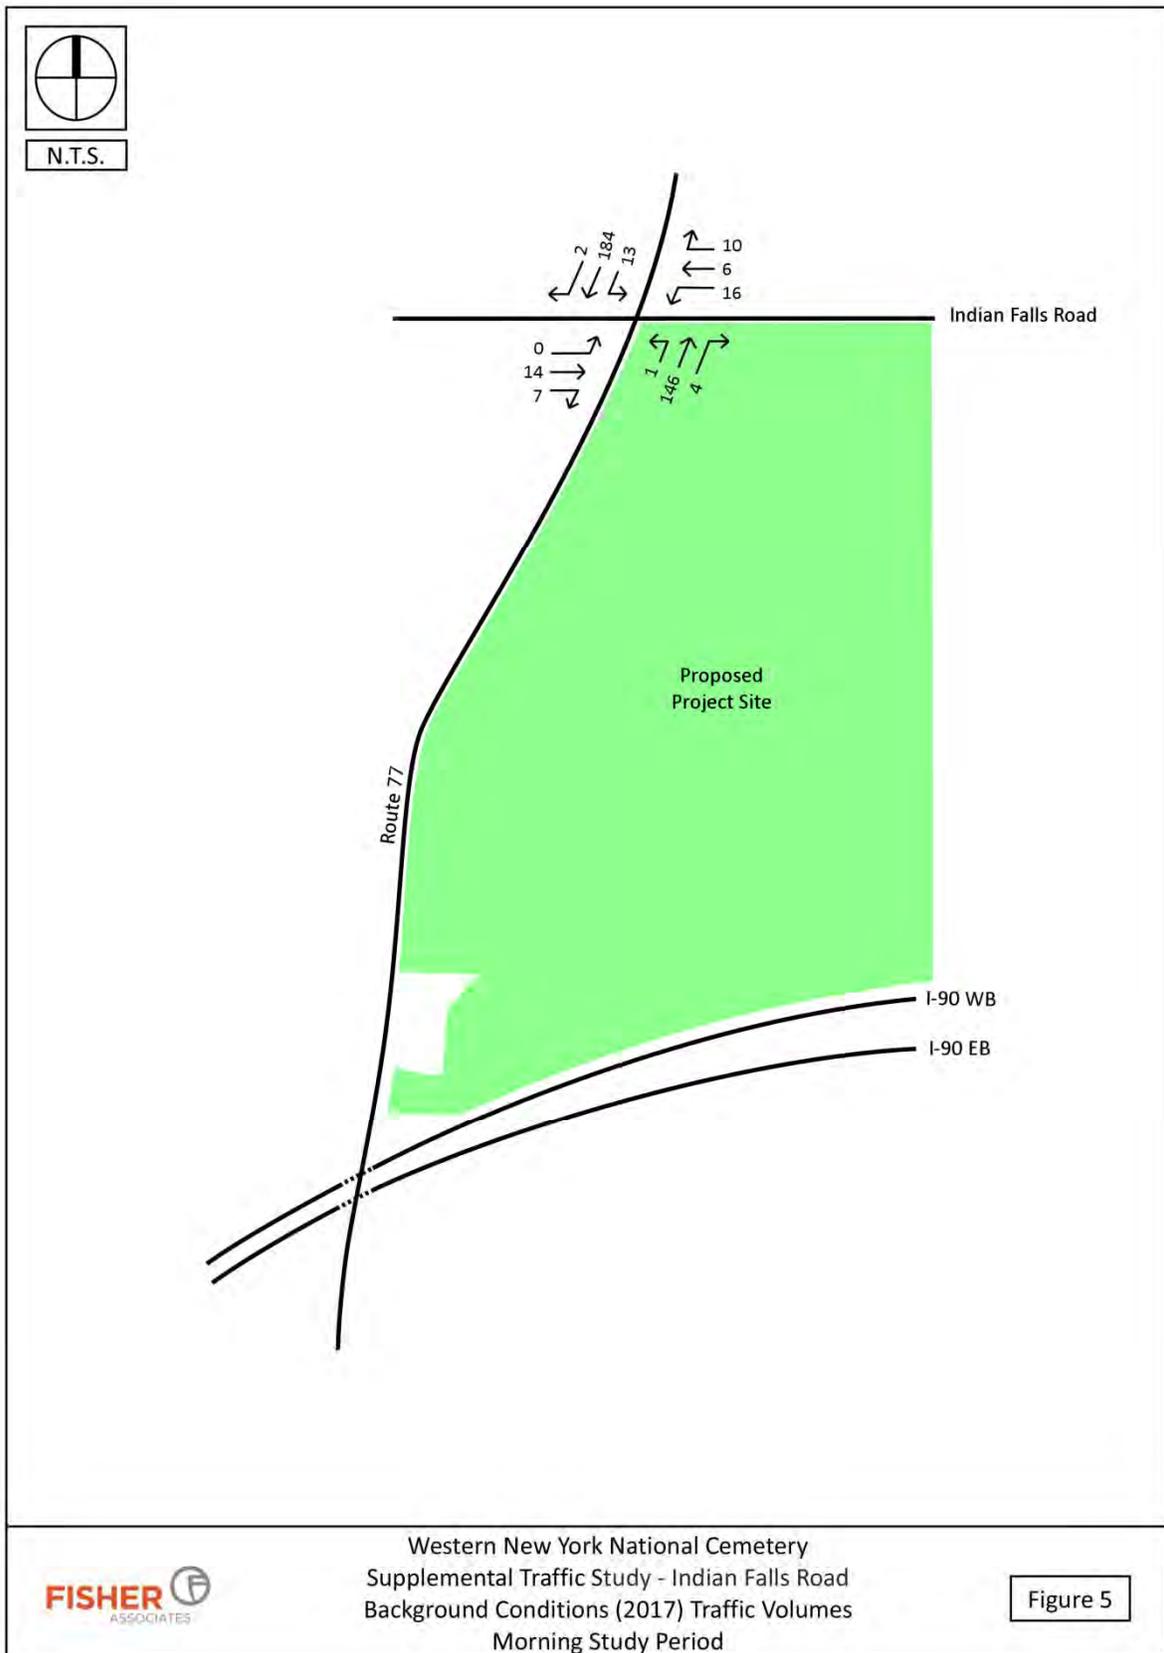

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

Background Conditions were established for the year 2017. **Figure 5 and Figure 6** depict morning and afternoon Background Conditions traffic volumes respectively.

The background conditions capacity analysis (from the original traffic study) indicated a Level of Service of 'c' or better for all movements within the study intersection, for both time periods. These results are indicative of a roadway network that is projected to operate without significant capacity constraints well into the immediate future.

Capacity analysis results are summarized in **Table 2** in **Section IV.E.** of this assessment.

IV. Construction

Temporary construction access points will be utilized during the construction of the Western New York National Cemetery. These access points are shown in **Figure 2** in **Section I**.

It is anticipated that the construction access points will serve a minimal volume of vehicles (similar to the proposed service access point). Also, a higher volume main access point on Route 77 was assessed in the original traffic study and projected acceptable operations. Therefore, the construction access points are expected to operate acceptably.

Two of the construction access points (points on northern end of Route 77 & Indian Falls Road) are located outside of the Access Point Zones identified in the original traffic study and **Section V.A.** of this study. Flag men following the standards in the Manual on Uniform Traffic Control Devices (MUTCD)³ will be provided by the contractor to mitigate this issue.

The construction access points are expected to function within acceptable standards due to their anticipated low volumes, the use of flag men, and their temporary usage.

V. Future Conditions

A. Access Point Sight Distance Evaluation

A sight distance evaluation was conducted along the project's property fronting Indian Falls Road on March 22, 2016 to both identify an appropriate zone in which to locate a full use public access point and approximate the sight distances at the proposed full use public access point. Criterion for conducting this evaluation was obtained from ASSHTO's A Policy on Geometric Design of Highways and Streets⁴, FHWA's Access Management in the Vicinity of Intersections⁵ and NYSDOT's Highway Design Manual⁶.

From these sources the following desired sight distances on Indian Falls Road were identified:

- Assumed grades of -3% to +3%
- 85th Percentile Speed (Indian Falls Road):
 - Eastbound-45 mph
 - Westbound-60 mph
- Stopping Sight Distance:
 - Eastbound-360 feet
 - Westbound-570 feet
- Intersection Sight Distance:
 - Left turn from driveway:
 - 630 feet to left
 - 840 feet to right
 - Right turn from driveway: 565 feet – to left
- Minimum Distance from an Intersection: 640 feet

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

Additionally, based on field observations, it was assumed that:

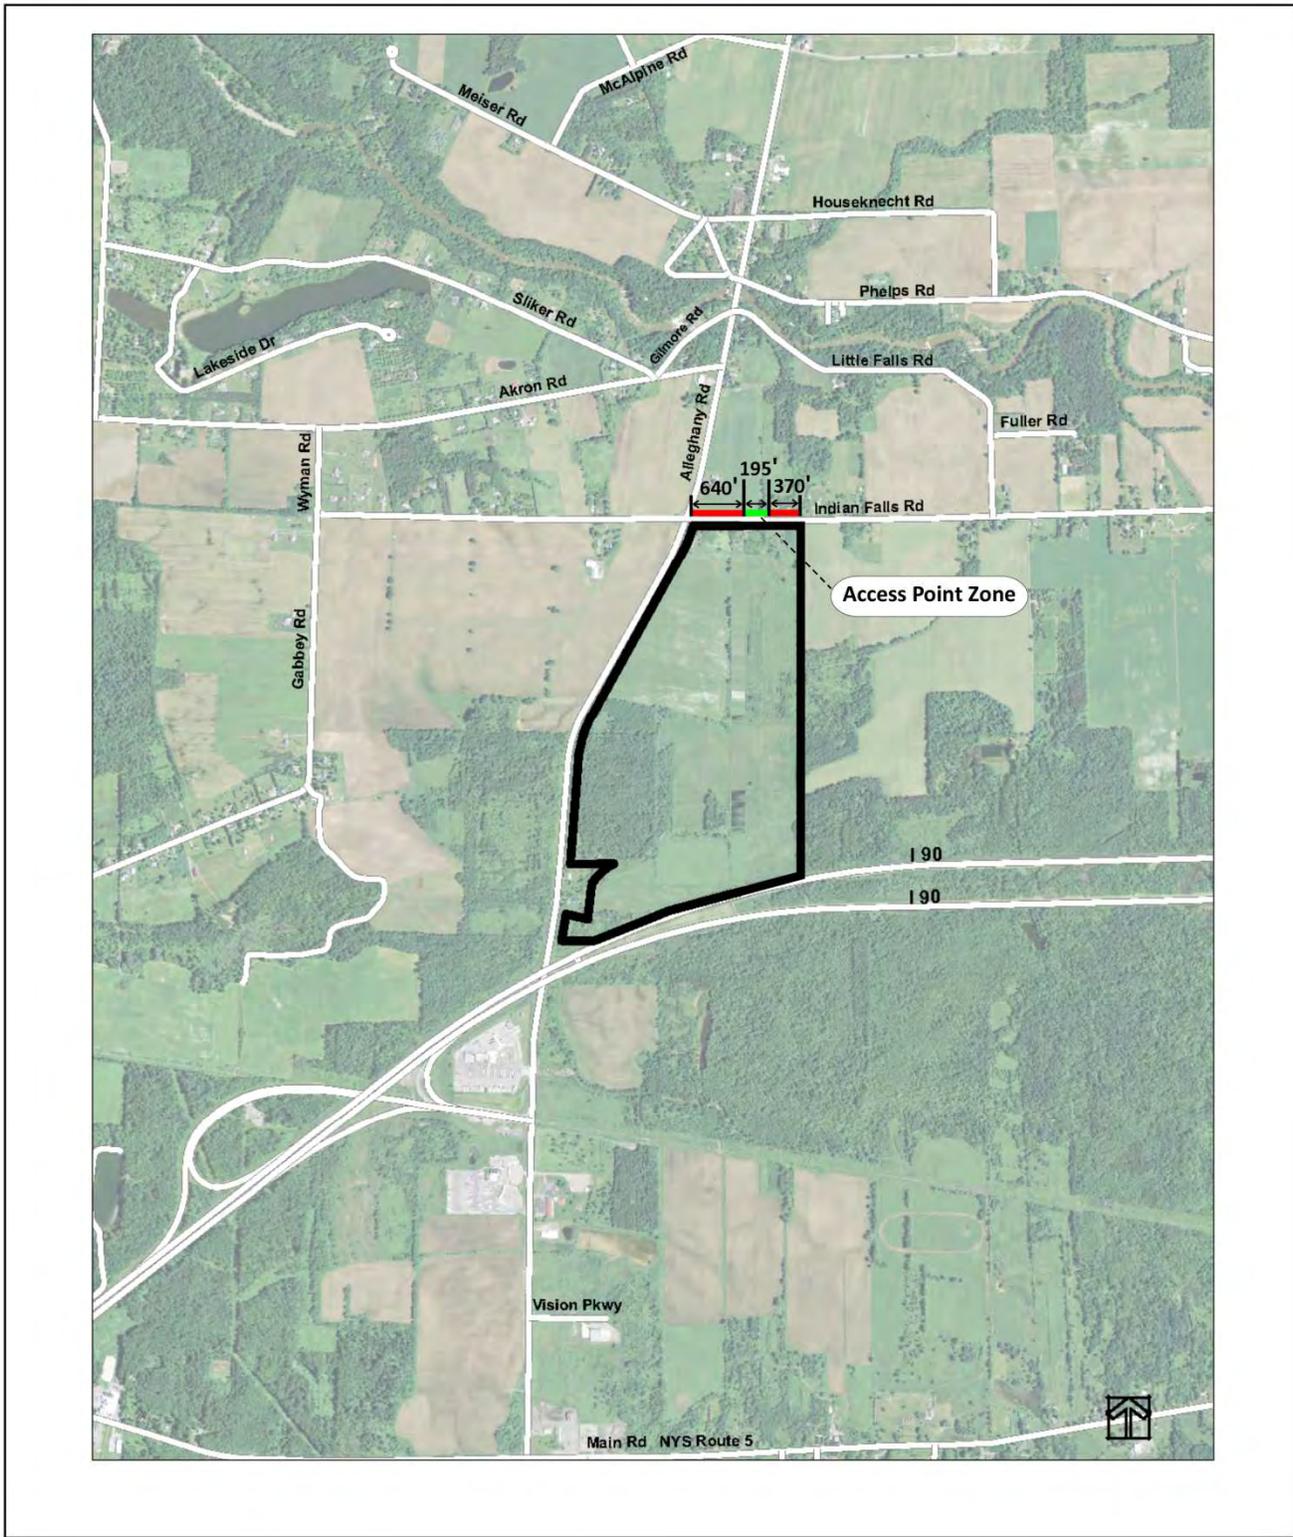

- The intersection of Route 77 and Indian Falls Road was the sight limit to the west.
- The vertical curve on Indian Falls Road was a sight constraint to the east.
- The estimated functional area of the Route 77 and Indian Falls Road intersection was used to determine the intersection separation constraint.
- A maintenance delivery vehicle (single-unit truck) was used for the determination of the desired sight distances on Indian Falls Road to provide a conservative sight distance evaluation.
 - The primary vehicle type using the public access point will be a passenger vehicle (car, suv or light truck).
 - Maintenance delivery vehicles will also be using this entrance for occasional deliveries to the administration building.
 - The Early Turnover Area will have semi-trucks coming into this entrance for the first two years of cemetery operation until the permanent maintenance area is operational. However, this is a temporary situation and, therefore, was not utilized for the determination of the access point sight distances.

Based on this evaluation, a public access zone of approximately 195 feet was identified along Indian Falls Road. See **Figure 7**

The location of the proposed public access point on Indian Falls Road (from the Western New York National Cemetery Overall Master Plan, included in **Appendix**) is approximately 700 feet east of the Route 77/Indian Falls Road intersection which is within the determined public access zone. Sight distance approximations for this access point were documented. At this specific location, the observed sight distances were greater than the desired intersection and stopping sight distances listed above. **Figure 8** and **Figure 9** present the observed intersection and stopping sight distances, respectively.

The findings of this investigation are considered close approximations based on direct field observation measurements. Measurements were not obtained through the use of a survey crew and survey instruments.

B. Trip Generation

The Trip Generation data established in the original traffic study are considered applicable for this traffic assessment; any minor changes in these numbers are anticipated to have no noticeable impact to the study area intersections. **Table 1** below provides morning and afternoon study period trip generation summary from the original traffic study.

**Table 1
Summary of Trip Generation**

Morning Trip Generation 8:00-9:00 AM		
Trip Generator	Enter	Exit
Employee	7	0
Cortage	30	0
Visitor	10	5
Total	47	5
Afternoon Trip Generation 3:00-4:00 PM		
Trip Generator	Enter	Exit
Employee	0	7
Cortage	30	30
Visitor	10	20
Total	40	57

C. Trip Distribution

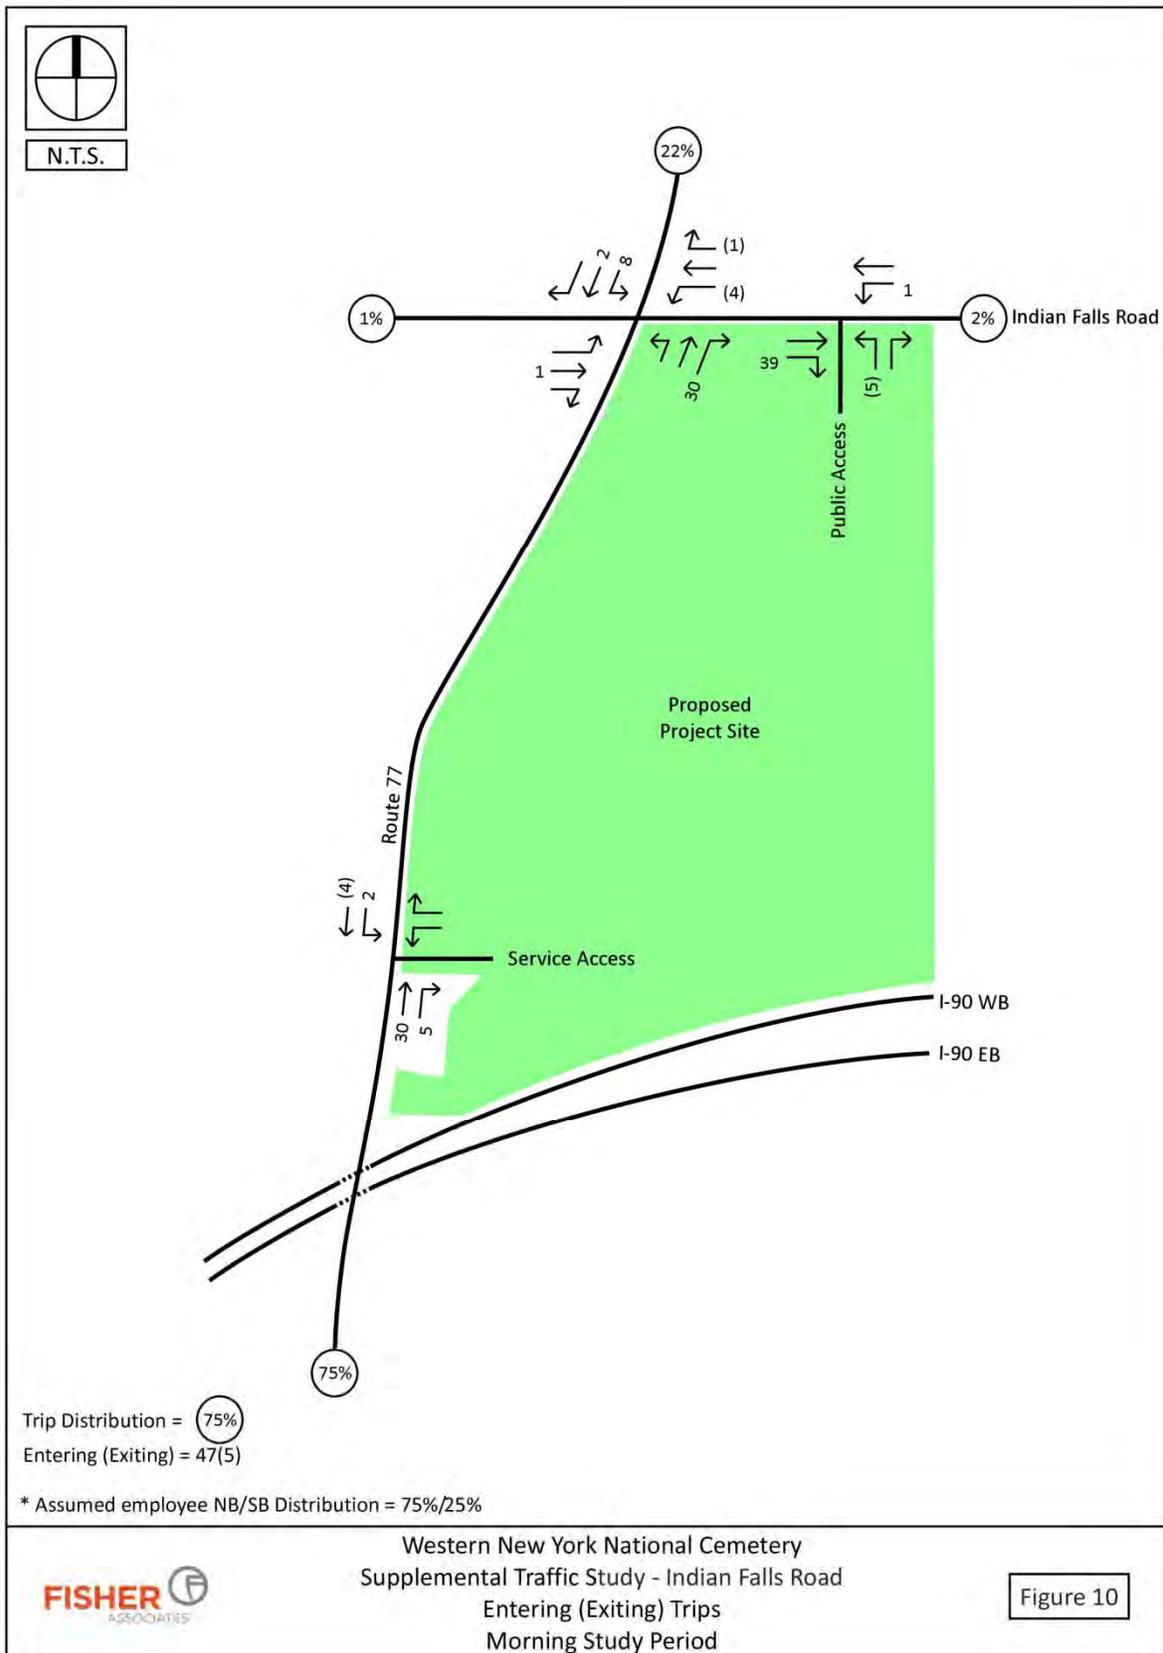

Approximately 1/3rd of a mile south of the Cemetery site on Route 77 is NYS I-90 Exit 48-Pembroke. NYS I-90 is an east-west toll road that stretches across Upstate New York and is expected to serve a significant percentage of the traffic destined for the Cemetery.

Hence, it was estimated that 75% of Cemetery trips traveling from and returning to south of the site are expected to travel I-90 Exit-48, and approximately 25% of Cemetery trips travelling from and returning to north of the site are expected to travel through the intersection of Route 77/Indian Falls Road.

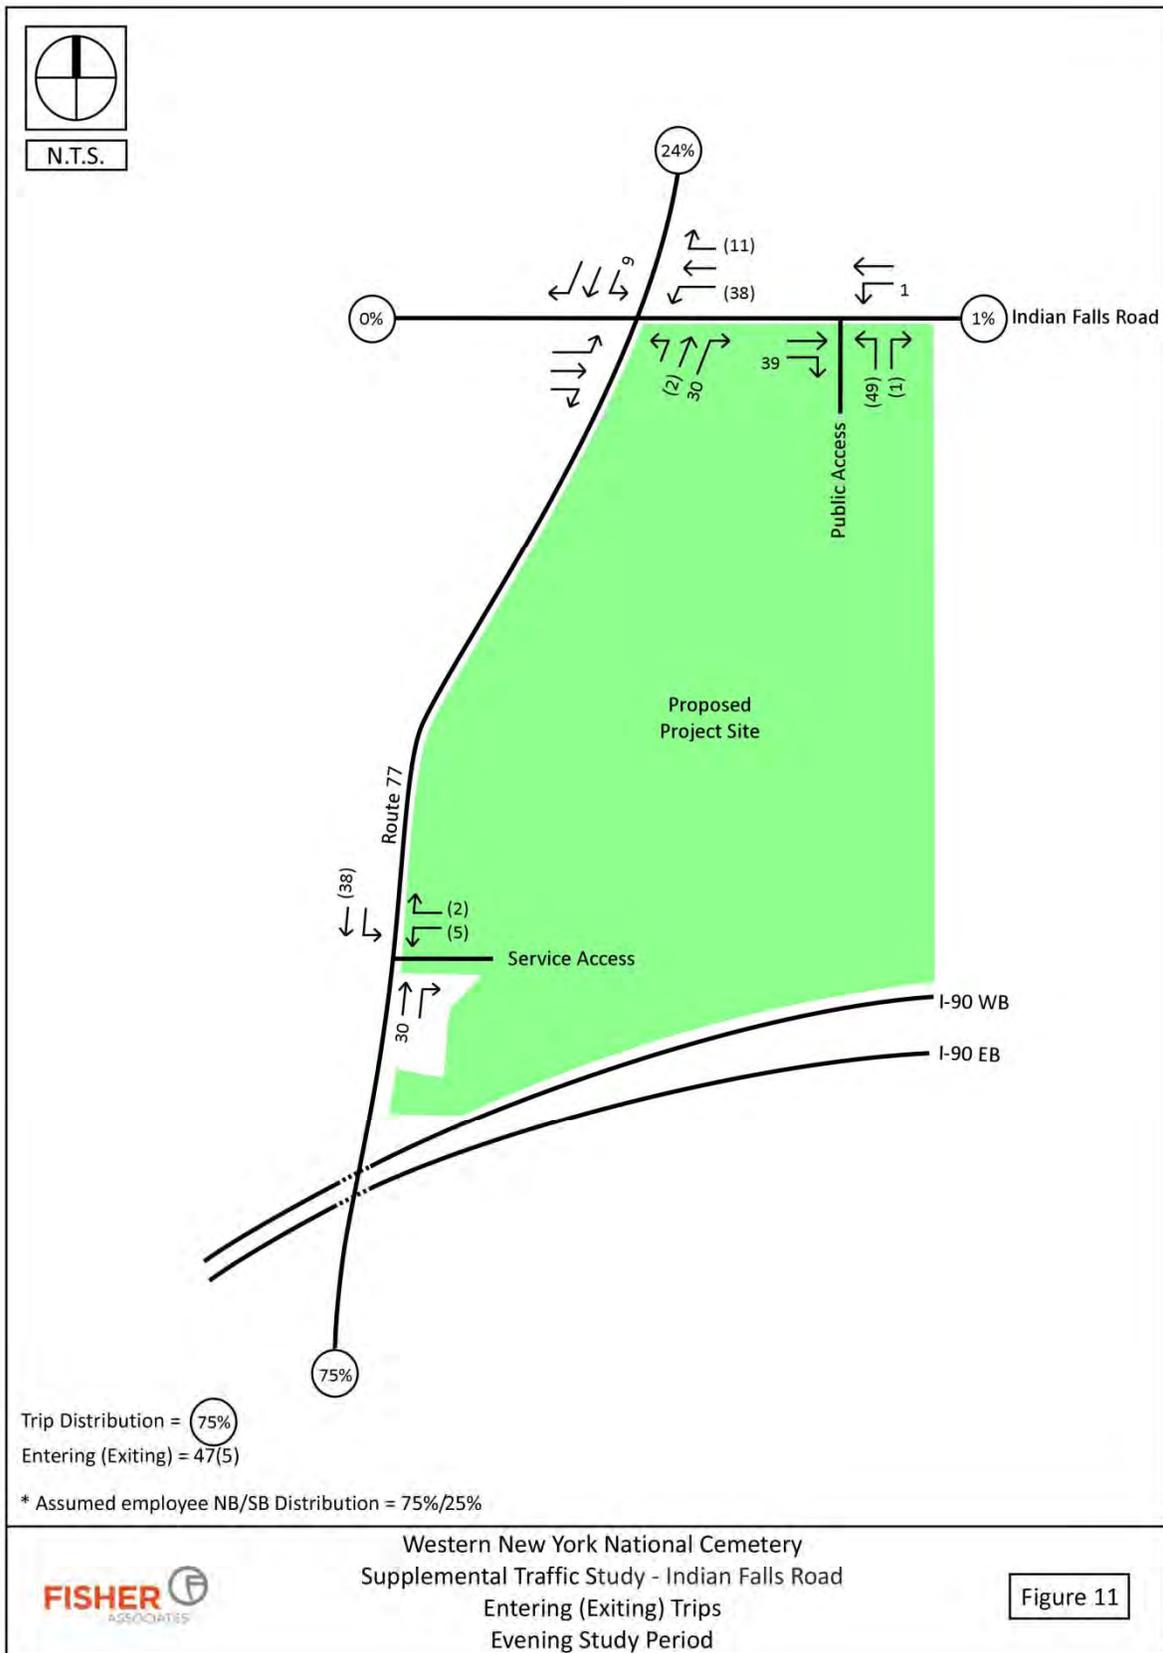

Cemetery trips arriving from and returning to north of the site via the Route 77/Indian Falls Road intersection were distributed based on turning movement count volume data collected April 16, 2015. Trips entering and exiting the project site were distributed based on their trip generator categorization (employee, visitor, and cortage) to determine the appropriate trip across the access point distributions. It was assumed that maintenance employees will utilize the Service Access Point on Route 77.

Morning and afternoon trip distributions in the form of entering and exiting percentages along with actual new trips are provided in **Figure 10** and **Figure 11**, respectively.

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

D. Cemetery Related Operations & Capacity Analysis

To conduct operational capacity analysis for the intersection of Route 77/Indian Falls Road and the Indian Falls Road/Public Access point, the Cemetery's trip generation was applied to background conditions traffic volumes. Future Conditions morning and afternoon traffic volumes are provided in **Figures 12 and 13**, respectively.

Initially, based on the projected future traffic volumes, the operational capacity analysis assumed the Cemetery's public access would be stop controlled on the Cemetery approach with one lane exiting and one lane entering the property with no left or right turn lanes on Indian Falls Road.

No changes in volumes or operations at the Proposed Service Access point from the original traffic study are anticipated. It is projected that the service access will serve less than 10 vehicles during either of the two study periods on a typical day. Therefore, due to these minimal traffic volumes, the service access point is expected to operate acceptably.

Results of the capacity analysis indicate that all movements within the study intersections are expected to operate at a Level of Service 'c' or better during both analysis hours. Capacity analysis results are summarized in **Table 2** in **Section IV.E.** of this assessment.

Capacity analysis summary reports for future conditions are provided in the **Appendix** of this report.

The 2009 edition of the Manual of Uniform Traffic Control Devices (MUTCD) Chapter 4C³ provides nine signal warrants to evaluate the need for a traffic signal at an intersection. A qualitative review of signal warrants indicated signal control is not applicable at the Route 77/Indian Falls Road intersection or the Indian Falls Road/Public Access intersection, which is further supported by the acceptable level of service 'c' or better for side street stop control.

Supplemental Traffic Study - Indian Falls Road
Future Conditions (2017) Traffic Volumes
Evening Study Period

Figure 13

Western New York National Cemetery Supplemental Traffic Study – Indian Falls Road

E. Turn Lane Evaluation – Safety Considerations

As indicated by the operational analysis, mainline left and right turn lanes at the public access point on Indian Falls Road and on Route 77 at the Route 77/Indian Falls Road intersection are not necessary to achieve acceptable Levels of Service for the proposed traffic demands related to the more routine/typical weekday Cemetery activities associated with visitors, burial corteges and staffing.

A review of the left and right turn lane warrants, contained in the **Appendix**, were conducted at the two intersections to determine if turn lanes should be considered based on traffic volumes and speeds alone. The results of the turn lane warrant review indicate that left and right turn lanes are not warranted at the public access point on Indian Falls Road. The Route 77/Indian Falls Road intersection warrants a right turn lane on the northbound approach and the southbound approach minimally meets the thresholds for a left turn lane.

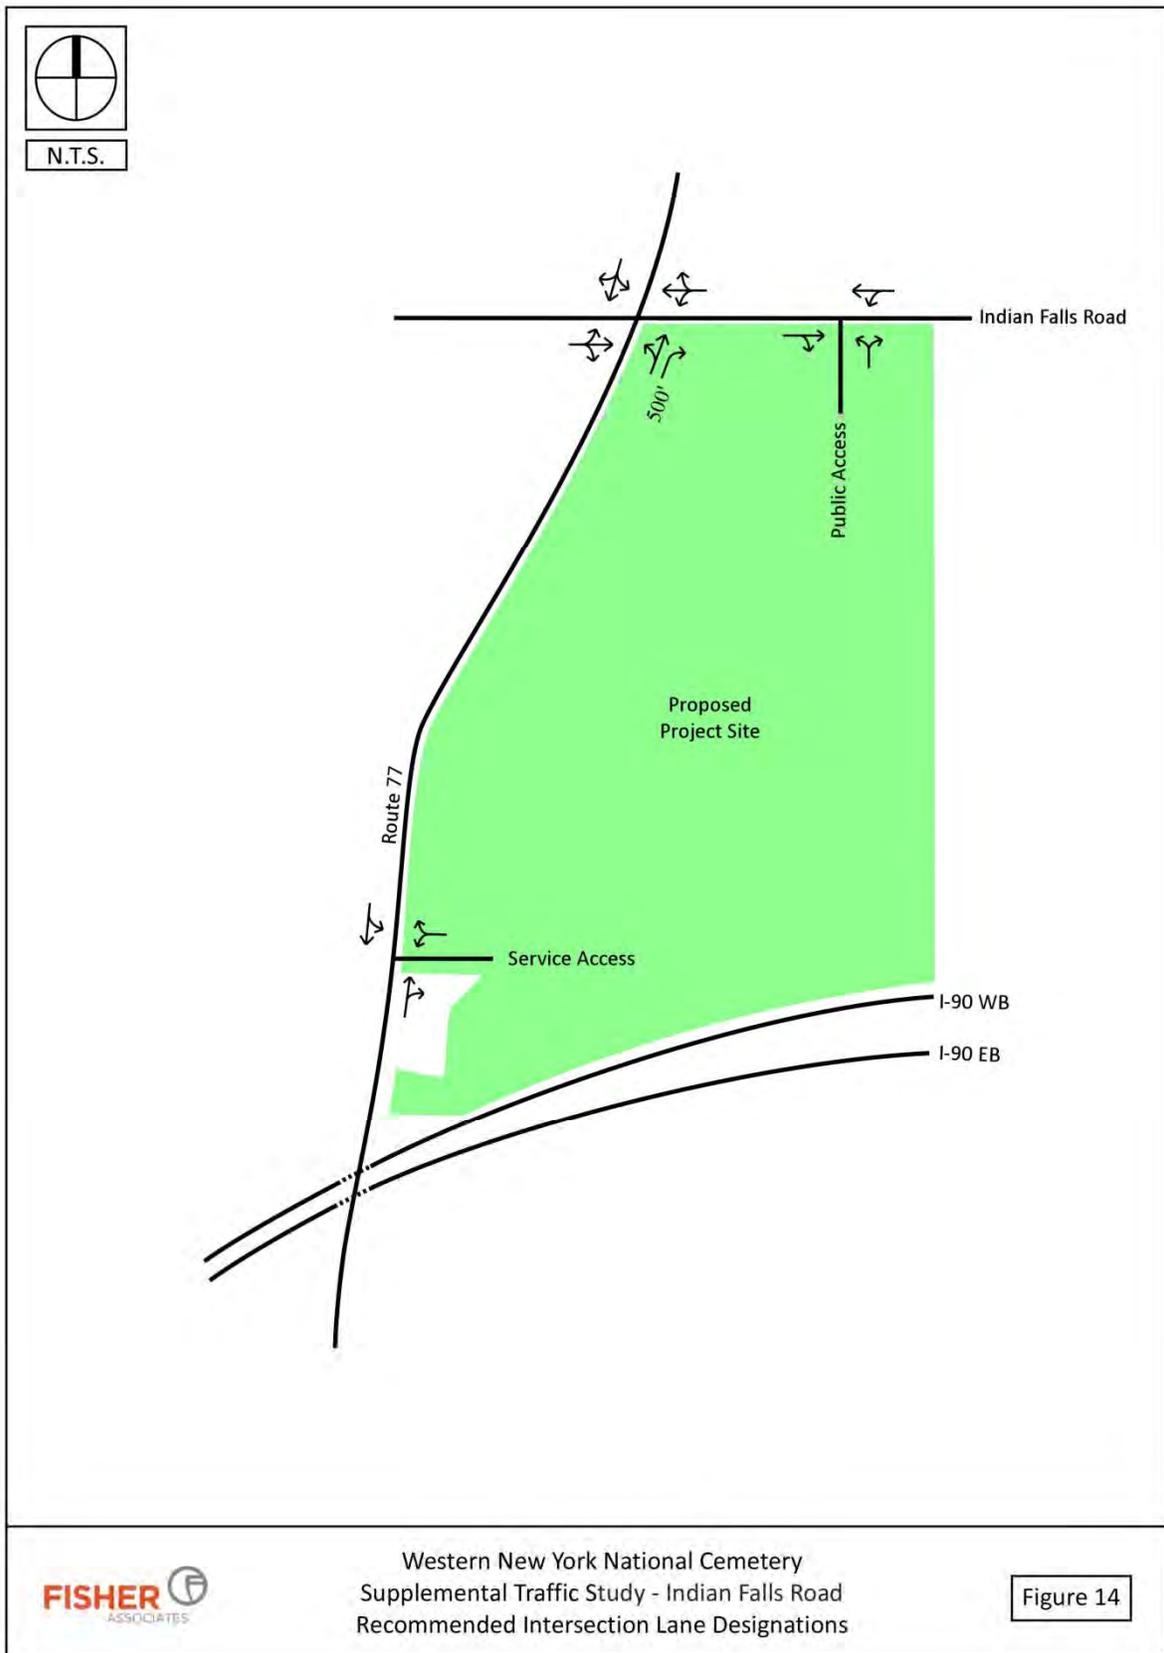

Given the higher travel speeds on Route 77 coupled with the predominant driver types connected with the Cemetery (older, unfamiliar with the area, and potentially preoccupied by their visit), it is recommended that a northbound right turn lane be provided at the Route 77/Indian Falls Road intersection to reduce the potential for accidents.

The southbound approach only minimally meets the thresholds for a left turn lane. Since it only minimally meets the thresholds for a left turn lane others factors were reviewed to determine if a southbound left turn lane is recommended. The review determined that there are minimal vehicles destined for the cemetery on this approach and the results of the operational analysis indicate that a southbound left turn lane is not needed. Therefore, it is recommended that a southbound left turn lane not be implemented at the Route 77/Indian Falls Road intersection.

For the recommended northbound right turn lane at the Route 77/Indian Falls Road intersection, a review of ASSHTO's Policy on Geometric Design of Highway's and Streets³ as well as Chapter Five from the NYSDOT Highway Design Manual⁵ noted the desirable full deceleration length is 605 feet for a roadway travel speed of 60 MPH. If it is assumed that traffic entering the turn lane has already begun its deceleration by 10 MPH, then the desirable full deceleration length is 425 feet for a roadway travel speed of 50 MPH. These full deceleration lengths are in addition to vehicle storage lengths based on potential vehicle queuing. Since the operational capacity analysis for the Route 77/Indian Falls Road intersection did not predict the need for turn lanes to satisfy a capacity constraint, a nominal vehicle queue length of two passenger cars was assumed. This queue length was then correlated to a lane storage length of approximately 75' on the northbound approach to the Route 77/Indian Falls Road intersection. **Figure 14** presents the recommended lane designations for the study intersections.

These turn lane geometries are provided for guidance purposes. It is recommended, as part of the detailed design process, that the turn lane geometries be refined to identify a best-fit turn lane geometric to account for the physical constraints of the roadway network and desirable conditions to accommodate the Cemetery's functions and activities.

Supplemental Traffic Study – Indian Falls Road

Western New York National Cemetery
Supplemental Traffic Study - Indian Falls Road
Recommended Intersection Lane Designations

Figure 14

**Western New York National Cemetery
Supplemental Traffic Study – Indian Falls Road**

Future Conditions capacity analysis was conducted with the implementation of the northbound right turn lane at the Route 77/Indian Falls Road intersection. Results of the capacity analysis indicate that all movements within the study intersections are expected to operate at a Level of Service 'c' or better during both analysis hours. Capacity analysis summary reports for the turn lane evaluation are provided in the **Appendix** of this report. **Table 2** summarizes the results of the capacity analysis.

VI. Conclusions

In Summary, the following transportation related conclusions, recommendations and considerations are provided to accommodate the public access point on Indian Falls Road for the Western New York National Cemetery:

- The proposed public access point on Indian Falls Road is acceptably located within the 195 feet public access zone and the observed sight distances were greater than desired intersection and stopping sight distances criterion.
- Acceptable levels of service are predicted for the public access point with the Cemetery approach being stop sign controlled with one lane exiting and one lane entering and no auxiliary turn lanes on the mainline approaches.
- It is recommended a northbound right turn lane be provided at the Route 77/Indian Falls Road intersection to provide a deceleration lane and reduce the potential for accidents. As part of the detailed design process, the turn lane geometries should be refined to identify a best-fit turn lane geometric to account for the physical constraints of the roadway network and desirable conditions to accommodate the Cemetery's functions and activities.

Attention: Mr. Edward G. Bennan II, Director

Re: General Site Assessment and Geotechnical Evaluation Report for
Proposed Veterans Affairs Cemetery
Indian Falls Road (Schmigel Parcel)
Town of Pembroke, Genesee County, New York

Dear Mr. Bennan:

Empire Geo-Services, Inc. (Empire) is pleased to submit an electronic PDF version of this General Site Assessment and Geotechnical Evaluation Report to Public Properties, on behalf of Veterans National Affairs, for the above referenced project. A pdf file copy of the report has been e-mailed to you and included on a DVD, for your use and distribution, as appropriate.

As the development of the proposed project site evolves, there will likely be additional issues, which Empire may need to address. Accordingly, please contact me, should you have any questions regarding our report or if you would like to discuss any design limitations and issues.

Sincerely,

EMPIRE GEO-SERVICES, INC.

Wanda M. Allen, P.E.
Geotechnical Engineer

1.00 INTRODUCTION

1.10 GENERAL

This report presents a summary of the subsurface exploration program and geotechnical engineering evaluation, completed by Empire Geo-Services, Inc. (Empire), for the proposed Veterans Affairs National Cemetery (VA Cemetery) project site planned off of Indian Falls Road (Schmigel Parcel) in Pembroke, New York. The approximate location of the project site is shown on Figure 1.

Public Properties retained Empire to complete the subsurface exploration program and provide a general site assessment and geotechnical evaluation report for the proposed project. This work was completed in general accordance with our August 29, 2014 proposal.

The subsurface exploration program consisted of the following, which serves as a basis for our geotechnical evaluation and considerations presented herein:

- Completion of test borings at twenty (20) locations (designated as B-1 through B-20) throughout the 70 acre parcel of land;
- Installation of groundwater observation wells within two (2) of the completed test borings (i.e. at boring locations B-3 and B-16);
- Measuring and recording the groundwater levels in the observation wells on two occasions during our study; and
- Completion of seven (7) test pits to further assess the soil and groundwater conditions present.

SJB Services, Inc. (SJB), our affiliated drilling and testing company completed the test borings, installed the groundwater observation wells and excavated the test pits.

Based on the findings from the exploration program, Empire prepared this report, which summarizes the subsurface conditions encountered, and presents geotechnical considerations to assist in the assessment of the site for use as a cemetery.

1.20 SITE DESCRIPTION

The proposed VA Cemetery project site is planned on an approximate 70 acre parcel of land, located off the south side of Indian Falls Road (County Road 4), north of Interstate 90, in Pembroke, Genesee County, New York. The site consists generally of agricultural fields and heavily wooded areas.

The topography of the site appears to be relatively level, based on the ground surface elevations obtained at the test boring and test pit locations, which vary from about El. 93.7 feet to El. 103.1 feet. The ground surface elevations obtained at the exploration locations were referenced to an arbitrary benchmark, established by SJB, as summarized further below.

1.30 PROJECT DESCRIPTION

The proposed VA Cemetery project is in the preliminary phase, and a proposed development plan had not been established at the time of our geotechnical investigation. Accordingly, this geotechnical investigation was completed to provide a general site assessment of the proposed property to determine possible subsurface issues and feasibility with regard to development of a cemetery on the parcel.

Generally, it is expected that development of the cemetery will include construction of mausoleums, maintenance building(s), monuments, roadways, sidewalks, underground crypts and underground double depth burial lots. Significant site grade changes are not anticipated, and are likely to be minimized to limit cost(s) for development of the cemetery.

2.00 SUBSURFACE EXPLORATION PROGRAM

The subsurface exploration program was completed by SJB between October 7th and 14th, 2015. The subsurface exploration program consisted of performing test borings at twenty (20) locations, test pits at seven (7) locations and the installation of two (2) groundwater observation wells. The test boring locations are designated as B-1 through B-20 and the groundwater observation wells are identified by the test borings in which they were installed (i.e. observation wells B-3 and B-16). The test pits are designated as TP-1 through TP-7.

The test boring and test pit locations were established on a site plan by Empire, to provide general coverage of the project site. SJB then staked the exploration locations in the field using hand held global positioning instrumentation. The

approximate exploration and groundwater observation well locations are shown on Figure 2.

Laser survey level techniques were utilized to determine the relative ground surface elevation at the test boring and test pit locations. The ground surface elevations were referenced to the top of the existing survey pin (benchmark), located near the existing cemetery. The benchmark was assigned an arbitrary elevation datum of 100.00 feet by SJB. The approximate location of the benchmark is shown on Figure 2.

The test borings were made using a Diedrich model D-50 all terrain rubber track mounted drill rig, using hollow stem auger and split spoon sampling techniques. All the test borings were advanced to a depth of 12.0 feet. Split spoon samples and Standard Penetration Tests (SPTs) were taken continuously from the ground surface until sample spoon refusal was met at a depth of 10.3 feet (B-2) or to boring completion. The split spoon sampling and SPTs were completed in general accordance with *ASTM D 1586 - "Standard Test Method for Penetration Test and Split-Barrel Sampling of Soils"*.

The groundwater observation wells installed in test borings B-3 and B-16 consisted of a 2-inch diameter PVC well screen and riser pipe with a sand filter, bentonite seal and soil backfill. The well riser pipes extend about 3.1 feet to 2.7 feet above the existing ground surface at the boring locations. Additional details regarding the construction of the observation wells are shown on the Monitoring Well Completion Records presented following their respective test boring logs in Appendix A.

A Geologist from SJB prepared the test boring logs based on visual observations of the recovered soil samples, along with review of the driller's field notes. The soil samples were described based on a visual/manual estimation of the grain size distribution, along with characteristics such as color, relative density, consistency, moisture, etc. The test boring logs are presented in Appendix A, along with general information and a key of terms and symbols used to prepare the logs.

The test pits were excavated using a Ford 555E rubber tire mounted backhoe. The test pit conditions were observed, photographed and logged by a representative of SJB. The test pit logs are included in Appendix B. Photographs of the general conditions encountered in the test pits are included in Appendix C.

3.00 SUBSURFACE CONDITIONS

3.10 GENERAL

The general soil stratigraphy encountered by the test borings and test pits consisted of surface topsoil, fill soils and/or indigenous silty clay, clayey silt, silt, sand and gravel soil deposits overlying apparent Limestone bedrock. The soil stratigraphy encountered and the groundwater conditions observed are described in more detail in the following sections and on the test boring logs in Appendix A and the test pit logs in Appendix B.

3.20 SURFACE MATERIALS

SJB's driller or geologist noted topsoil at the ground surface of test borings B-1, B-2, B-3, B-6, B-11, B-12 and B-14 through B-20. The topsoil thickness varied from about 6 to 14-inches. It is noted that the topsoil measurements are widely spaced and are approximate, as the data is limited and subject to interpretation.

In addition, the upper near surface indigenous soils have been disturbed in many cases due to past agricultural uses of the site. Trace to little amounts of organics was noted within the surface soils at varying boring and test pit locations across the site. Stripping of the site beyond the surface topsoil layer may be necessary in some areas to remove these organics, as well as tree stumps, root matter and the organic indigenous soils. Therefore this information should not be solely relied on for estimating topsoil quantities present on the site, which may be required to be removed for building, roadway and sidewalk construction. Accordingly, it will be necessary for the Contractor, and/or others, to make their own detailed observations and measurements, prior to bidding and construction, to determine the quantities, costs and efforts that will be required for removal of the topsoil, organics and roots and any associated replacement with an appropriate suitable fill materials.

Fill and/or reworked indigenous soils were present at the ground surface or beneath the topsoil at exploration locations, B-1 through B-5, B-8, B-11, B-14, TP-1 through TP-3, TP-5 and TP-6. The fill consisted generally of silty clay, clayey silt and/or fine sand soils with trace to little amounts of gravel and organics. The fill was found to typically extend to a depth about 2 feet below existing site grades. However, at test boring location B-11, the fill was found to extend to a depth of about 4 feet.

It is noted that the exploration locations at which the fill soils were present are located within the existing agricultural fields. Accordingly, it is most likely, the fill soils are reworked/disturbed indigenous soil deposits which occurred during the farming activities. It should be expected that the nature and depth of the fill and

reworked indigenous soils will vary between and away from the boring locations and can vary on the extent to which the site has been previously disturbed.

3.30 INDIGENOUS SOILS

The indigenous soils encountered at the test boring and test pit locations consisted predominately of intermixed silty clay, clayey silt, silt and fine sand soil deposits with varying amounts of gravel and cobbles/boulders. Gravel with varying amounts of clayey silt, silt and sand were also present at varying depths at test boring locations B-1, B-2, B-7, B-11, B-12, B-15 and B-18. These indigenous soils vary in composition between CL, ML, SC, SM-SC, SM, SP, GM-GC, GP and GW-GP group soils using the Unified Soil Classification System (USCS).

The Standard Penetration Test (SPT) “N” values obtained within the indigenous soil deposits at the test boring locations ranged from 4 to greater than 50, indicating the cohesive silty clay and clayey silt soils have a variable consistency ranging from “medium” to “hard”, while the generally more granular low to non-plastic silt, sand and gravel soils have a variable relative density ranging from “loose” to “very compact”. The softer and looser indigenous soils were generally encountered within the upper 2 to 6 feet.

Sample spoon refusal (“REF” – greater than 50 blows required to advance the split spoon with 6-inches or less of penetration) was encountered at borings B-2, B-3 and B-13, generally below a depth of about 4 to 6 feet. The spoon refusal indicates a very compact relative density or hard consistency of these soil deposits. However, cobble and boulder fragments present within the soil deposits will generally increase the SPT “N” values. In addition, at test boring locations B-9, B-10 and B-12, the driller noted a possible cobble/boulder obstruction below a depth of about 6 feet, 10 feet and 4 feet, respectively, although spoon refusal was not encountered.

An occasional cobble and/or boulder was also noted at all the test pit locations at varying depths. Accordingly, cobbles and boulders should be expected to be encountered at varying locations and depths throughout the proposed project site.

3.40 REFUSAL CONDITIONS/APPARENT BEDROCK

At test boring location B-2, gray limestone rock fragments were recovered within the final split spoon sample obtained between depths of 10.0 feet and 10.3 feet.

The driller was able to advance the test boring, using hollow stem auger techniques, to a depth of 12 feet below the existing ground surface, where the test boring was then terminated. The limestone rock fragments suggests encountering the top of bedrock, however, it is possible the fragments were the result of encountering a large cobble or boulder.

At test pit location TP-1, the excavation was unable to extend any deeper than a depth of 6.5 feet below the existing ground surface. Based on the conditions observed (i.e. generally level and continuous surface), it appears the top of bedrock was encountered at this depth.

The limestone rock fragments and apparent top of bedrock, as identified by SJB's geologist, was not encountered at the remaining test borings or test pit locations. Accordingly, it appears, bedrock, where present within the depths explored, is limited to the far northern portion of the project site. Refer to Figure 2 for the approximate locations of boring B-2 and test pit TP-1.

3.50 GROUNDWATER CONDITIONS

Water level measurements were made in the test borings at the completion of overburden drilling and sampling and are noted on the test boring logs included in Appendix A. Freestanding water was measured at depths of about 11.2 feet, 7.9 feet, 5.3 feet, 7.1 feet, 6.3 feet, 8.1 feet and 6.7 feet at test boring locations B-5, B-12, B-14, B-15, B-17, B-18 and B-20, respectively. At the remaining test boring locations, freestanding water was not encountered immediately following the completion of drilling operations. In addition, freestanding water was not encountered at any of the test pit locations following the completion of excavation. It is noted however, at test pit locations, TP-3 and TP-6, groundwater seepage was noted at or near the bottom of the excavation.

In both cases, given the predominately fine grained nature of the soil samples recovered, sufficient time for the groundwater to accumulate and/or stabilize in the test boring holes or test pit excavations within the time that had elapsed from the completion of drilling operations or the excavations and the time of measurement was likely not provided prior to the groundwater level observations / measurements.

Groundwater observation wells were installed in completed test borings B-3 and B-16 to better assess the approximate static groundwater level. A representative of SJB visited the site to record the water level in the wells on two occasions, November 10th and 12th, 2015.

On both dates, the well was dry at test boring location B-3. On November 10th, 2015, the groundwater level was at a depth of about 6.1 feet, below the existing ground surface at test boring location B-16. SJB then bailed the well dry following the groundwater level measurement. On November 12th, 2015, the groundwater was present at a depth of about 5.7 feet below the existing ground surface. Accordingly, the groundwater fully recovered within the time that had elapsed following bailing of the well.

Based on the groundwater level measurements obtained within the ground observation wells, as well as the observations within the test borings and test pits, it appears saturated soil conditions (i.e. groundwater table) are within a depth of about 5 to 6 feet within the central to southern portion of the project site.

Although not readily observed at the test boring and test pit locations, it is possible that some localized zones of perched or trapped groundwater could be present in the more pervious fill and indigenous soils, which overlie less permeable soils. Perched groundwater conditions can be particularly prevalent following heavy or extended periods of precipitation and during seasonally wet periods.

It should be expected that groundwater conditions will vary with changes in soil conditions, precipitation and seasonal conditions and can be influenced by fluctuations in the level of the nearby Tonawanda Creek.

4.00 PRELIMINARY GEOTECHNICAL CONSIDERATIONS

4.10 GENERAL GEOTECHNICAL CONSIDERATIONS

The presence of variable soil conditions and the high groundwater conditions may make development of the site difficult, especially for underground structures. It appears, the northern portion of the site may be more suitable for placement of underground crypts and burial plots. However, because of the shallow groundwater conditions, without raising the current site grades, development of the remaining portions of the site for use as cemetery burial plots may not be conducive.

Excavations to prepare bearing grades, construct foundations, install underground utilities, construct underground crypts and burial plots are expected to encounter varying amounts of groundwater depending on location and surrounding soil type. The relatively free draining sand and gravel type soils are expected to yield more significant quantities of groundwater. These soils along with the non-plastic silt soil deposits can undergo rapid excavation bottom and sidewall instability, if not properly dewatered in advance of excavation. Groundwater seepage through the

lower permeability silty clay and clayey silt soils is expected to be relatively minor and substantially less, compared to the sand and gravel soils.

Based on the conditions encountered at the test boring and test pit locations, it appears the soils consisted predominately of silty clay and clayey silt soil deposits. At all the test pit locations, the excavation sidewalls were generally stable. However, the test pit excavations were backfilled immediately following excavation of the test pit and did not remain open for an extended period of time. Water did begin to seep into the excavations, at a couple locations, and therefore, it is expected that the silty clay and clayey silt subgrades may also degrade over time as excavations are made into these soils, below groundwater conditions.

In the central to southern portion of the project site, it appears groundwater is within a depth of 5 feet to 6 feet below existing site grades. Therefore, it appears that more extensive dewatering could be required to perform earthwork, foundation and utility construction, and excavations for crypts and burial plots under relatively dry conditions, where excavations extend below the groundwater. It is expected that site dewatering may require the use of groundwater cut-off trenches, groundwater barriers and deep sumps/well points operating on a continuous basis to control groundwater, depending on the groundwater conditions at the time of construction and location on site. The raising of site grades and the time of year construction proceeds may help reduce the amount of dewatering required. The final site grading design, including storm/surface water drainage should consider the relatively shallow groundwater conditions present and the potential impacts of nearby Tonawanda Creek.

A temporary shoring (trench box, etc.) may also be necessary to maintain open excavations, where loose silt, sand and gravel soil deposits are present. In addition, the excavation effort may become difficult due to the very compact and hard indigenous soils encountered at varying locations on the site, including the amount of cobbles and boulders present. In most cases, the cobbles and boulders were able to be removed with the small tractor backhoe (Ford 555E), however, at test pit locations TP-2, TP-4 and TP-5, the boulder(s) below depths varying from 2.5 feet and 11.0 feet were not able to be removed and were not rippable. It is possible the boulders would be able to be removed with a large size excavator. In either case, the excavation effort is expected to become generally more difficult with depth.

In addition to the cobbles and boulders, it appears Limestone bedrock was encountered at test boring location B-2 at a depth of about 10.0 feet below the existing ground surface. At test pit location, TP-2, it appears the Limestone bedrock was encountered at a depth of about 6.5 feet. The excavation was unable

to extend beyond 6.5 feet due to the apparent top of bedrock. Accordingly, the apparent bedrock is not considered to be a rippable material. Therefore, the use of pneumatic or hydraulic breaker or rock grinder, may likely be necessary to loosen the material for excavations which encounter bedrock.

It is also noted that the upper soil conditions are generally loose or of a medium consistency. Although standing water was not readily apparent across the project site, at the time of our investigation, SJB's geologist noted that the upper soil conditions, predominately on the southern portion of the site, was soft and generally moist-wet, similar to the conditions of a low lying swampy wet area. Therefore, site development and construction of the access roadways, sidewalks, etc. will also be difficult without special subgrade preparation procedures. Accordingly, raising the site grades may be necessary in some areas in order to construct roadways, sidewalks, etc., as well as for construction of any building structures and monuments, and for general landscaping. Following stripping of the site, the placement of oversized stone fill material encased in stabilization geotextile top and bottom, may be necessary in some areas to help stabilize the subgrades prior to the subgrade fill placement, particularly if the existing subgrades are in a soft/wet condition.

In general, it appears the northern portion of the site would be suitable for use of cemetery with limited site improvements. However, site improvements, including re-grading the project site and implementation of storm and surface water drainage appear will be necessary for the remaining portions of the site for development.

We are available to discuss the site conditions and site development limitations, as Public Properties along with the Department of Veterans Affairs, proceeds with the feasibility study. If development of the site does proceed, it is recommended the involved parties have a clear understanding of the site limitations, potential construction problems, risks and costs.

4.20 SEISMIC DESIGN CONSIDERATIONS

Based on the subsurface conditions encountered, the upper 100 feet of the project site can be preliminarily classified as Seismic Site Class "D" in accordance with Table 1613.5.2 of the Building Code of New York State - December 2010 (NYS Building Code). It is possible that the seismic site class could be upgraded, which will be dependent upon the actual depth to bedrock. Accordingly, additional explorations, in the proposed building area(s), would be necessary to determine the actual depth and quality of the bedrock.

The spectral response accelerations in the project area were obtained by Empire using the United States Geological Survey (USGS) web site application (<http://earthquake.usgs.gov/designmaps/us/application.php>). The accelerations are based on the 2009 NEHRP Recommended Seismic Provisions, which makes use of the 2008 USGS seismic hazard data. The acceleration values obtained from this application were then adjusted, as recommended by the USGS, to obtain the 2% probability in 50 years mapping accelerations, as presented in the NYS Building Code.

Using the site location, the calculated spectral response accelerations for Site Class “B” soils are 0.217g for the short period (0.2 second) response (S_S) and 0.052g for the one second response (S_1). For design purposes, these spectral response accelerations were then adjusted for Seismic Site Class “D”, preliminarily recommended for the project site.

Accordingly, the adjusted spectral response accelerations for Seismic Site Class “D” are as follows:

- Short Period Response (S_{MS}) - 0.347g
- 1 Second Period Response (S_{M1}) – 0.125

The corresponding five percent damped design spectral response accelerations (S_{DS} and S_{D1}) are as follows:

- S_{DS} - 0.231g
- S_{D1} - 0.083g

5.00 CONCLUDING REMARKS

This report was prepared to assist in the site assessment and development of the proposed Veterans Affairs National Cemetery project planned off of Indian Falls Road (Schmigel Parcel) in the Town of Pembroke, New York. The report has been prepared for the exclusive use of Public Properties and members of the design team, for specific application to this site and this project only.

The recommendations were prepared based on Empire Geo-Services, Inc.’s understanding of the proposed project, as described herein, and through the application of generally accepted soil and foundation engineering practices. No

warranties, expressed or implied are made by the conclusions, opinions, recommendations or services provided.

Additional information regarding the use and interpretation of this report is presented in Appendix D.

Sincerely,

EMPIRE GEO-SERVICES, INC.

SUBSURFACE EXPLORATION PLAN		

APPENDIX A
TEST BORING LOGS

GENERAL INFORMATION & KEY TO SUBSURFACE LOGS

The Subsurface Logs attached to this report present the observations and mechanical data collected by the driller at the site, supplemented by classification of the material removed from the borings as determined through visual identification by technicians in the laboratory. It is cautioned that the materials removed from the borings represent only a fraction of the total volume of the deposits at the site and may not necessarily be representative of the subsurface condition between adjacent borings or between the sampled intervals. The data presented of the Subsurface Logs together with the recovered samples provide a basis for evaluating the character of the subsurface conditions relative to the project. The evaluation must consider all the recorded details and their procedures to more accurately evaluate the subsurface conditions. Any evaluation of the contents of this report and recovered samples must be performed by qualified professionals. The following information defines some of the procedures and terms used of the Subsurface Logs to describe the conditions encountered, consistent with the numbered identifiers shown on the Key opposite this page.

1. The figures in the Depth column define the scale of the Subsurface Log.
2. The Samples column shows, graphically, the depth range from which a sample was recovered. See Table I for descriptions of the symbols used to represent the various types of samples.
3. The Sample No. is used for identification on sample containers and/or Laboratory Test Reports.
4. Blows on Sampler – shows the results of the “Penetration Test”, recording the number of blows required to drive a split spoon sampler into the soil. The number of blows required for each six inches is recorded. The first 6 inches of penetration is considered a seating drive. The number of blows required for the second and third 6 inches of penetration is termed the penetration resistance, N.
5. Blows on Casing – Shows the number of blows required to advance the casing a distance of 12 inches. The casing size, hammer weight, and length of drop are noted at the bottom of the Subsurface Log. If the casing is advanced by means other than driving, the method of advancement will be indicated in the Notes column or under the Method of Investigation at the bottom of the Subsurface Log. Alternatively, sample recovery may be shown in this column or other data consistent with the column heading.
6. All recovered soil samples are reviewed in the laboratory by an engineering technician, geologist, or geotechnical engineer, unless noted otherwise. Visual descriptions are made on the basis of a combination of the driller’s field descriptions and noted observations together with the sample as received in the laboratory. The method of visual classification is based primarily on the Unified Soil Classification System (ASTM D 2487) with regard to the particle size and plasticity (See Table No. II), and the Unified Soil Classification System group symbols for the soil types are sometimes included with the soil classification. Additionally, the relative portion, by weight, of two or more soil types is described for granular soils in accordance with “Suggested Methods of Test for Identification of Soils” by D.M. Burmister, ASTM Special Technical Publication 479, June 1970. (See Table No. III). Description of the relative soil density or consistency is based upon the penetration records as defined in Table No. IV. The description of the soil moisture is based upon the relative wetness of the soil as recovered and is described as dry, moist, wet, and saturated. Water introduced into the boring either naturally or during drilling may have affected the moisture condition of the recovered sample. Special terms are used as required to describe soil deposition in greater detail; several such terms are listed in Table V. When sampling gravelly soils with a standard two inch diameter split spoon, the true percentage of gravel is often not recovered due to the relatively small sampler diameter. The presence of boulders and large gravel is sometimes, but not necessarily, detected by an evaluation of the casing and sampler blows or through the “action” of the drill rig as reported by the driller.
7. Rock description is based on review of the recovered rock core and the driller’s notes. Frequently used rock classification terms are included in Table VI.
8. The stratification lines represent the approximate boundary between soil types and the transition may be gradual. Solid stratification lines delineate apparent changes in soil type, based upon review of recovered soil samples and the driller’s notes. Dashed lines convey a lesser degree of certainty with respect to either a change in soil type or where such change may occur.
9. Miscellaneous observations and procedures noted by the driller are shown in this column, including water level observations. It is important to realize the reliability of the water level observations depends upon the soil type (water does not readily stabilize in a hole through fine grained soils), and that any drill water used to advance the boring may have influenced the observations. The ground water level will fluctuate seasonally, typically. One or more perched or trapped water levels may exist in the ground seasonally. All the available readings should be evaluated. If definite conclusions cannot be made, it is often prudent to examine the conditions more thoroughly through test pit excavations or groundwater observation wells.
10. The length of core run is defined as the length of penetration of the core barrel. Core recovery is the length of core recovered divided by the core run. The RQD (Rock Quality Designation) is the total length of pieces of NX core exceeding 4 inches divided by the core run. The size core barrel used is also noted in the Method of Investigation at the bottom of the Subsurface Log.

0								3" TOPSOIL	Groundwater at 10' upon completion, and 5' 24 hrs. after completion	
	1	3	3	4	8	7	10	Brown SILT, some Sand, trace clay, ML (Moist-Loose)		
							15			
							50/5			
5								Gray SHALE, medium hard, weathered, thin bedded, some fractures	Run#1, 2.5'-5.0' 95% Recovery 50% RQD	

TABLE I

	Split Spoon Sample
	Shelby Tube Sample
	Geoprobe Macro-Core
	Auger or Test Pit Sample
	Rock Core

TABLE II

Identification of soil type is made on basis of an estimate of particle sizes, and in the case of fine grained soils also on basis of plasticity.

Soil Type	Soil Particle Size	
Boulder	>12"	
Cobble	3" - 12"	
Gravel - Coarse	3" - 3/4"	Coarse Grained (Granular)
- Fine	3/4" - #4	
Sand - Coarse	#4 - #10	Fine Grained
- Medium	#10 - #40	
- Fine	#40 - #200	
Silt - Non Plastic (Granular)	<#200	
Clay - Plastic (Cohesive)		

TABLE III

The following terms are used in classifying soils consisting of mixtures of two or more soil types. The estimate is based on weight of total sample.

Term	Percent of Total Sample
"and"	35 - 50
"some"	20 - 35
"little"	10 - 20
"trace"	less than 10

(When sampling gravelly soils with a standard split spoon, the true percentage of gravel is often not recovered due to the relatively small sampler diameter.)

TABLE IV

The relative compactness or consistency is described in accordance with the following terms:

Granular Soils		Cohesive Soils	
Term	Blows per Foot, N	Term	Blows per Foot, N
Loose	0 - 4	Very Soft	0 - 2
Loose	4 - 10	Soft	2 - 4
Firm	10 - 30	Medium	4 - 8
Compact	30 - 50	Stiff	8 - 15
Very Compact	>50	Very Stiff	15 - 30
		Hard	>30

(Large particles in the soils will often significantly influence the blows per foot recorded during the penetration test)

TABLE V

Varved	Horizontal uniform layers or seams of soil(s).
Layer	Soil deposit more than 6" thick.
Seam	Soil deposit less than 6" thick.
Parting	Soil deposit less than 1/8" thick.
Laminated	Irregular, horizontal and angled seams and partings of soil(s).

TABLE VI

Rock Classification Term	Meaning	Rock Classification Term	Meaning
Hardness	- Soft	Bedding	- Laminated (<1")
	- Medium Hard		- Thin Bedded (1" - 4")
	- Hard		- Bedded (4" - 12")
	- Very Hard		- Thick Bedded (12" - 36")
Weathering	- Very Weathered	- Massive (>36")	
	- Weathered		
	- Sound		

(Fracturing refers to natural breaks in the rock oriented at some angle to the rock layers)

APPENIDX D
REPORT LIMITATIONS

GEOTECHNICAL REPORT LIMITATIONS

Empire Geo-Services, Inc. (Empire) has endeavored to meet the generally accepted standard of care for the services completed, and in doing so is obliged to advise the geotechnical report user of our report limitations. Empire believes that providing information about the report preparation and limitations is essential to help the user reduce geotechnical-related delays, cost over-runs, and other problems that can develop during the design and construction process. Empire would be pleased to answer any questions regarding the following limitations and use of our report to assist the user in assessing risks and planning for site development and construction.

PROJECT SPECIFIC FACTORS: The conclusions and recommendations provided in our geotechnical report were prepared based on project specific factors described in the report, such as size, loading, and intended use of structures; general configuration of structures, roadways, and parking lots; existing and proposed site grading; and any other pertinent project information. Changes to the project details may alter the factors considered in development of the report conclusions and recommendations. *Accordingly, Empire cannot accept responsibility for problems which may develop if we are not consulted regarding any changes to the project specific factors that were assumed during the report preparation.*

SUBSURFACE CONDITIONS: The site exploration investigated subsurface conditions only at discrete test locations. Empire has used judgement to infer subsurface conditions between the discrete test locations, and on this basis the conclusions and recommendations in our geotechnical report were developed. It should be understood that the overall subsurface conditions inferred by Empire may vary from those revealed during construction, and these variations may impact on the assumptions made in developing the report conclusions and recommendations. *For this reason, Empire should be retained during construction to confirm that conditions are as expected, and to refine our conclusions and recommendations in the event that conditions are encountered that were not disclosed during the site exploration program.*

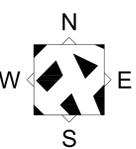

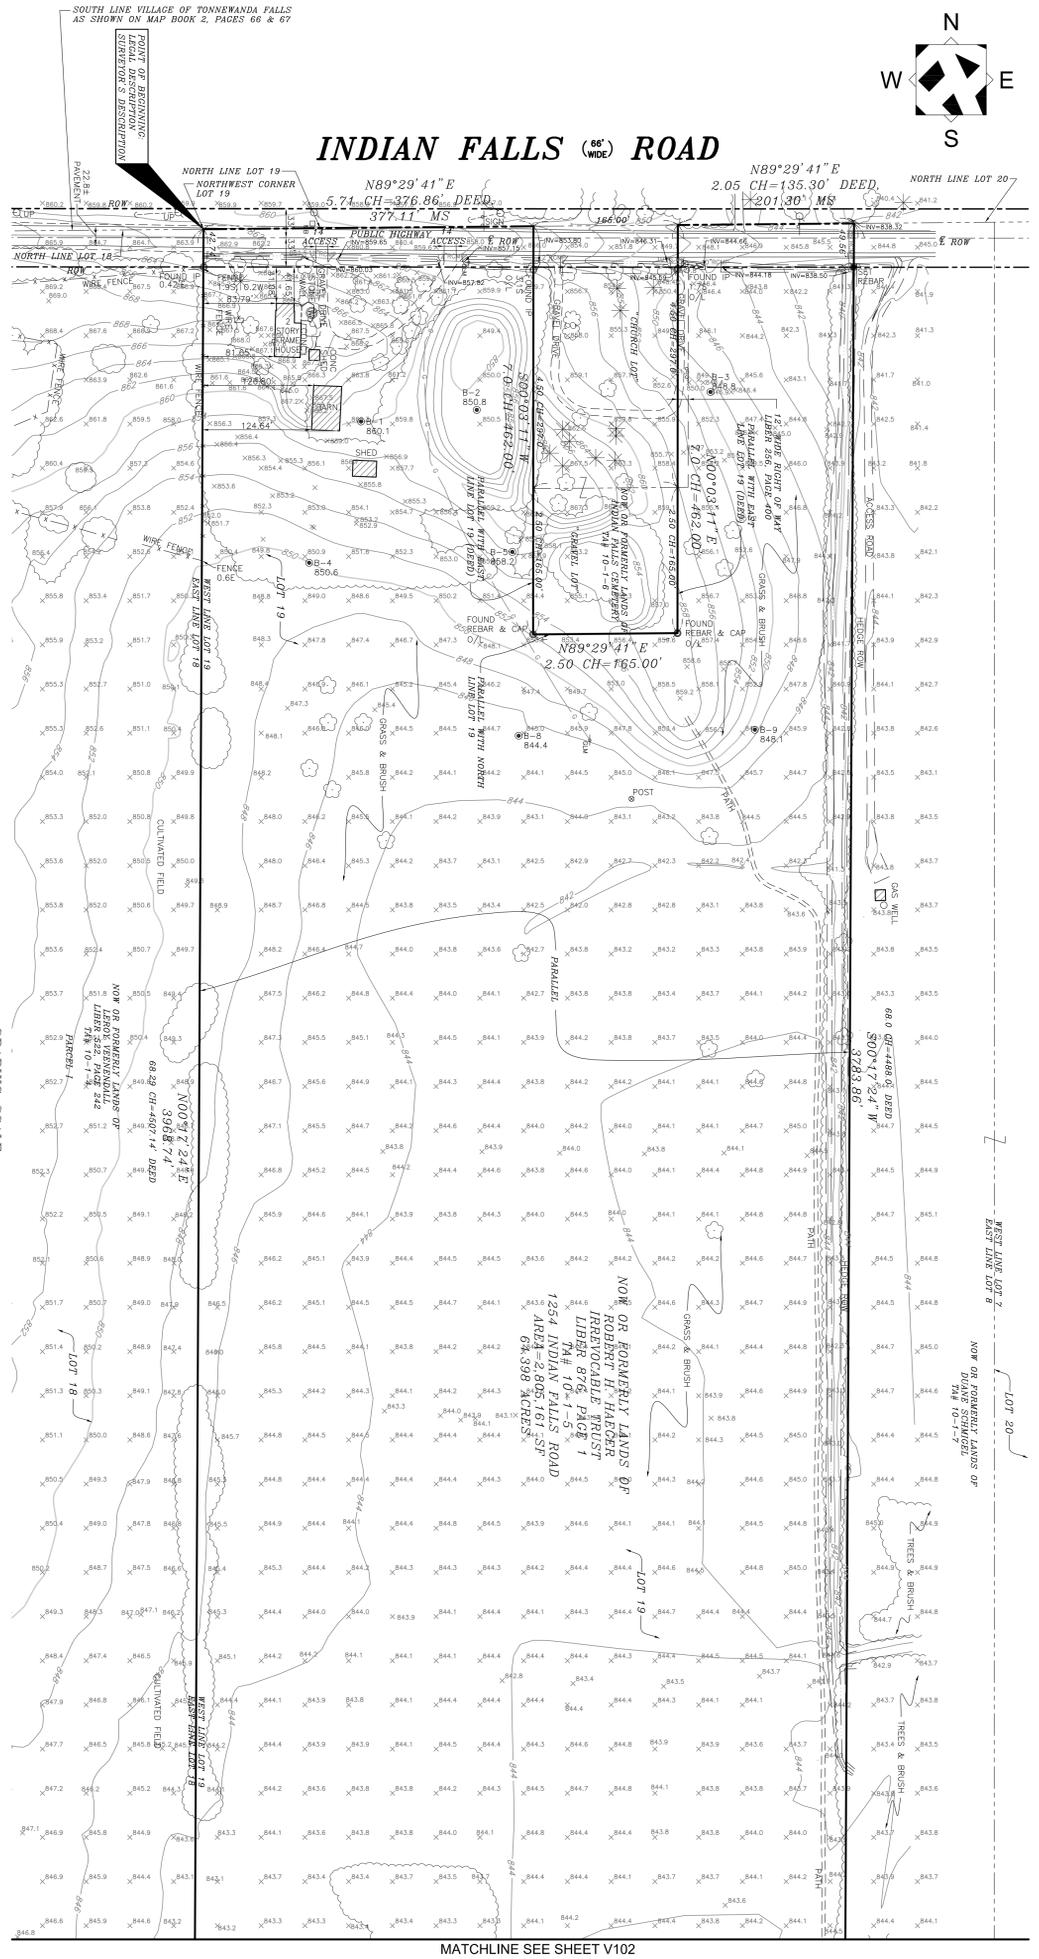

USE OF GEOTECHNICAL REPORT: Unless indicated otherwise, our geotechnical report has been prepared for the use of our client for specific application to the site and project conditions described in the report. *Without consulting with Empire, our geotechnical report should not be applied by any party to other sites or for any uses other than those originally intended.*

CHANGES IN SITE CONDITIONS: Surface and subsurface conditions are subject to change at a project site subsequent to preparation of the geotechnical report. Changes may include, but are not limited to, floods, earthquakes, groundwater fluctuations, and construction activities at the site and/or adjoining properties. *Empire should be informed of any such changes to determine if additional investigative and/or evaluation work is warranted.*

MISINTERPRETATION OF REPORT: The conclusions and recommendations contained in our geotechnical report are subject to misinterpretation. *To limit this possibility, Empire should review project plans and specifications relative to geotechnical issues to confirm that the recommendations contained in our report have been properly interpreted and applied.*

Subsurface exploration logs and other report data are also subject to misinterpretation by others if they are separated from the geotechnical report. This often occurs when copies of logs are given to contractors during the bid preparation process. *To minimize the potential for misinterpretation, the subsurface logs should not be separated from our geotechnical report and the use of excerpted or incomplete portions of the report should be avoided.*

OTHER LIMITATIONS: Geotechnical engineering is less exact than other design disciplines, as it is based partly on judgement and opinion. For this reason, our geotechnical report may include clauses that identify the limits of Empire's responsibility, or that may describe other limitations specific to a project. These clauses are intended to help all parties recognize their responsibilities and to assist them in assessing risks and decision making. Empire would be pleased to discuss these clauses and to answer any questions that may arise.

INDIAN FALLS (66' WIDE) ROAD

LEGAL DESCRIPTION (Liber 876, Page 1)

All lot center point, corner or point of land, with the building and improvements thereon, being distinguished as part of lots (8) and (19) in the Trust of land known and designated as the 12,800 acre Tract on the Tonawanda Reservation, bounded and described as follows:

COMMENCING at the southeast corner of said Lot 19 and running thence east in the center of a certain highway on the north side of said Lot 19, a distance of 377.11 feet to the northeast corner of said Lot 19, seven acres and 19/100 parts of an acre, more or less, contained in said Lot 19, as shown on a map on file in the Livingston County Clerk's Office and as further described in a deed from Earl R. Tuttle and Luelia Tuttle, husband and wife, to the County of Livingston by deed dated January 11, 1954, and recorded in said County Clerk's Office in Liber 327 of Deeds, of Page 575.

3) A parcel containing 2 and 37/100 of an acre, more or less, conveyed by Earl R. Tuttle and Luelia Tuttle, husband and wife, to Leo La Verdi and Adelaide La Verdi by deed dated July 31, 1958 and recorded in said County Clerk's Office on the same day in Liber 353 of Deeds, of Page 87.

EXCEPTION PARCEL DESCRIPTION (Liber 472, Page 142)

2) Parcel conveyed to the County of Livingston for the construction of Five Town Center-Route 36 highway as shown on a map on file in the Livingston County Clerk's Office and as further described in a deed from Earl R. Tuttle and Luelia Tuttle, husband and wife, to the County of Livingston by deed dated January 11, 1954, and recorded in said County Clerk's Office in Liber 327 of Deeds, of Page 575.

3) A parcel containing 2 and 37/100 of an acre, more or less, conveyed by Earl R. Tuttle and Luelia Tuttle, husband and wife, to Leo La Verdi and Adelaide La Verdi by deed dated July 31, 1958 and recorded in said County Clerk's Office on the same day in Liber 353 of Deeds, of Page 87.

SURVEYORS DESCRIPTION

All land TRACT OR PARCEL OR LAND situated in the town of Pembroke, County of Genesee, and State of New York, being part of Lots 8 and 19 of the 12,800 Acre Tract of the Tonawanda Reservation, Township 12, Range 4, bounded and described as follows:

COMMENCING at the northeast corner of Lot 19 of the 12,800 Acre Tract of the Tonawanda Reservation;

Thence N 89° 29' 41" E along the north line of said Lot 19, a distance of 377.11 feet to the northeast corner of the Indian Falls Cemetery;

Thence S 00° 03' 11" W along the west line of the said Indian Falls Cemetery, a distance of 482.00 feet to the southeast corner of the said Indian Falls Cemetery;

Thence N 89° 29' 41" E along the south line of the said Indian Falls Cemetery and parallel with the said north line of Lot 19, a distance of 168.00 feet to the southeast corner of the said Indian Falls Cemetery;

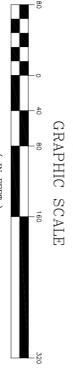

Thence N 00° 03' 11" E along the east line of the said Indian Falls Cemetery, a distance of 482.00 feet to the north line of said Lot 19;

Thence N89° 29' 41" E along the said north line of Lot 19, a distance of 201.30 feet to a point;

Thence S 00° 17' 24" W parallel with the west line of said Lot 19 and the west line of the 12,800 Acre Tract of the Tonawanda Reservation, a distance of 1,373.80 feet to the northeast corner of lands appropriated by the People of the State of New York, Map 49, Parcel 53 by deed recorded in the Genesee County Clerk's Office in Liber 201 of Deeds of the State of New York and the west line of said Lot 8;

Thence N 00° 17' 24" E along the said west line of Lots 8 and 19, a distance of 3,969.74 to the point or piece of beginning, containing 2,805,161 square feet or 64,398 acres of land more or less.

Bearings are referenced to True North at the 79° 35' meridian of west longitude.

GENERAL NOTES:

The survey for this map was completed on April 16, 2014.

The property location described is the same as the pertinent property as described in the Certificate and Report of Title issued by Chicago Title Insurance Company, dated April 11, 2014, on Title Number 14211798.

The underground utilities shown have been located from field survey and record information provided. The surveyor makes no guarantee that the underground utilities shown comprise all such utilities as they may exist. If record information available, the surveyor has not physically located the underground utilities. It is the client's responsibility to verify the location of all utilities (whether shown or not) and to protect said utilities from any damage.

The address post on the subject property is 1254 Indian Falls Road.

Access to the site is via Indian Falls Road, a public dedicated highway.

At the time of this survey there was no observable evidence of the site being used as a solid waste dump, swamp or sanitary landfill.

Conditions are referenced to the NAD 83 vertical datum.

Coordinates are referenced to the New York State Plane Coordinate System, West Zone, NAD 83.

Mapping comply by photogrammetric methods from aerial photography exposed 11/18/12 and field edited April 16, 2014.

BASIS OF BEARINGS:

Bearings are referenced to True North at the 79° 35' meridian of west longitude.

LAND AREA:

Square Feet: 2,805,161 square feet

ENCROACHMENT STATEMENT:

At the time of this survey there were no apparent encroachments on the subject property.

ZONING INFORMATION:

Not provided by the insurer.

PARKING SPACE INFORMATION:

None apply.

FLOOD STATEMENT:

By graphic plotting only, this property is in Zone C of the Flood Insurance Rate Map, Community No. 360283, Panel No. 0000-C, which bears an effective date of January 20, 1984 and is not in a special flood hazard zone. No field surveying was performed to determine this zone, and an elevation certificate may be needed to verify this determination or apply for a variance from the schedule B notes.

SCHEDULE B NOTES:

The Certificate and Report of Title issued by Chicago Title Insurance Company, dated April 11, 2014, on Title Number 14211798 contains the following exceptions which are survey matters:

3. Easement to Empire Telephone Corporation dated May 17, 1990 and recorded July 23, 1990 in Liber 583 of Deeds at Page 229. Affects premises, unable to graphically depict.

2.11 Noise

Assessment of existing sound levels was performed on April 27, 2015. Collection of data included recording the maximum (Lmax) and minimum (Lmin) sound levels within a 5 minute duration at 14 locations throughout the site. The sound levels were measured with a Quest Technologies 2200 Integrating Sound Level Meter equipped with a wind shield. Winds were generally 5 mph with gusts to 10 mph. As anticipated, sound levels were highest, approximately 72 dBA, in the southern end of the site adjacent to the NYS Thruway and lowest, approximately 50 dBA, in the middle portion of the site adjacent to the tree line.

See Figure 2.11.A, Sound Level Study Location Map.

EXECUTIVE SUMMARY

Great Lakes Environmental & Safety Consultants, Inc. (Great Lakes) has been retained by Public Properties to conduct a Phase I Environmental Site Assessment (ESA) and Limited Compliance Review in conformance with ASTM Standard E1527-13, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. The Schmigel property (Tax Map ID 10.-1-7), is located on Indian Falls Road, in Pembroke, County of Genesee, New York. The objective of this assessment is to determine the presence or absence of Recognized Environmental Conditions (RECs), as defined in ASTM Standard E1527-13. Any exceptions to or deletions from this practice are noted in this report.

The ESA was performed to advise Public Properties of potential environmental concerns associated with the subject property and its current and former uses and operations, if any. The subject site is currently owned by Duane Schmigel. The parcel is polygonal in shape and consists of approximately 77.1 acres.

Based on information reviewed for the subject site, the property currently does not hold any environmental liens, and there is no knowledge of any past or current violations, lawsuits, or administrative proceedings involving the subject property.

Due to the past land use of the subject site (i.e. farmland), it is recommended that a Phase II Environmental Site Assessment be conducted to verify the presence and the extent of subsurface contamination due to possible pesticide/herbicide application, if any.

Detailed results of the site assessment and applicable environmental observations are discussed in the body of this report.

1.0 INTRODUCTION AND BACKGROUND

Great Lakes Environmental & Safety Consultants, Inc. completed a Phase I Environmental Site Assessment (ESA) and Limited Compliance Review of the Schmigel property located on Indian Falls Road in Pembroke, New York. The subject property includes approximately 77.1 acre of farmland and wooded land. This Phase I Environmental Site Assessment was performed for Public Properties to provide technical assistance in anticipation of a potential property transaction.

Based on information reviewed for the subject site, no evidence was found indicating the property holds any environmental liens. There is no knowledge of any current violations, lawsuits, or administrative proceedings involving the subject property.

Great Lakes Personnel performed a site visit on October 26, 2015. Photographs of the site and surrounding areas were taken to document current conditions at the subject parcel and are included in Appendix A.

1.1 Scope of Work

This ESA was conducted in general conformance with the requirements of ASTM Standard E1527-13; Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process.

The assessment was conducted to evaluate the potential for environmental impacts on the subject parcel as a result of past or current activities on the property or surrounding properties. Great Lakes' Phase I Environmental Assessment included:

- An on-site inspection of the subject property to evaluate current conditions and to identify areas of potential concern;
- A review of property history through interviews and historical mapping;
- Observation of adjacent properties and the local area to evaluate the potential for adverse environmental impacts to the subject parcel;
- A review of regulatory agency records through the use of a contracted search of regulatory databases.

1.2 User Reliance

This report is for the use and benefit of, and may be relied upon by, Public Properties and any affiliates, and third parties authorized by Public Properties and Great Lakes.

The Environmental Professional hereby certifies that this Phase I ESA has been conducted in accordance with and conforms to ASTM E 1527-13 Standard, or the most current ASTM Standard, and the EPA Rules.

1.3 Limiting On-Site Conditions

The site visit was conducted on October 26, 2015. The local weather conditions, at the time of the site visit, were mostly sunny with temperatures in the mid 50° F range. The auditor's ability to observe the conditions of the site was not affected.

2.0 SITE SETTING

2.1 Location

The subject site is located on Indian Falls Road in Pembroke, New York, approximately ¼-mile southeast of the intersection of Indian Falls Road and Alleghany Road. The subject property includes approximately 77.1 acre of farmland and wooded land. The surrounding area is rural with a mix of farmland, wooded land and residential properties. Photographs taken during the site assessment are provided in Appendix A. Approximate subject property coordinates are as follows (coordinates given below represent an approximate central point for the site):

Latitude (North): 43° 1' 14.52"
Longitude (West): 78° 23' 54.24"

2.2 Neighboring Properties

As stated above, the current land use of the area immediately surrounding the site is rural and surrounding uses are primarily residential in nature. The features surrounding the subject parcels are described below.

North Directly to the north are residential properties, farmland and wooded land on the opposite side of Indian Falls Road.

South Interstate 90 borders the property to the south.

East A residence is located to the northeast of the subject site, with a mix of residential properties farmland and wooded land.

West Indian Falls Cemetery is located approximately 300 feet to the west, followed by a mix of wooded land, farmland and a residence.

2.3 Topography and Hydrology

The subject site is relatively flat with the site elevation at 862 feet above mean sea level (see the topographical maps in Appendix C). Groundwater flow direction in the area is anticipated to flow east-northeast. Surface water in the area percolates into surrounding soil, or evaporates. The nearest significant body of water is Murder Creek, which is located approximately ¼-mile to the south of the subject property. National wetlands are located within the property boundary. 100-year FEMA flood zones are located within a ¼-mile radius of the subject site.

2.4 Geology and Hydrogeology

The subject property is situated above Paleozoic-aged bedrock. The system unit is Devonian and the series unit is Middle Devonian. The code unit is D2. The site soil classification is Palmyra, which consists of gravelly loam. These soils are characterized as being well drained. These soils do not meet the requirements for a

Hydric soils are likely to be found on the site. The general direction of ground water flow is east-northeast.

3.0 SITE AND OPERATIONS INFORMATION

3.1 General Site Description

The subject site is approximately 77.1 acre of farmland and wooded land. A natural gas well is located in the western portion of the subject property. The area immediately surrounding the site is rural with a mix of farmland, wooded land and residential properties.

See Appendix C (Maps) for a site plan depicting the property. Photographs of the site and surrounding areas were taken to document current conditions at the subject parcel and are included in Appendix A.

3.2 Utilities

The subject property is not supplied with public utilities (i.e., potable water, storm sewer, natural gas and electricity).

3.3 Processes and Material Use

The subject property is occupied by farmland or wooded land. A natural gas well is located in the western portion of the subject property.

3.4 Chemical Use and Storage

Chemical use or storage associated with the subject property is as follows:

3.4.1 Cylinder Storage

There was no observed cylinder storage at the property.

3.4.2 Underground Storage Tanks (USTs)

At the time of the inspection, no underground storage tanks were observed.

3.4.3 Aboveground Storage Tanks (ASTs)

At the time of the inspection, an aboveground storage tanks (ASTs) was observed, its contents was not marked.

3.4.4 National Pollutant Release Inventory (NPRI)

Governmental database search reports did not identify the property in any pollution release inventory databases.

3.5 Hazardous and Non-Hazardous Waste Management

3.5.1 Hazardous Waste

At the time of the inspection, hazardous wastes were not generated or stored on the site.

3.5.2 Non-Hazardous Waste

At the time of the inspection, non-hazardous wastes were not generated at the site.

3.5.3 Used Oil

Used oil is not generated or stored on the site.

3.5.4 Off-Site Waste Disposal Evaluation

General municipal waste were not generated at the site, at the time of the inspection.

3.6 Water, Wastewater and Storm Water

3.6.1 Water

Water is not supplied to the site.

3.6.2 Wastewater

There is no wastewater discharged from the site.

3.6.3 Storm Water

Storm water in the area percolates into surrounding soil or evaporates.

3.7 Air Emissions

There are no industrial air emission sources currently at the site.

3.8 Polychlorinated Biphenyls (PCBs)

At the time of the inspection, no visual indications of on-site PCB were identified.

3.9 Visual Indications of On-Site Contamination

Based on site observations conducted for this assessment, no visual indications of on-site contaminations were identified.

3.10 Asbestos-Containing Materials

There are no Asbestos-Containing Materials on the subject site.

3.11 Lead Based Paint

No visual indications of lead based paint were observed.

3.12 Ozone Depleting Substances

There was no ozone depleting substances located on or within the subject property.

3.13 Radioactive Sources

No radioactive sources were observed within the property.

3.14 Vapor Intrusion

As summarized in Section 6, Great Lakes has not identified conditions (RECs) at the subject property and/or at neighboring properties that would indicate a potential for vapor intrusion at the subject property, based on the information contained in the databases reviewed.

4.0 ASSESSMENT OF PAST LAND USE AND OPERATIONS

4.1 General Information

The Schmigel property (Tax Map ID 10.-1-7), is located on Indian Falls Road, in Pembroke, County of Genesee, New York. The subject property includes approximately 77.1 acre of farmland and wooded land. A natural gas well is located in the western portion of the subject property.

4.2 Interviews

At the time of the report an interview has not been completed the current owner. Great Lakes will continue to try and establish contact and conduct an interview. Great Lakes reserves the right to revise this report based on pertinent information that may be received.

4.3 Previous Environmental Reports

No previous environmental reports associated with the subject property were available for review at the time of writing of this report. As detailed below, a freedom of information (i.e., FOIL) request was submitted to the New York State Department of Environmental Conservation (NYSDEC) and the Town of Pembroke; however, the requested records have not been returned as of the time of the writing of this report. The FOIL records will be submitted to Public Properties at a later date under separate cover.

4.4 Evaluation of Historic Information Sources

Evaluation of historic information sources included a review of Sanborn Maps, City Directories, Aerial Photographs and Topographic Maps. All maps are presented in Appendix C, aerial photographs in Appendix B and city directory in Appendix D of

this report. A review of records indicates the subject site has been occupied by farmland and wooded land.

5.0 DATABASE AND GOVERNMENT RECORDS REVIEW

5.1 Government Records Review / Interviews

Great Lakes made a Freedom of Information Law (FOIL) request for the subject property to the NYSDEC and the Town of Pembroke. A copy of this request is presented in Appendix E of this report. Great Lakes reserves the right to revise this report based on pertinent information that may be received in the future concerning any environmental incidents or health concerns related to the subject property.

5.2 Environmental Database Search

Great Lakes engaged EDR, Inc. to scan both federal and state environmental record databases and provide a summary of facilities that are identified on any of the lists searched. A copy of this report can be found in Appendix F. The databases searched are listed below.

The subject property was not listed in any of the databases searched. Table 1 (provided below) lists properties in the surrounding area of the subject property that were identified in the searched databases.

Great Lakes did not identify activities at the subject property or at neighboring properties that would indicate a significant potential for RECs, based on the information contained in the databases reviewed.

Refer to page GR-1 of the Environmental Data Resources report for a description of the databases listed (Appendix F).

6.0 FINDINGS & CONCLUSIONS

Great Lakes performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527 of the Schmigel property (Tax Map ID 10.-1-7), located on Indian Falls Road, in Pembroke, County of Genesee, New York. Any exceptions to, or deletions from this practice is described in Section 6.1 of this report.

Based on information reviewed for the subject site, the property currently does not hold any environmental liens, and there is no knowledge of any past or current violations, lawsuits, or administrative proceedings involving the subject property.

Due to the past land use of the subject site (i.e. farmland), it is recommended that a Phase II Environmental Site Assessment be conducted to verify the presence and the extent of subsurface contamination due to possible pesticide/herbicide application, if any.

6.1 Statement of Information Conformity

The conformity of information collected and analyzed fulfilled the requirements of the standards and practices listed in the regulation and did not impede the ability of the environmental professional to identify conditions indicative of releases or threatened releases of hazardous substances. The long-standing history and use of this property has been well known and documented, therefore, any gaps in information were deemed insignificant.

7.0 ENVIRONMENTAL PROFESSIONAL STATEMENT

"I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of this part."

"I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312."

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Great Lakes Environmental were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- Library of Congress
- University Publications of America
- EDR Private Collection

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
NPL LIENS..... Federal Superfund Liens

Federal Delisted NPL site list

Delisted NPL..... National Priority List Deletions

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State and tribal leaking storage tank lists

LTANKS: Leaking Storage Tank Incident Reports. These records contain an inventory of reported leaking storage tank incidents reported from 4/1/86 through the most recent update. They can be either leaking underground storage tanks or leaking aboveground storage tanks. The causes of the incidents are tank test failures, tank failures or tank overfills

A review of the LTANKS list, as provided by EDR, and dated 08/17/2015 has revealed that there are 9

EXECUTIVE SUMMARY

LTANKS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

NY Spills: Data collected on spills reported to NYSDEC. is required by one or more of the following: Article 12 of the Navigation Law, 6 NYCRR Section 613.8 (from PBS regs), or 6 NYCRR Section 595.2 (from CBS regs). It includes spills active as of April 1, 1986, as well as spills occurring since this date.

A review of the NY Spills list, as provided by EDR, and dated 08/17/2015 has revealed that there are 16 NY Spills sites within approximately 0.125 miles of the target property.

SPILLS 90: Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

A review of the SPILLS 90 list, as provided by EDR, and dated 12/14/2012 has revealed that there is 1 SPILLS 90 site within approximately 0.125 miles of the target property.

DEC Memo: Prior to Sept, 2004 data translation this spill Lead_DEC Field was "CH"Spill originally sent to R9. It is in Genesee County. Bob Corcoran 01/14/99.01/20/99:CH TELECON W/ GARY ROGERS OF TRUCK STOP.HE SAYS TANKNOLOGY IS ON SITE DOING A HELIUM TEST ON LINE TO TRY AND IDENTIFY WHERE THE LINE IS LEAKING. THE SYSTEM, WHICH IS FOR THE 10,000 GALLON MID GRADE GASOLINE, HAS BEEN SHUT DOWN SINCE THE LINE TEST FAILED. TANK IS FIBERGLASS TANK WITH STEEL LINES.CONTACTS FOR TRAVEL COURTS OF AMERICA IN CHICAGO ARE: DAVE PLUMBER AND THE ENGINEER WALLY DOBSON.02/03/99:CH TELECON W/ JIM FROM L&O.HE SAYS DARIEN OSWALD IS THE ONE WHO WORKED ON THIS JOB.JIM SAYS ON JANUARY 28TH THEY UNCOVERED 5 FEET FROM THE SUMP AND DID NOT FIND ANY LEAK. ON 2/2/99 THEY UNCOVERED 25 FEET FROM THE SUMP AND PRESSURE TESTED THE LINE. THE LINED LEAKED, BUT THEY DID NOT SEE ANY LEAKS IN THE 25 FEET THEY HAD UNCOVERED.THERE IS ABOUT 300 FEET OF LINE BETWEEN THE ISLANDS AND THE TANKS. JIM BELIEVES THEY ARE GOING TO UPGRADE THE SITE IN THE NEAR FUTURE SO HE THINKS THEY WILL LEAVE THIS TANK OUT OF SERVICE AND PUT NEW LINES IN AT A LATER TIME.07/2/03: THE DEPT RECEIVES A LETTER FROM TRAVEL CENTERS OF AMERICA IN RESPONSE TO DEPT LETTER OF 6/03 REQUESTING FURTHER INFORMATION REGARDING LINE TEST FAILURE. LETTER REQUESTED REPAIR INFORMATION AND IF REPAIR INFO COULD NOT BE PROVIDED TA MUST PERFORM A SUBSURFACE INVESTIGATION. TA RESPONSE REFERRED TO A PREVIOUS LINE TEST THAT PASSED THE RETEST. THEIR RESPONSE DID NOT ADDRESS THE LINE FAILURE THAT OPENED THIS SPILL. FURTHER INVESTIGATION INTO THE LEAK MUST BE PERFORMED. 12/22/08: REVIEW OF FILE INDICATES ADDITIONAL SPILLS AT THE SITE. SPILL 0105775 RESULTED FROM A LINE TEST FAILURE. AN INVESTIGATION WAS PERFORMED AND A HOLE IN THE LINE WAS FOUND. REPAIRS WERE MADE AND A SUBSURFACE INVESTIGATION PERFORMED. SINCE THE O105775 SPILL WAS SUBSEQUENT TO THIS SPILL, THIS SPILL WILL BE REFERRED TO THE O105775 SPILL AND SUBSEQUENT INVESTIGATION. BASED ON THE INFORMATION IN THE 0105775 REPORTS, NO FURTHER ACTION IS NECESSARY. REFER TO SPILL 0105775 FOR ALL SUBSURFACE INVESTIGATION AND SAMPLING INFORMATION.01/20/11: PAPER FILE REMOVED PER FILE RETENTION POLICY.
Remarks: AN UNDERGROUND TANK WAS TESTED AND SEEMS OK. HOWEVER, THE LINE WAS ISOLATED AND FAILED THE TEST. NO SIGNS OF GROSS LEAKAGE. THE NEXT STEP AT THIS POINT HAS NOT YET BEEN DETERMINED.

Contact Phone: 4408087406
DEC Memo: 03/17/2015: FOLLOWING E-MAIL RECEIVED FROM KELLY GELSKE AT 16:24.Tom,
I wanted to make you aware of an issue we're having with one of the diesel tanks at our Pembroke site. Tank 005 on our PBS Certificate (#3 on our ATG console) has taken on over 6000 gallons of water in the past several days. Our tank contractor, Scott Tyler Mechanical, was onsite first thing yesterday a.m. and found a loose ATG probe cap and assumed this was the source of the water - as you know groundwater in that tank pit is pretty high, and this probe riser in not in a contained sump. With the recent snow melt we thought we'd found the source of the water intrusion. Today we had a pump truck at the site to remove the water. But since removal, water continues to increase in this tank. At one point it was approximated at 1/2" in about 30 minutes. This is fairly significant inflow of water. Scott Tyler was able to look inside a manway into the tank and saw NO evidence of water intrusion at the surface. No visible drips, no audible dripping noises, no ripples on the fuel surface. He is confident that it is not a tank top fitting that is allowing water in, since 1/2" per 30 minutes would look/sound pretty significant coming in from the tank top. The tank is shut down, the site is only fueling on tanks 1 and 2 (numbers on ATG). We are going to test the tanks on Friday. If the test fails i will call the hotline and report a release and we can move forward from there with closure/assessment. Does this sound acceptable to you, or should i report this now as a "suspected release"?03/17/2014: TH DIRECTS KELLY GELSKE TO REPORT SPILL. FILE #1411785 GENERATED.03/18/2015: TH ON SITE AT 10:00 WITH FACILITY MANAGER (MIKE). APPARENTLY, WATER WAS FIRST NOTICED AT 10:00 HRS ON 03/14/2015 WHEN SEVERAL DIESEL TRUCKS DISPENSED WATER TO THEIR SADDLE TANKS. THE TANK WAS STUCK AND 4" OF WATER WAS RECORDED AT THAT TIME. THE TANK WAS ISOLATED AND THE LINES WERE CLEARED. THE DIESEL PRODUCT WAS TRANSFERRED TO OTHER TANKS ON 03/17/2015. APPROXIMATELY 6,600 GALLONS OF WATER WAS PUMPED FROM THE TANK BY EGGAN EQUIPMENT (ROME, NY). 03/20/2015: FOLLOWING E-MAIL RECEIVED FROM KELLY GELSKE AT 17:23.Tom, just a quick update. Our subcontracted tester failed to

keep their scheduled test today and couldnt reschedule until next friday. Here are some updates on what we found today and our plans going forward: 1) Water in the tank pit is down a bit and once it dropped a few inches below top of tank the water ingress suddenly stopped. We're now assuming that the leak is somewhere at the top of the tank. While it could be an actual tank wall leak up high, it's more likely the buried manway seal has rotted and the water was coming in and streaming down the tank walls (which would explain why we heard no drips inside the tank). 2) Scott Tyler excavated down around the vent risers to ensure that there was no damage to the vent piping. Found no evidence of damage, further supporting our assessment that the vent piping is not the source of water into the tank. 3) Scott Tyler will return on Tuesday to excavate the far end of the tank top and uncover the buried manway as well as the vent line entry into the tank. This will allow him to inspect the seal on the manway and replace if necessary. It will also allow him to isolate the vent piping from the tank when we test it (instead of testing the entire tank and vent riser to the top of the riser as one unit). Any other fittings he encounters after removing the concrete will also be checked for potential leaks. All of this construction work is being done proactively here (since we now have time before testing) to try and eliminate as many possible leak points as possible prior to testing. Our hope is this will result in a passing tank test. Rather than fail the test first and then uncover and look for leaks after. 4) On Friday the testers will test the tank. If it passes (assuming Scott Tyler found some obvious repairs during evaluation of the tank top fittings/manway) we will prepare to put it back in service. If it fails, we will have another contractor enter the tank for an internal inspection to see if we can identify the failure point. We will either opt to close the tank in place and assess subsurface conditions, or we may choose to install Tank Tech's Phoenix double-walled tank lining which is approved for use by NYSDEC. I can provide more details if we get to that point. It is essentially a new tank build inside the shell of the old one, and the interstice is monitored with a sensor for leak detection03/27/2015: FOLLOWING E-MAIL RECEIVED FROM KELLY GELSKE AT 15:33:Good afternoon Tom. Not sure if you've been on site today and heard, but the tank tested tight. Scott Tyler was able to uncover the back half of the tank yesterday and located the vent piping where it entered the tank and removed it. This allowed for an isolated tank test rather than testing the entire tank/vent as one complete system. The tank held tight. But turns out the vent piping wont hold pressure at all. So looks like that was the culprit all along and it was groundwater seeping through the surface soil and snowmelt entering the vent piping break/hole that let water into the tank. Scott Tyler will provide me a quote to install new vent piping for that tank and should be able to complete the work next week to get us back up and running.05/20/2015: TANK TIGHTNESS TEST REPORT RECEIVED FROM KELLY GELSKE. TEST WAS PERFORMED BY C.A. NORRIS ON 03/27/2015. TANK TESTED TIGHT. NO FURTHER ACTION IS ANTICIPATED BY SPILLS UNIT AT THIS TIME-CLOSED.

Remarks: Water intrusion into tank # 005. Tom Hall Aware of same.

DIAGNOSING PROBLEM. SAIC (ENVIRONMENTAL CONSULTANT) HAS BEEN CONTACTED.05/07/2013: E-MAIL RECEIVED FROM KELLY GELSKE AT 13:22. A LEAK HAS BEEN IDENTIFIED ON A SECTION OF STEEL PIPING WITHIN A CONCRETE CONTAINMENT/TRANSITION SUMP. THE PRODUCT WILL BE BLOWN BACK TO THE TANK AND THE SUMP WILL BE REMOVED TO FACILITATE REPAIRS. SAIC WILL BE ON SITE TO SAMPLE SOILS AND ASSESS NEED FOR FURTHER INVESTIGATION/REMEDIATION.06/12/2013: CORRECTIVE ACTION REPORT RECEIVED FROM SAIC. THE DEFECTIVE STEEL PIPE SECTION HAS BEEN REPLACED WITH NON-METALIC FLEX PIPE. A NEW SUMP HAS BEEN INSTALLED. APPROXIMATELY 12 TONS OF CONTAMINATED SOIL WAS REMOVED AND WILL BE DISPOSED OF PROPERLY. CONFIRMATORY SOIL SAMPLES INDICATE THAT NO FURTHER INVESTIGATION OR REMEDIATION IS REQUIRED AT THIS TIME. FILE CLOSED.09/26/2013: DISPOSAL DOCUMENTATION FOR 17.27 TONS OF CONATMINATED SOIL RECEIVED IN SPILLS UNIT.

Remarks: Caller advised showing a possible leak in the line at the pump. No fuel has been detected that has leaked out of the secondary containment. Clean up is pending.

NO FURTHER ACTION NEEDED AT THIS TIME BY SPILLS. FURTHER INFORMATION :TRUCK NUMBER 68 (DRIVER: PAUL SCHOFIELD)INSURANCE INFORMATION KENNY PIKE/HARTFORDPO BOX 317HARTFORD, VT 05047POLICY 3144CA000161 EXPIRED 5/28/199904/15/99: TH ON SITE AT 1100 HRS. EP&S IS COMPLETEING SURFACE CLEANUP OF SPILL. AS PER TRUCK DRIVER (SCHOFIELD) THE SPILL OCCURRED WHEN HEAT COILS IN THE SADDLETANK OVERHEATED FUEL CAUSING FUEL EXPANSION AND RELEASE THROUGH TANK VENTS. DRIVER WAS ASLEEP IN THE CAB AT THE TIME. SPILL AREA COVERED APPROXIMATELY 100' X 20' OF PAVEMENT SURFACE. NO STORM DRAINS OR SOILS WERE IMPACTED. EIGHT DRUMS OF SPEEDI DRY AND PADS GENERATED FROM CLEANUP. EP&S FOREMAN (RON HUNTINGTON) WILL FORWARD DISPOSAL RECEIPTS FOR CLOSURE.02/27/07 PAPER FILE REMOVED PER FILE RETENTION POLICY.

Remarks: A TRUCK PARKED OVERNIGHT AT THE TRUCK STOP EMPLOYED A MECHANISM THAT HEATS FUEL IN THE SADDLE TANKS TO PREVENT THE FUEL FROM THICKENING DURING THE WINTER. SINCE THERE WAS A PROBLEM WITH THE STARTER, THE DRIVER LEFT THE TRUCK ON ALL NIGHT, AND THIS MECHANISM CAUSED THE FUEL TO HEAT AND EXPAND OVERNIGHT. THE EXPANSION OF THE FUEL CAUSED IT TO OVERSPILL TO THE GROUND. THE DRIVER IS UNABLE TO TURN THE HEATING MECHANISM OFF. CORFU FD RESPONDED.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 03/26/2015	Source: EPA
Date Data Arrived at EDR: 04/08/2015	Telephone: N/A
Date Made Active in Reports: 06/22/2015	Last EDR Contact: 07/09/2015
Number of Days to Update: 75	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 03/26/2015	Source: EPA

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 03/26/2015	Source: Environmental Protection Agency
Date Data Arrived at EDR: 04/08/2015	Telephone: 703-603-8704
Date Made Active in Reports: 06/11/2015	Last EDR Contact: 07/10/2015
Number of Days to Update: 64	Next Scheduled EDR Contact: 10/19/2015
	Data Release Frequency: Varies

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/09/2015

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers

Source: Department of Health

Telephone: 212-676-2444

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Version Date:	2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

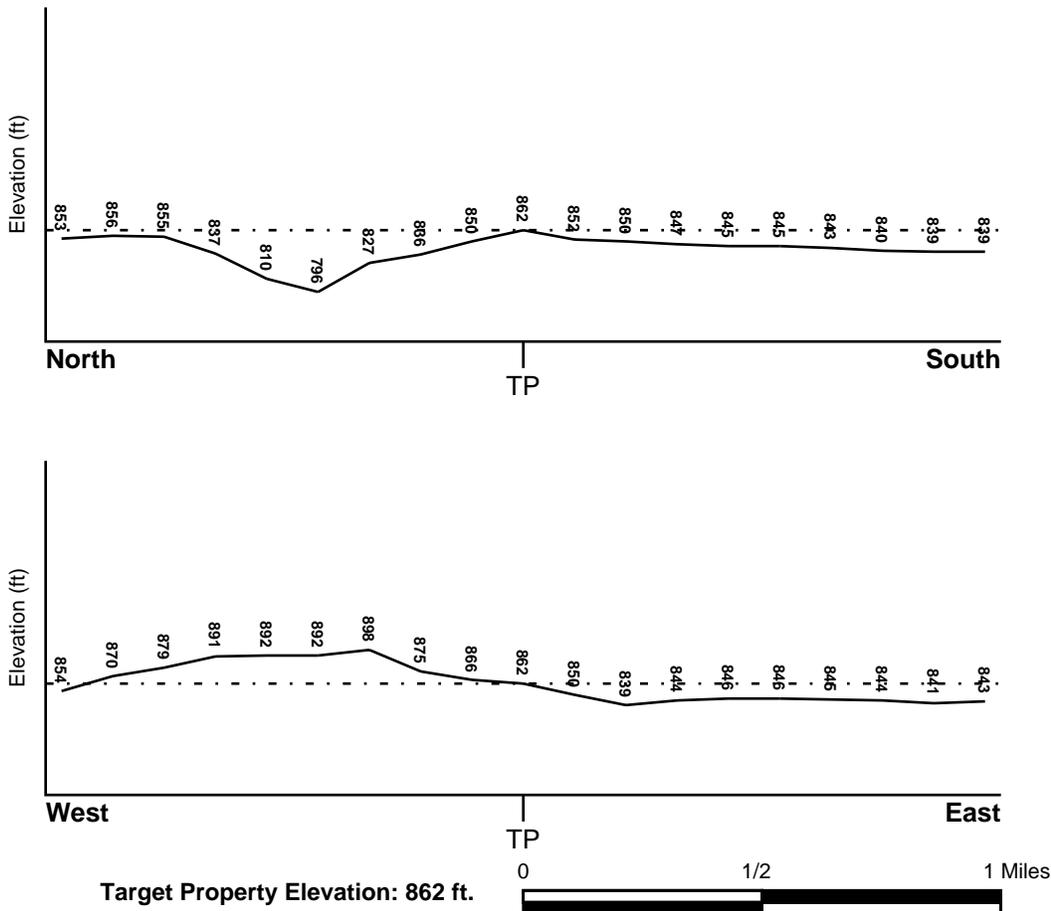

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

Data Coverage
YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Palmyra

Soil Surface Texture: gravelly loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 42 Min: 4	Max: 7.3 Min: 5.6
2	11 inches	29 inches	gravelly clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 42 Min: 4	Max: 7.8 Min: 6.1
3	29 inches	72 inches	stratified very gravelly sand to fine sand	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Clean Sands, Poorly graded sand.	Max: 705 Min: 42	Max: 8.4 Min: 7.4

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 2

Soil Component Name: Dunkirk

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	14 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 14 Min: 4	Max: 6.5 Min: 5.1
2	14 inches	35 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 14 Min: 4	Max: 7.8 Min: 5.1
3	35 inches	42 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 4 Min: 1.4	Max: 7.8 Min: 6.1
4	42 inches	72 inches	stratified silt to very fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 8.4 Min: 6.1

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Map ID: 3

Soil Component Name: Niagara

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 23 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.3 Min: 5.1
2	11 inches	25 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.8 Min: 5.6
3	25 inches	72 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 0.42	Max: 8.4 Min: 6.6

Soil Map ID: 4

Soil Component Name: Lima

Soil Surface Texture: silt loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Moderately well drained

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 30 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 5.6
2	9 inches	20 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 14 Min: 4	Max: 7.8 Min: 5.6
3	20 inches	72 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 5

3	20 inches	42 inches	loamy very fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 7.3 Min: 5.1
4	42 inches	72 inches	stratified loamy fine sand to very fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 14	Max: 8.4 Min: 5.6

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of the ASTM Standard Practice for Assessment of Vapor Encroachment into Structures on Property Involved in Real Estate Transactions (E 2600-10).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Lamson
 Soil Surface Texture: very fine sandy loam
 Hydrologic Group: Class B/D - Drained/undrained hydrology class of soils that can be drained and are classified.
 Soil Drainage Class: Poorly drained
 Hydric Status: All hydric
 Corrosion Potential - Uncoated Steel: High
 Depth to Bedrock Min: > 0 inches
 Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	14 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 4	Max: 7.8 Min: 5.6

EXECUTIVE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
2	14 inches	38 inches	very fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 42 Min: 4	Max: 8.4 Min: 6.1
3	38 inches	72 inches	stratified very fine sand to fine sand	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42 Min: 4	Max: 8.4 Min: 6.1

Soil Map ID: 2

Soil Component Name: Romulus

Soil Surface Texture: silt loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	11 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 4 Min: 1.4	Max: 7.3 Min: 6.1

EXECUTIVE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
2	11 inches	25 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 7.3 Min: 6.1
3	25 inches	72 inches	gravelly silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 3

1	0 inches	7 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.3 Min: 5.1
2	7 inches	38 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 14 Min: 4	Max: 7.3 Min: 5.1
3	38 inches	72 inches	gravelly loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand. COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

Soil Map ID: 38

Soil Component Name: Rubbleland

Soil Surface Texture: loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class:

Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

EXECUTIVE SUMMARY

Soil Map ID: 39

Soil Component Name: Benson

Soil Surface Texture: channery loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 48 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)

RMP: Risk Management Plans

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Search Distance: Property

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

ERP: Environmental Restoration Program Listing

Standard Environmental Record Source: State and tribal Brownfields sites

Search Distance: 0.333 Mile

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

HIST SPILLS: SPILLS Database

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

2020 COR ACTION: 2020 Corrective Action Program List

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.25 Mile

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Standard Environmental Record Source: Other Standard Environmental Records

RECORD SOURCES AND CURRENCY

Search Distance: 0.333 Mile

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

EPA WATCH LIST: EPA WATCH LIST

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: Property

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

Standard Environmental Record Source: Other Standard Environmental Records

RECORD SOURCES AND CURRENCY

Search Distance: Property

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Standard Environmental Record Source: Other Standard Environmental Records
Search Distance: 0.333 Mile

RECORD SOURCES AND CURRENCY

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US BROWNFIELDS: A Listing of Brownfields Sites

Standard Environmental Record Source: Other Standard Environmental Records

Search Distance: 0.333 Mile

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Standard Environmental Record Source: Federal institutional controls / engineering controls registries

Search Distance: Property

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

EDR MGP: EDR Proprietary Manufactured Gas Plants

Standard Environmental Record Source: Former manufactured Gas Plants

Search Distance: 0.333 Mile

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

Standard Environmental Record Source: Historical Gas Stations

Search Distance: 0.25 Mile

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5' minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[®] Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW[®] Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services. The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX G

LIMITATIONS, CERTIFICATION, QUALIFICATIONS

Limitations and Exceptions

The professional environmental inspector has used his or her best judgment and has conducted the ASTM suggested inquiries when conducting this assessment.

This environmental site assessment cannot wholly eliminate uncertainty regarding the potential for recognized environmental conditions concerning the subject site or adjoining properties.

Not every property requires the same amount of site assessment work. Various factors determine the appropriate level of involvement, such as the type of property being assessed, how it is used, the extent of contamination, and the amount and kind of data collected. Any one of these will determine the appropriate level of environmental site assessment.

Not all inquiries will identify a significant environmental condition existing on the subject property. All environmental assessments are governed by circumstances and conditions that existed on the day of inspection.

Influences on Fair Market Value

The presence of environmental liabilities and their associated clean up costs may influence the fair market value of the subject property. Market value is understood to be the most probable price estimated in terms of money that the property will bring if exposed for sale on the open market by a seller who is willing but not obliged to sell, allowing a reasonable time to find a buyer who is willing but not obliged to buy, both parties having full knowledge of all the uses to which it is adapted, for which it is capable of being used, or for which it has been used.

The environmental assessor assumes no responsibility for any changes in the fair market value of the property that might result from the performance of the environmental assessment activities, or disclosures of environmental conditions relating to the property.

Certification of Inspection

The environmental inspector certifies and agrees that:

- (1) The inspector has no present or contemplated future interest in the property inspected.
- (2) The inspector has no personal interest in or bias with respect to the subject matter of the assessment report or the participants to the sale. This Environmental Site Assessment Report is not based in whole or in part upon the race, color or national origin of the prospective owners or occupants of the property inspected, or upon the

race, color or national origin of the present owners or occupants of the properties near the property inspected.

(3) The inspector has personally inspected the property and has made an exterior inspection of all neighboring properties in the report. To the best of the inspector's knowledge and belief, all statements and information in this Site Assessment Report are true and correct, and the inspector has not knowingly withheld any significant information.

(4) The legal description and address furnished is correct according to the information furnished to the inspector.

(5) This inspection report has been made in conformity with and is subject to the requirements of the Code of Professional Ethics and Standards of Professional Conduct of the environmental organizations with which the inspector is affiliated.

(6) All conclusions and opinions concerning the subject site that are set forth in the Site Assessment Report were prepared by the inspector whose signature appears on the Assessment Report.

General Qualifications

In the professional judgment of the site assessor, the scope of this investigation was sufficient to determine whether further investigation was warranted, given the nature and specific circumstances of the site. The site assessor performed this Phase I ESA in conformance with the care and skill currently exercised by reputable environmental consulting firms practicing under similar conditions in the state of New York. No other warranty or representation of any kind, expressed or implied, at common law or created by statute, is extended, made or intended by the site assessor's rendering consulting services or furnishing oral and/or written reports of its findings.

The site assessor has no obligation to any third party who intends to, or will, rely on this report and specifically disclaims any such responsibility. The site assessor assumes no obligation for reporting any facts revealed by the environmental site assessment or contained in the Phase I ESA report to anyone other than the Client.

This report does not constitute legal advice, nor does the site assessor purport to give legal advice. Environmental conditions and regulations are subject to constant change and reinterpretation. It should not be assumed that current conditions and/or regulatory positions will remain constant. Furthermore, because the facts stated in this report are subject to professional interpretation, differing conclusions could be reached by other professionals.

Certain information contained in this report may have been obtained from agencies or through personal interviews. The site assessor cannot warrant that such information is

accurate. Except as discussed in the report, the site assessor has not verified the accuracy of such information.

Contaminates may be hidden in the subsurface materials, having been placed there due to the actions of man, or covered by foliage, water, snow, concrete, asphalt, or other materials. This contamination may not be present in predictable locations. The most that the site assessor can do is formulate a logical assessment program to reduce the client's risk of later discovering previously unknown contamination; the greater the extent of exploration on a property, the greater the probability of finding contamination, if present. Even with extensive exploration, it is not possible to say with total certainty that contaminants are not present at a particular site.

Many environmental assessments are undertaken to satisfy the "due diligence" requirement in the federal Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and appropriate state requirements. The level of investigative work required to demonstrate "due diligence" has not been legislatively defined by Congress, the U.S. EPA, or appropriate state bodies. Although the site assessor strives to investigate each site to discover all possible sources of contamination, the site assessor cannot warrant that the work undertaken for this report will provide a due diligence defense asserted under CERCLA, or any other federal, state, or local laws.

No warranty can be made that conditions observed were representative of areas not observed. Tests or data collected for this report were obtained only for the purposes stated in this report, and should not be used for reasons other than those intended.

The inspector assumes no responsibility for legal issues affecting the property inspected, nor does the inspector render any opinion as to the marketability of title.

Unless arrangements have been previously made, the inspector will not be required to give testimony or appear in court because of having made the Environmental Site Assessment with reference to the property in question.

Possession of this Environmental Site Assessment Report does not carry with it the rights of publication, and any parts thereof may not be reproduced in any form without written permission of its writer, or the client who ordered the report.

The inspector assumes that there are no hidden or latent conditions or defects on the property, subsoil, or structures that would render it more valuable, less valuable or hazardous. The inspector assumes no responsibility for such conditions or for the inspection, engineering, or repair that might be required to discover or correct such factors.

Information, estimates, and opinions furnished to the environmental inspector and contained in the report were obtained from sources considered reliable and believed to be true and correct. The inspector however, assumes no responsibility for the accuracy

of such information.

This Environmental Site Assessment is not intended to (but indeed may) have a direct effect on the value of the property inspected. It is conducted solely for the educational benefit of the principal parties.

The contents of this report, including any conclusions as to value or hazards and the identity of the inspector shall not be disseminated to the public through advertising media, public relations media, news media, sales media, or any other public means of communication without the prior written consent and approval of the environmental inspector.
